Anyone know if most Hams are anything like N8wwm? Because I don't want to waste my effort to get a license, or the money to buy a ham rig if they all are like him/her. I just started visiting this ng and others lately because my buddies are trying to talk me into Ham. I may as well stick to CB if Hams are like this person, I already have the equipment, and the people seem nicer/smarter than this "ham".

2. HR-2346 (local CB enforcement) Fines??

Newsgroup: rec.radio.cb
Date: 2000-12-01 00:00:00 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3A27619E.22EAE3F6@sccoast.net>
Source record: 61443

I was just wondering something about HR-2346? Since this allows local legislators to write laws based on FCC regulations, will that include the forfeiture amounts spelled out in the FCC regulations? In other words, are we talking about local courts handing out fines up to $20,000 for each rule violation? If so, that will certainly encourage local law enforcement officers to go after CB'ers with a vengeance (there are very few $20,000 speeding tickets).

Thank you gentlemen,
This was indeed the reason why I wrote the "Top Ten" list above. For some reason none of you mentioned my point of view concerning the role of (at least) some rules that should (in my opinion, that is) be followed in radio communication: the name of this newsgroup is NOT "rec.radio.freebandcb" - it's "rec.radio.cb".
With this I am trying to defend the CBers who have their legal rigs, antennas etc. - the people who simply enjoy talking on the radio, chatting with people, developing their skills in understanding propagation, feedlines and such. That must be the reason we have a thing called Citizens' Band. Those are the kind of radio hobbyists who suffer from the negative public image of CB radio - they do not use illegal equipment, excessive power - they lead nice and decent conversations on their channels. Which, needless to say, I find a very, very good hobby. I see very little difference between their interest in radios and the interest of hams in theirs. Besides, many hams have legal CB rigs and like working there. We just can't use our callsigns there (at least in my country) - that's why my handle here is "Karppi", when I take a CB mike.
Let's not let the bad apples ruin the whole basket.

73, Gary

On or about 01 Dec 2000 04:09:04 GMT, n8wwm@aol.com (N8wwm), using the
forum rec.radio.cb did say:

:I am not a guest here at anyones behest. Nor are you. Whoever operates this NG
:can dust me if they want. And, yes I did post on another NG about the whining
:here. So? It IS whining. Period.
:
:Something about the anti-free speech attitude here smells funny.
:
:Aside from that, I am not the one who brought the QRZ article up in the 1st
:place. I posted it without comment.
:
:By the way, if you don't like my attitude you dont have to read my posts.
:
:I relish slam dunking people who do not know whereof they speak. So what? Big
:deal. If you get your panties knotted over my words then don't read 'em. That
:goes for everyone.
:
:

This sounds somewhat like a "conversation" I heard on Channel 19
yesterday morning... screwey grammar, improperly used vocabulary, and
all...

Are you sure you're not a CBer who got his peepee whacked, so went and
got his ticket so he could feel some sense of superiority for once in
his life?

Go home, Doug. Your particular brand of drivel (that of stirring the
pot, then calling others in to watch the fallout) is not wanted here.

Oh, as an FYI to the rest of the world, note the city this guy is
from... Now everything makes sense...

Message-ID: <fpof2tci6r1g7n3jlulit5ag892kgn2qdu@4ax.com>
Source record: 61451

Greetings!

Yikes! A 1969 is not a "stock" final...ulp...

Ok, read thru this then decide...it is a long one to help direct you to make the right decision. [no flames...]

Hmmm...if you want to keep the final that is in it, use a larger wattage rating on that bias resistor. I'm thinking that you're currently running a 1/4W value back there. Upping the wattage value to 1/2W or so should suffice. BE SURE TO USE CARBON COMPOSITION types - sorry to yell but it's important. It's always a good idea to increase the wattage of this resistor to help out the upgrade.

The 22ohm resistor value can also be changed. But what actual value varies. It all depends on how the output network is designed, and what type of coupling is used. [I'm telling you this because I've worked on many designs and have taken derivatives of those to others - I'm trying to sum them all here to help you.]

Some networks use a 3-coil PI filter network. The center coil is like a band-pass - it will have a capacitor strapped across the coil using a foil trace. The 3-coil networks use low capacitance [220pF 180pF 270pF or 330pF] while the "two-coil" and cheaper [read: bloodier design] use 390pF [marked 391]. You can spot these better 3-coil PI boards simply due to the "extra coil" along with a small value cap in there. The value of the cap can vary between 22pF to as high as 33pF.

Since Uniden uses an insulated Positive and Negative ground electrical power system - they pretty much have made the 3-coil PI filter a standard.

[I'm telling you the above because a small adjustment in the output network can have a big impact on the Final and the amount of heat it will generate.]

In a typical Uniden radio, the final used a 2166 but the bias resistor was around 10~15 ohms depending on what type of driver it had, and the circuit design used to "match" it together. [Some used the direct coupled capacitor design, others used cap/coil in series]. The ferrite bead was also a "particular" type too - only so much permeability which affected the inductance. Even resistor lead length and diameter will change the outcome of this section.

I have made changes to the Resistor/Ferrite bead combo by simply soldering a 15 ohm resistor in series with a 6.8uH

inductor just to get around certain problems. A 68~150 ohm
resistor with a 6.8uH choke soldered in Parallel [straddle]
across the resistor can work too.

Each one has pluses and minuses. Take your pick.

You may have another option, that is the resistor used in "series"
with the base lead. It can be used as the "fudge factor" when you use
a final that is different from the original final. It's original
design helps limit current [affected impedance "seen"] applied to the
base, with one source being the input from the preceeding stage, the
other a reference to ground.

Remember, when adjusting the input to the Final you are also
adjusting the output impedance of the Driver. There is a fine
line of balance here. Change one, it affects how "hot" the
other gets.

This "base" resistor is the one that connects to the [component side
up with transistor face facing you] leftmost leg, or the Base of the
transistor. This value varies amongst models, and can take off some of
the problem that you're having with the 22ohm bias resistor.

Although both work together, one is in series and offers
impedance change, while the other, 22 ohm, is used in parallel
to make the design operate within it's class and offers the
base region a "Window" for linear range of conduction.

The base resistor is a small value, like 2.2 ohms [red, red, gold] and
is found in a lot of radios using the 2078, but I have been seeing
some radios that change the value of this resistor to 5.6 ohm [green,
blue, gold], or 6.8 ohm [blue, grey, gold] and are at 1/2 watt
ratings. The values you can substitute range from 2.2, 3.3, 4.7, 5.6,
6.8, or [rare] 7.2. - using this as a guide, bump up the value of the
base resistor one time on the scale [2.2? use 3.3] and check for heat.
Pretty soon you'll find the value you need.

I know what you're up against with using the 1969. In my own
experiences, the bias resistor can be left alone, and you adjust the
base resistor value.

Another trick is to use a 4pF cap strapped across the collector
[center lead] and base [left lead] on the Final. It acts as a NFB to
help reduce excessive drive and I highly recommend this little trick
to help clean up TVI problems.

Just remember, that all of the above tricks will reduce power output.
So the decision is your's to make. Unless you're into total re-design,
some sacrifices have to be made in order to keep this working.

They'll learn REAL fast though once the harrassed hams start taking
them to court. They'll HAVE to be a lot more careful soon enough. Hams
have nothing to worry about if they run legal, which most do. It's the
illegal CBers that have to start worrying.

No, check your facts. there are 3 license classes now...Novice and Advanced are eliminated. Novices could only run 200 watts.
All other classes of license can run max power on any band they are licensed to operate on.

At the time (1958 or so) FM meant 15kHz deviation in 50 kHz channels so the reason CB is not FM is that it would not generate a serious number of channels. The work on narrow FM was in the future. A good part of the 26-28 spectrum was FM left around from WW2 Jeep radios and the like. Aside from producing a major cluster exercise on the same channel, there is nothing keeping FM from being used in the spectrum because it is now commonly done in narrow channels although 10 kHz channels limit deviation to 2 kHz which is not the best.

There is to my knowledge nothing in the treaty to prevent it. CB is Land Mobile which generally leaves nations and groups of them to their own devices. Most times the only times the treaty gets involved in emission types is where some serious damage could be done to spectrum usage. There may be some additional rules in ITU region one (Europe and Africa) but I doubt it.

I think the Brits use FM on a funny offset mostly because it is a receiver dependent system where power mikes and over-deviation merely cause the user to be totally unintelligible.

Perhaps you , as a cop , need to be informed by a federal mandate called PBR-1 stating that States and Citys must "Reasonably Accomodate " amateur radio operators.
Several cities have lost their ass to this mandate and by bullying amateur operators and in the end , the cities payed all legal fees and city officials usually immune to procesicution nornally were warned that they could be held personally responsible and nearly served time for their antics.

And I will be more than happy to take the ignorant bubba cop to court
and make an ass out of him!

>

>
> The cop says "Tell it to the judge!", writes the Ham a ticket and gets
> his buddies down to help tear the Ham gear out of the vehicle.

And he will be paying for all damage done including replacement of any
and all equipment removed.

Or if the
> cop is lazy, he doesn't even write a ticket. He just calls the gear
> "illegal CB equipment".

He will also have a problem when I report the seizure of said equipment
thru channels to Department of Defense. Some of my mobile equipment
doesn't belong to me, but is USAF equipment purchased with DOD funds.
Imagine their horror when DOD/USAF Investigations Division pays them a
visit! Part of that equipment is charged out to me on a DOD-type docu-
ment. Start "confiscating" military equipment and there'll be hell to
pay!
> Now, what can the Ham do? His only recourse is to go to civil court in
> an attempt to get the gear back.

And, that I would do. Under the circumstances, the law is on my side,
and they will be paying every penny I can legally extract. There are
too many issues, too many variables for local, non-electronic under-
standing cops to keep from getting their own butts in hot water. Yes,
it would be very inconvenient to have to go to court, and would tick me
off BAD--which is why I'd do everything I could to get back at them in
court. OTOH, it might be funny to watch 'em squirm under the scenario
I quoted above.

I STILL say to the hams that think this is so cut and dried, and you
are "exempt" from local enforcement, this is going to cause trouble for
innocent CBers and licensed hams alike--legal or not. You are NOT

exempt from the ignorance of untrained LEOS, nor are you exempt from LEOs with "I am the law, boy" attitudes. The job of enforcement belongs with FCC where the training in comm. law, locating offenders, is (should be). They should've given the money back to FCC and let THEM do the job. This way, at least, offenders would be subject to consistent laws and not the vageries of local statute, incompetence (in radio), and who know who down at the station. It is a bad thing, which, I fear, some of you who are snickering up your sleeves may find out later.

No, it's called full break-in or QSK cw. It has been around since the 30s. If an op misses a bit of copy, he mashed on the dah part of his 'bug' and the transmitting station stops. The receiver sends AA (all after) and it goes on from there. You can hear between the dits and dahs.

It is a feature on a lot of Ten-Tec gear. Similar effects can be had using the VOX feature on cw for semi-QSK operation.

Laws are a necessity for the good of society as a whole. It cannot, however, satisfy the wants of everybody. They are also necessary to prevent the majority from running roughshod over the "weak" which would amount to mob rule.

>
> It's not likely you will ever see a cop squirm in court.

If the situation I described in the original post came to pass, I assure that, not only the cop would squirm, but his chief and the city/county/state authorities. Have you ever seen DOD/USAF CID in action? I have! I spent quite a bit of time in Logistics and dealt with them. I SAW investigations where materiel was mishandled, misappropriated, or stolen. They have NO mercy! Don't think a cop would squirm having ilegally confiscated or damaged a piece of military gear? OH! But he will! He will! Trust me, he will---all the way out the door to the unemployment line! LOL! And it would be a pleasure to see!

Mike,

Measure the voltage across the varactor diode used in the PLL circuit at lowest and highest lock freqs. Then look in the Mfg specs for varactors that give the highest capacitance change within these ranges. It is also possible to parallel some of the IF cans with unused windings to increase their effective range. Capacitor coupling between stages can be improved via trial and error paralleling on bottom of PCB. Longer or shorter ferrite cores can be subbed in VCO tunable "can".

The easiest way to get it stable as a transverter host would be to change the mixer crystal to one in the range of the output IF needed for the xverter.....

It means you splash 20 or more channels up or down from the channel selected,interfere with tv sets in the neighborhood.It also means that the operator of such a radio is self centered,ignorant,has the intelegance of a house plant and probubly cheats playing solataire if they think no one is looking.:)

Not even close..... Facts really do count, here as well as everywhere else

David KD4NUE

See below:

The ARRL Board is reportedly going to reconsider its position on
Morse testing at the upcoming ARRL Board meeting in January ...
now is the time to make your views known! Please write or e-mail
your ARRL Director (even if you're not a member) and help to bring
about a reversal of the long-standing ARRL policy in favor of
maintaining Morse testing as a requirement in the ITU Radio
Regulations!

TALKING POINTS FOR LETTERS TO ARRL DIRECTORS & SECTION MANAGERS

Very politely, but firmly, state your beliefs in the following
manner, but in your own words. Please, Please, do NOT flame your
ARRL officers, directors, or section managers. Flaming or a
sarcastic or antagonistic approach will not be the persuasive
arguments we need to convince them to change the League's
position on the Morse cw testing matter. If fact, it will
probably have exactly the opposite effect desired, and hurt our
cause with the League.

Start with a short paragraph introducing yourself; who you are,
how long you've been a ham, and how long you've been a League
member. (If you're not, you might mention that the issue you're
writing about is one reason you've chosen NOT to join the ARRL so
far. However, since they claim to represent the entire amateur
community of the United States, they should include your input
equally with that of League members) Then continue in your own
words with discussion of the following talking points:

1. You've recently become aware that the ARRL Board will discuss
revision of it's long-standing policy of supporting Morse cw

testing as an international treaty obligation at it's January 2001 meeting.

2. You're extremely disappointed that the League was the only member society to vote "NO" at the recent Region 3 IARU conference in Darwin Australia on elimination of S25.5 from international regulations. This vote was made despite the fact that the League's own 1996 opinion survey for WRC99 showed that only 38% of the amateur population wanted to retain an international treaty requirement while a majority of 52% favored allowing each country to decide for itself whether Morse cw tests were appropriate, with the remaining 9% having no opinion.

3. Morse cw is still a viable mode of choice, but only one of many for amateurs in the world today.

4. There are many new digital modes which offer similar characteristics to Morse cw in terms of narrow bandwidth and signal to noise performance. However, no pass/fail licensing tests are required for any of them, except Morse.

5. There are no logical reasons why personal skills in Morse cw are needed to be a successful amateur operator, on any band. Operating skills are useful, but they do not have to involve Morse cw.

6. Knowledge of Morse cw is no longer a useful supplementary skill for voluntary monitoring of international distress communications. Nor is it used to any extent in local emergency communications. Even the US military has abandoned use of Morse cw for any of its primary communications links. (MARS has also abandoned all Morse CW nets)

7. The requirement to learn Morse cw, and pass a pass/fail examination, is still holding back amateur communications today, even with a 5 wpm test. Learning Morse cw is viewed by many, especially younger people, as an archaic symbol, not consistent with modern ham radio technology.

8. The FCC recently re-stated in its R&O on NPRM 98-143 that knowledge of Morse cw is NOT an indicator of the quality of an amateur radio operator. They also made it clear that the ONLY reason for keeping a minimal 5 wpm test was to comply with the international treaty (S25.5).

9. State that in summary, you, as a League member (or non-member) want the League to change it's position on mandatory Morse cw testing in the ITU Radio Regulations (a treaty).

10. Sign with your name, address, callsign, and e-mail address.

Thanks for helping to influence the ARRL position on this.

Hello Andy: How are ya ah doing there old friend.

Yes the scanner is a treasure itself. I keep an ear on all the locals. Got a new design idea for a scanner antenna, half discone and half broad band dipole. We'll see, ah! Its almost built.

I let everybody know you said hello and ah big howdy. Yes Big Bob is supposed to get out in January 2004. And he is ah vouwin to make a much bigger linear this time. You know the story.

Welfare Clare and Mojave Desert Don are ah gettin hitched tomorrow over at the church, over near the reckin yard. Preacher Sam is ah going to marry em up, and the ceremony will live on channel 12 AM, starts at 10 AM Local Mojave Desert Time (LMDT) All there kids will be there. Major Tom said he is ah trying to get a stealth bomber to do a fly over. Bring your truck polishin off rag incase it does fly over and dump a lot of jet fuel gas, for ah free truck polish. Mc Cartin and Mc Carthy will be there as bouncers, part of the parole conditions, they won't be drinkin like last time.

The reception will be over at the "Dew Drop on INN". Doors open at 11 AM LMDT. Free Beer and spirits, and a very nice lay out of food from Daves kitchen and dinner.

Slide on down to the desert and make ah showin. CB Channel 12 AM will get ya directions. Don't tell anybody ya got cash.

Jay in the Great Mojave Desert, ... just down the road ah ways from he fillin station.

Well this is the way i see it. The FCC can not look after all the ham bands they have now that is the reason they give up 11 m a long time ago. And you stop and think about this If the hammies got the band back what would they do with all the cbr's on it. As it stands there is more people on the 11m band than you think. And what will you do with all the mexicans on the band that dont care about you or me or what we think they talk regardless . I think it is crazy if the FCC is looking for a fix on the 11m band they need to give more channels to the cbr's so we don't have to run 2000 watts to talk over the other guy just to get to talk . You stop and think about it the 11m band has 40 channels the hammies have hundres of channels to talk on so what gives. now you won't the 40 we have back I think it is a bunch of shit myself. And i think we are blowing this all out of wack the more we talk about this the more bull gets started!!!! I am off the key now so have a nice day Georgiaboy753 Westcentrol GA

47. Re: HR-2346 (local CB enforcement) Fines??

There are very few $20,00.00 fines. Always been a warning first. But, with revenue as an inducement, harassment will run wild.

I don't think hams have to worry about this much, Jerry. They are specifically excluded, and while most cops may not know much about ham radio, they do know that it exists. Besides, there is the FCC license to remind them that ham radio is somewhat different than CB.

If I remember correctly, the maximum amount in this state for a misdemeanor is something like $35k (its been a long while since I've seen it), so $20k is certainly within that range. However, I agree with you that the fines are not likely to be anywhere near that high. But, if a town wanted a revenue generator, it is at least possible to see some serious fines involved.

And what would you do with the authorized users of these frequencies.
These frequencies (27.405 - 27.995) are used by the military
(operations, pulsed radar, etc.), the Coast Guard (hurricane emergency
nets, unit coms, icebreaker operations, etc), NASA (low horizon digital
telemetry), and many others.

The bandplan has not changed, and the power limits you allude to are still
correct. On the 10.1 to 19.150 the power is limited because it is a shared
allocation.

Actually, they DON'T quite need a warrant.

It's a gray area, but under the law, IF you have a FCC
HAM license, and IF the complaint is about the operation
of that FCC licensed HAM station, the FCC DOES have
the right to do an unannounced 'station inspection'.

I'm not saying it's write or wrong, or even hold up under
serious legal challenge, but they DO have that rule when
you accept your HAM ticket...

Hey, it's like the BATF and gun dealers. If you're an
FFL license holder, the BATF can do a 'site examination'
at ANY TIME during your posted business hours of
your business site. Attached home, or sell from your
house? Be ready to open your doors! And you HAVE
to declare 'business hours' to get your FFL, even if
you're only 'contract sales' from your home.

Mike

>various frequencies below 27.960 also.

I'm betting that you were hearing the Russian "over the horizon" radar.
It follows the MUF (maximum usable frequency) up and down the entire HF
spectrum with computer-controlled frequency agility. Years ago, they
had a similar system that was referred to as the "woodpecker". It was
so strong and so annoying that the ham gear manufacturers actually added
a second noise blanker circuit to their rigs just to combat it. Russia
dropped it many years ago, but apparently they've come out with a newer
version that's cruising the HF spectrum today. I hear it on 20 meters
all the time. Nothing you can do about it, except live with it.

81. Sonar CB question, and parts needed

Newsgroup: rec.radio.cb
Date: 2000-12-01 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <cCOV5.25$mz3.270@dfw-service2.ext.raytheon.com>
Source record: 61572

Here's a quirky little question for the Sonar experts...

I just picked up a Sonar tube-type CB rig. I thought at first that it was a Model "E". Upon closer inspection, however, I've noticed that it may not be. The silk-screened name on the front panel has had the "E" carefully retouched to be a "C", and the manufacturer's serial number tag on the rear panel, which is an embossed metallic label, clearly states that the set is a Model "C". I've never heard of a "C", and there's no listing of a Sams Photofacts for a Model "C". It looks for all the world like an "E", inside and out. Any ideas? The radio is really in great condition cosmetically, and has definitely not been repainted or relabeled in any way. Yet another oddball...

As for the parts, I need a knob for the channel select switch, an original Sonar hand mic, and a copy of the owner's manual (for a Model "E", I presume).

Greetings!

You'd have a high ripple - almost AC. And depending on the type of
rectifier circuit, a 120 cycle AC buzz.

Just means the regulator quit, and you'll see peaks of close to 36
volts on some supplies.

Greetings!

If memory serves correctly - it's a Pi-network filter section. See if there is a some type of loading resistor on the output before the amp. The high wattage resistor could have blown, causing excess voltage to appear. If none exist, you might want to protect your efforts by investing into something like a ballast resistor of considerable wattage to help loading and prevent spikes that can take out the power supply.

The "Smoke" from the first time probably came from the failed cap that when the resistor quit [a cap can fail like this too] or the transient voltage spike caused the caps to exceed their recommended voltages for a brief moment - the coil saw one of the caps as a dead short to ground and put all the current it has thru the windings into that failed cap. The spike can also travel to the rectifier circuit and cause a diode to fail. If the diode shorted, it's passing nearly AC pressing the other diodes to work against the diode. If it's open it's causing the other diodes to work harder to pass current.

A loading resistor should be in there, to load the caps and help reduce ripple.

The power supply effort is nothing new, the RF transistors can work with supplies that have high ripple. Just as long as current is available to supply whats needed - the voltage load simply drops to a working value. You can test this when you key the amp - you find the voltage with drop to a steady level, thats the working voltage of the power supply.

The only problems with this type of supply is the high working voltage "kick" that drops off - causing a spike to appear at the RF terminal that is full of harmonics for a brief moment. That spike also works backwards into the recitifiers thur the PI-network filter.

Greetings!

On 30 Nov 2000 20:10:07 GMT, while the modem was pondering it's navel,
n8wwm@aol.com (N8wwm) dissertated the following:

:+> ...[...]... I did not make the law, I did not even know it was
:+> in the works. I do support it.
:+>
:+> This is too simple, fellas...It is a law. It helps to protect the public
:+> good.

Then quit crying - you're behind the times here.

:+> You can get an amateur license and run 1500 watts on any band you are
:+> licensed for. That is the provision that is made for radio enthusiasts.

Ahemn...what class? 1500W is not for everybody...don't make a
GENERAL statement like that.

:+> Everything you have said about "what if this, what if that" is based on
:+> the idea that hams are included in this law. That is an incorrect
:+> supposition. A legally operating amateur station is exempt.

If you're on the CB band, or out of band, no license will protect you.

As the sole operator, you are responsible for the emmissions that the
station produces, that includes being the cause of unwanted
interference.

You're in a corner bud, back off.

Regards!
:+> Andy <+:

Greetings!

Any changes to that section?

The final can either be a 2166 or a 2078 - if it's a more recent
vintage, I've seen 2078's used. What kind of a Final is back there?

If that 22 ohm resistor is getting hot, there is DC getting into the
Base of the final in a way that's causing the 22ohm resistor to heat
up.

Thats why I have to ask if there has been any changes to either the
Driver or Final circuitry. Even tweaking the output network can affect
that Bias resistor on the final.

On Thu, 30 Nov 2000 22:51:25 GMT, while the modem was pondering it's
navel, "Major Tom" <ground@control.com> dissertated the following:

:+> I need some help, I have a pc 76xl the 22 ohm resistor, at the back of the
:+> radio to the left of the final is getting extremly hot, i have changed the
:+> final thinking this was the problem. But it still heats up any ideas as to
:+> whats wrong with the radio. Perhaps this final is bad? Any Help appreciated
:+>

And that's why I oppose this thing. They may not have authority over hams, BUT fines would encourage them to *try* to pop people. And that would lead the bubbas to go after hams because, as far as radio is concerned, most don't don't know sh** from shinola!

Hello Andy, I don't see any changes back there, the final is a 1969 i
replaced the original with another 1969, i also replaced the original 22 ohm
resistor with 2- 10 ohms tied in series which should be no problem I will
see if i have a 2078 or a 2166 and try to replace it with that one unless
you think it is something else.

Scott,

I think the reason that we don't have FM is that that is also determined by international treaty. I brought that up regarding another agency that operates near 27MHZ and that was what I was told. I know that some other countries (England?) have FM, but I don't know how their operations are affected by said treaties. Anyone else have accurate info?

Jerry

Hey here in Cleveland, they track em down and take their stuff.
Hams are exempt but still must face federal querrys if there is interference or
are placed on evening hours .
Any good ham is able to seek advice to eliminate interference.

Newer equipment is now being CE certified for susceptability to interference and
those problems will subside once the older equipment is replaced.

Since this law will have to be implimented by local ordinance
it would make this a misdenenor(sp). As such, any fine for
violation of this local ordinance would have to comply with the
local fine structure. That means that if your fined $50.00 for
a speeding ticket, I seriously doubt if the fine for RFI would
be much more than that, or at least ~not~ in the $20k range. I
think people should start being a bit more realistic...

Yeah but the point of "preaching" the word of legalities
goes a little too far. I and a couple of others have been out
here long before windows or Mac was the way to talk, it
was Unix. Then when some one said, "But Linears are
illegal" we said "OK", and that was that. But now a
days some people including you, bring it upon yourself
to hold a holy crusade to rid the world, and show the wrong
doers there misdeeds. Yup, just keep typing, "Hollingsworth
is gonna get you", "Good, now things will be like it was in
the olds days" Really?
I don't know about you people, but this has been a hobby
of mine since the late sixties, Yup, that's right, over thirty years and
well before then. I remember as a kid going over to my parents friends
house, watching him talk around the world on his radio equipment. His name
is Bill Orr, that's right in the early part of that decade and still, too
this day he is considered a good friend of the family. I have listen to the
same rhetoric, FCC is cracking down, CB'rs are no good, Hams are evil, it's
all bullshit. It comes and goes, but people making trouble here and on the
air, will always be around.
Good luck on cleaning up the world of speeders, linears,
illegal radios, high watt head light bulbs, loud exhaust and
all the rest of the small crimes in the world today.
Boy the Holocaust must have paled compared to the
hampered life of all the radio operators in the world.

The Landshark

Yes Doc you are correct.No CB'er or ham is licensed to operate there. Therefore they would not be exempt from the law if they did.

Hi Fred
I almost want to laugh, but to tell you the truth, I truly do worry about you. Towns don't need to write new law. It will be treated as a nuisance. Much like some one playing loud music, or junk cars park in a front yard. If this is truly going on in your town, I would like to know why? Do you have rapid cb'ers doing great harm to the citizens, or maybe they just have a whole lot of time and money to waste? I would realy like to know. Please enlighten me.

License or no license they still need a warrant. But the majority of
hams will have no problem letting the officer in to see their station.

It's the illegally CBers that will crap their pants and give the cop a
hard time.

N8wwm <n8wwm@aol.com> wrote:

: I am not trying to do anything but present an opinion in a logical fashion. You
: just do not agree with it. I did not make the law, I did not even know it was
: in the works. I do support it.

: This is too simple, fellas...It is a law. It helps to protect the public good.

Well, at least it is probably meant to help protect the "public good". There are many laws in existance that don't do that, or are abused in a way that they don't.

: You can get an amateur license and run 1500 watts on any band you are licensed
: for. That is the provision that is made for radio enthusiasts.

With limitations based on license class and frequency of operation.

: Everything you have said about "what if this, what if that" is based on the
: idea that
: hams are included in this law. That is an incorrect supposition. A legally
: operating amateur station is exempt. Therefore, your arguement is invalid.

It is supposed to be exempt. If the police attempt to enforce any new laws without expert amateur help - then Hams are very likely to have unpleasant encounters with the police as well.

For example: An officer is sitting in his car at the local doughnut ship doing some serious sugar/flour dipping, when a Ham drives up and parks next to him. The Ham is talking on his HF rig, and the signal level causes RF overload or desense of the officers UHF radio.

The officer chokes down the rest of the doughnut and coffee, then charges over to accuse the Ham of "interfering with police communications". The Ham tries to explain that he is a Ham operating perfectly legally and the problem is due to the very close proximity of the two radio sets.

The cop says "Tell it to the judge!", writes the Ham a ticket and gets his buddies down to help tear the Ham gear out of the vehicle. Or if the cop is lazy, he doesn't even write a ticket. He just calls the gear "illegal CB equipment".

Now, what can the Ham do? His only recourse is to go to civil court in an attempt to get the gear back.

: You may insult me or anyone else who thinks like me 'til the cows come home, it
: won't change the truth. If you are operating a legal radio on a legal band,
: with an amateur license or in the 40 CB channels, you are exempt from this law.
: Period.

See above. Keep wearing the rose colored glasses. I hope you are right, but past history says that you are wrong.

And having a Ham license does not protect you if you are operating in the legal CB channels.

```
: Your wrong and playing with semantics. The ARRL is solely responsible
: for licensing of HAMs. Without approval of the ARRL, the FCC would not
: issue the license. The FCC is no more than an escrow agent in this
: case.

This is incorrect. In the first place, only a minority of licensed Hams
belong to the ARRL.

Second, Amateur Radio existed before the ARRL came into being.

Third, the ARRL (and individual Hams), can only state their opinions
to the FCC on licensing or regulations. The FCC would still issue Ham
licenses, even if the ARRL ceased to exist tomorrow.

True, true...but hey, I already passed general theory...just have to do the CW...working on that. Your statement is also true for the CB people here.

It is a lot of fun to watch the complaining here. Never have been so tickled!

Oh, and anyone who does not like my opinion does not have to read it.

I like this warm spot under the bridge.

You bet wrong. There is an International agreement that
any Ham station operating on the HF bands will be "proficient"
in the use of Morse Code. Until that restriction is eliminated
internationally, and it may be at the next WARC, the US cannot
remove the code requirement without violating the agreement.
And we won't do that - as we depend too much on the rest of
the world abiding by those agreements.

I am personally in favor of more strict written tests for Ham
licenses. It is trivial to get one now - with a bit of memorization
of questions/answers or superficial knowledge of electronics. You
can handle 5 wpm of code as soon as you have it memorized.

I also would prefer to see the CB band opened up to about 27.75 MHz
and have the restrictions on amplifiers and DX eliminated. To go with
this, I would want to see the requirement that amplifiers be type
accepted.

133. hams taking 11 meters back

Newsgroup: rec.radio.cb
Date: 2000-12-01 03:00:31 UTC
From: n8wwm@aol.com
Message-ID: <20001130220031.09170.00001691@ng-cf1.aol.com>
Source record: 61403

This is the text of the QRZ.com story. I present it without comment.

Hi,
My name is George, and I am an Extra Class ham in Missouri. I am taking a survey of ham operators across the U.S. that are interested as I am, in the possiblity of the FCC giving 11m back to the hams. As you my be aware of, the 11m band used to be part of the amateur radio spectrum until the mid 1950's when the FCC created the Citizens Band.

Ever since then the CB band has went from being a licensed part of the radio spectrum, to being unlicensed, and I may add, mostly unregulated by the FCC, save for the ocassional "big bust" on illegal operators.

So, I would like to know what other ham operators think about presenting a proposal to the FCC and ARRL requesting them to give 11m back to the hams, and make 26.965 through 27.405 (the CB band), a CW, RTTY, and Packet, band for the Technicians. I suggest "low power", I recommend setting a power limit of 10 watts maxiumum, which SHOULD keep the CB'ers from infiltrating on to the band. And, as with all the ham bands, only LICENSED operators will be allowed.

I realize some my think this to be a "radical" approach, but I would like to point out the fact that the FCC as of 11/13/00, created the Multi-Use Radio Service (MURS), that is essentially, a VHF CB band. In case you haven't heard about this, it is posted on the ARRL website: www.arrl.org. With the creation of this new band, and with the widespread use of the General Purpose Radio Service, and Family Radio Service, it is my opinion that the 11m CB band has outlived it's usefulness and is now a "pirate" ham band, with high power linears and out-of-band operators infringing upon the 10m ham spectrum.

If this proposal is considered, I think that it will help eliminate the numerous problems of enforcement on the 11m band today. But, like I said in the beginning, I am only taking a survey, send me your e-mails and let me know what you think.

Well, you asked - therefore I shall give you my comment. I believe this is just another flame to see how much trouble you can stir up in the CB ng. I've stated before - we (yes, I hate to admit it, I have a ham ticket) are 'guests' in this ng. If we have something positive to contribute, I believe that is well and good and would be accepted. This sort of post, however, reinforces the idea that hams think they are superior and should run the show. From many of the posts around here, I am also getting the same idea. I gave up ham radio in 1970 and dropped my tickets. I decided to get the tickets back in 1993 and did. Now I think I am beginning to remember why I dropped the extra ticket in the first place. BTW, I noticed a post in one of the rec.radio.amateur ngs about go and check all the whining going on in this ng. I hope your operating proceedures are a bit more civil than what you are showing to this ng.

I am not a guest here at anyones behest. Nor are you. Whoever operates this NG can dust me if they want. And, yes I did post on another NG about the whining here. So? It IS whining. Period.

Something about the anti-free speech attitude here smells funny.

Aside from that, I am not the one who brought the QRZ article up in the 1st place. I posted it without comment.

By the way, if you don't like my attitude you dont have to read my posts.

I relish slam dunking people who do not know whereof they speak. So what? Big deal. If you get your panties knotted over my words then don't read 'em. That goes for everyone.

Perhaps he meant to say the ARRL VEC gives about 65% of the licensing exams.
They then keypunch the exam data for transfer to the FCC for license issue.

>the idea that hams think they are superior and should
>run the show.

Yes, that is the idea. anything is better than the present situation on 11 meters. Amateur radio has some problems, largely isolated. 11 meters is a toxic waste dump compared to the 1 quart oil spill that ham radio can be. Why? Because there is no accountability on 11 meters.

>I believe this is
>just another flame to see how much trouble you can stir up in the CB ng.

Nope. to quote Harry Truman: "I don't give 'em hell, I tell 'em the truth and they think it's hell."

>I hope your operating proceedures are a bit
>more civil than what you are showing to this ng.

Hey...the NG is the place to bitch, cuss, and whine. It has been proven to be by the buttload of it that goes on here. No, I would not operate the radio like this at all. That is not the forum to discuss this in.
I like letting the complainers complain all they want, then shooting them down. I am not so pompous to tell anyone here to shut up, as you have me. Talk all you want...cuss all you want...whine all you want...I am laughing my butt off.

> BTW, I noticed
>a post in one of the rec.radio.amateur ngs about go and check all the

That's superior? You try to convince CB'ers to become hams. You
are doing just the opposite. You are the anti-elmer. You are doing
you best to drive folks away from that hobby with your attitude.

So, Dougie, how would you like be blamed for the demise of ham radio?
There are many who sandbag in this group; hams, CB'ers and future
radio operators who now see what kind of people hide behind their
HT's and will be turned off forever by your kind of sniveling.
With less and less new blood, your frequencies will be auctioned
off to the highest bidder. Unfortunately for you, 11 meters is
useless to anybody, except CB'ers who can copy a signal through
higher levels of QRM then most hams. Recall my story about field day?

Don't think that your posts fade away after a week. They are all
stored on places like deja.com for all to see for a long time. As
an ambassador to ham radio, you should be deported. Maybe they'll
allow your type in Finland. You can join Gary and cry over lost
bands. Your entertainment value is increasing with every post.

BTW, who's spewing insults now? Why don't you use your time
constructively and do something useful - learn CW.

Well, perish the thought. Spin? Like what spin? I just think the anti-new law posts are funny...and pathetic. It goes to show you how far people will delude themselves. I don't care if everyone here plays "freeband" 'til they get popped. Or if they NEVER get popped. I just do not care.

The whole purpose of my posts is to point out the fallacies in these anti-law arguements and to laugh.
Did the poor CB guys get whiny about what I posted? They ought not to listen to the CB, then...that would really get 'em upset. Poor guys...my heart just bleeds.
Again, anyone finding my postings "mean" is not required to read them.

Good roof over my head, this bridge I am chilling out under....

Cleaning out my AM only rigs.

I have a Cobra 19 Ultra that I don't need. It is small and works.
I got it broken and replaced the audio IC. It puts out 4 watts with
slight forward swing. No mike or bracket. Will ship for cost of postage.

I also have a Cobra 25LTD. It comes with mike and bracket. Make offer.

I doubt anybody on this group would be interested in a Lafayette
LMS-40. It is 9 out 10. Comes with mike. $125 for this rare SSB radio.

Give me a brake - giving 11 meters back to the hams would fail. There is too much 11 meter equipment out there for 11 meter operators to give it up. It's illegal to operate on the "freebands" but people still do it, so they would continue to operate on 11 meters. Would YOU wanna be the one to tell the millions of truck drivers across the country that they can no longer talk on that pretty Uniden Grant or Cobra 148?

It probably depends on how you word it. Just put in the legal "out of the box"
description... "10 meter radio, freq coverage 28.000 - 29.600", etc... don't
mention the ability that it can be modified, "peaked", "tweeked" or "tuned"...
that might increase your chances of keeping it there...

thats not always true. in our area they have about 8 freqs on their hand held radios so they can corr communicate with other departments i.e. city kitties, county mounties, bears and they also have backup freqs that are not listed in the scannner books to discuss sertain things that are not meant for public knowledge i.e. telling an officer to go to someones house to inform them that a family member was just killed in an auto accident. And the radios they use ARE legal commercial radios a combination of motorola and kenwood. I work with them frequently as part of the local REACT team as well as being part of the local Disaster Services team.

Greetings!

I'm going to kill two posts with one...I guess I have to connect all
the dots for you.

You are responsible, for ANYONE that uses your station. If you allow
someone else to use your equipment, YOU are personally responsible.

This means that whether an FRS unit user, or Hi-Po miracle tube-amp
operator, you shut down an emergency communication - you are liable,
period. The FCC doesn't allow it, and the ARRL doesn't either. The
police have the right to shut down the interference immediately.

This does not exclude Amateurs. If you're legal and you cause the
interference - you think that license will protect you? I think not.
It's a completely different law than the one you stated in the other
post regarding my reply about an officer receiving interference from
your transmission. You block or jam a possible emergency communication
from another station, or interfere with a station receiving that
communication, you suffer the fate of being the fool.

Any person operating a radio that causes interference, can be liable
for interference, intentional or unintentional. This includes Amateur.

This law simplifies the process of who to blame in regards to private
and personal pursuits of happiness - in regards to interference.

In regards to your statement regarding wattage you can use, please
re-take the test. I passed this question, you do have limitations on
bands - 200W on certain regions of the spectrum. And RF exposure level
W/Vm limits on others. I suggest you brush up on your skills. [<WHAP>]

Matter of fact:
Take this simple test, take a 440MHz 1/4 wave antenna, hook it up to
your radio, and put the antenna in your lap and fire 1500W thru it...

After that, you may not need to be reminded of the "test" question you
missed...

Greetings!

Well' shucks!

Can't make it to the weddin' but I'd like to hear the reception on the air afterwards if you can spare a few watts towards Gawds Country Mitten known as Michigan.

The kitties are doin' well and everything up here was white for a while. Them whitetail were out bucking around for a few weeks. Gosh! with all that racket, the hunters were blasting away at anything that moved. Lost one because he fell out of a tree - musta' fallen asleep I guess.

Otherwise, a lot of people gave up turkey and had venison instead. Can see the smoky pall from the local natives smokin' the meat "till its' just right" here, smells good too.

Skips been rollin' in and out like a tide everyday. Been out on the 'net at www.spaceweather.com lookin' to see if anything bright in the sky is worth lightin' a fire for. So far, this has been the cloudiest time of the year, that silly snow machine they call Lake Mighigan has been keepin' the skys full of that smoky pall from those natives and the tracks from the whitetail fresh. Been a good hunt this year, along with a couple of frostbite cases - but pretty good results. I will be able to drive the chevy to the levy without whackin' into them "amourous" bucks and does with the sore heinies again this year.

Jake, the local dog-house dragger, is penned up pretty good this time. Seems Chad got wise to the old coot and got a heavy chain and some of them "boat anchors" that were rusting out in the shed to hold that darn pooch down. Never seen barbed wire around a kennel before, but the barks keep the strangers away.

Got myself a home-made 'tenna up in a tree and I help keep the locals entertained. Some of them are already entertained, so we just add to the fun listenin' to themselves drool over the mikes as they spill some swill.

Jay! It's been a hoot! Stop by sometime, I'll make a cup of joe for ourselves and catch up on swappin' them stories! I'll keep a Pen and Paper so you can draw out those antenna ideas for me.

Happy Holidays from the Gang in Gowen!

Message-ID: <8b5i2tge6kaf6spsmushdegj0bhugph3f3@4ax.com>
Source record: 61503

Greetings!

3 watts is what the radio produces when you don't talk into the mike
but key just key it up. [throw a dead carrier]

"Swings to 20" means it's putting out up to 20 watts as you talk into
the mike [Carrier plus audio (modulation)] - naturally you're going to
have to talk pretty loud into the mike to hit that 20 watt figure
constantly.

On 02 Dec 2000 00:16:12 GMT, while the modem was pondering it's navel,
mtngrlscityboy@aol.com (MtngrlsCityboy) dissertated the following:

:+> All,
:+>
:+> What is meant by a radio having 3 watts deadkey with 20 watts swing?

There is nothing in the type acceptance rules that prevents actual readout
of frequencies but it is a bit uncommon. The more usual ones are as I
described. It does show, however, that any number of control possibilities
exist. The one thing that should be true of type accepted stuff is that the
freqs are preset and not changeable by the user. I would think that most
agencies would not want freq displayed for exactly the reason you specify --
no sense in advertising to the public nor any reason to burden the user with
more knowledge than he needs.

For similar reasons, it was pretty common to use a 222 band freq even on
Amateur weather nets to evade scanners where some security made sense.

Just what is it that these radios read out??

One cannot equate the number of freqs to the determination of troublemakers. We live in a society that has created the myth that everybody "can do their own thing". What we have accomplished is to allow a few folks to carry this to extremes in all walks of life. I think you would agree that the number of conferences on the newsgroups far out weigh the bandwidths of either CB or Ham radio. An interesting exercise is to list the prolific posters on a conference, you will find that a dedicated core of loud mouths dominate any conference. On here for example, the major number of posts are written by seven individuals. The remainder of the posts are people responding to them in some form or fashion. The consequence is that the tenor of the conference is the sum of these individuals.

This same dedicated kind of group is found on rec.gardening.growingroses or CB or Ham or what ever. Unfortunately, negative posts by the "doo flingers" do two things, first they cause those that want to avoid contention to not enter the fray and the rest to perpetuate "ain't it awful" posts. Is Ham or CB or growing roses better or worse than one another? Nope! but if we pay attention to people who start threads such as "All CBers suck" or "Ham radio scum" we remove the opportunity for discord and provide the enjoyment the aforementioned group enjoys.

Incorrect Sir! Novice and advanced still exist and are renewable, simply no new ones are being issued. Next there are a number of subbands that a ham is not permitted 1500 watts. You cannot run over 200 watts in a novice subband or in some cases whole bands such as 17 meters.

Cody,

The idea here is to run illegal operators off the illegal frequencies. That is a main goal of the legislation.

As far as an amateur being liable for interference goes...Not in the case of a TV, VCR, or other part 15 type device.
HOWEVER, anyone in ANY service is liable for deliberate interference to emergency and other civil government services. It is a criminal act that anyone in any service can be nailed for. My point was that a legal amateur is exempt from the new legislation. That is clear if you read the bill. All the "what if's" in the world do not change that. Illegal operators are the target of this legislation.

What you aren't acknowledging here is that illegal and non-type accepted equipment is responsible for the majority of the interference problems. That is the case.

Regarding running 1500 watts on 440 mhz: Lotta guys do it. Maybe not on 440 FM, but on 432 SSB. Look at any QST magazine and you will probably see one.
They dont use ground planes...they use multiple phased yagi arrays.

<guesswhat@charter.net> wrote:

>Well this is the way i see it. The FCC can not look after all the ham bands
>they have now that is the reason they give up 11 m a long time ago.

They gave up 11m to the CBers because they were way too many illegals
and morons on the band. It was a case of overload.

>And you
>stop and think about this If the hammies got the band back what would they
>do with all the cbr's on it. As it stands there is more people on the 11m
>band than you think.

I would guess most hams don't want 11 back. Giving it back would
never work anyway. Let the CBers have it.

>And what will you do with all the mexicans on the band
>that dont care about you or me or what we think they talk regardless . I
>think it is crazy if the FCC is looking for a fix on the 11m band they need
>to give more channels to the cbr's so we don't have to run 2000 watts to
>talk over the other guy just to get to talk .

If you want to run power become a ham. CBers have enough room for
their nonsense. Unless you are a contester or need constant ego
massages you don't NEED to run high power anyway.

>You stop and think about it
>the 11m band has 40 channels the hammies have hundres of channels to talk on
>so what gives.

"What gives" is that the rules state CB has 40 channels and limited
power, want more? Get your ham license.

>now you won't the 40 we have back I think it is a bunch of
>shit myself. And i think we are blowing this all out of wack the more we
>talk about this the more bull gets started!!!! I am off the key now so have
>a nice day Georgiaboy753 Westcentrol GA

Like I said, we don't want 11m back. Hams had NOTHING to do with
that new law. NOTHING. Get over it. You are the one blowing it all out
of wack. If you want more freqencies and want to be able to use more
power get your ham license. Simple.

>limited to 200 watts in the novice sub-bands)?

True, and an omission I made in the post.

>1.5 KW in the 10.100 to 10.150 MHz band?

Forgot about 30 meters...oops.

However, those are the exceptions to the rule. Also, since most here are not hams, they would not be able to be newly licensed novices, etc. since there are no new novice tickets issued. That was the context of my statement.

Any general class can operate 1.5 KW, to my knowledge, on any band he has privileges for except for the places heretofore mentioned. That's a big old land to roam in...whooee.

The reason 11 meters was taken for CB is that hams did not then or now give a rat's ass for the band.

1) The standard TV video i.f. was 25.75 MHz. It took cast iron cajones to work 11 meters. FYI it is now 45.75. This is also the reason for the ridiculous 4-5 watt power limit.

2) The band did not fit the usual harmonic relationships that make multi-band antennas a whole lot easier to handle. If nothing else, I can use my 40 meter quarter-wave on 15 with relative ease, my 30 meter antenna on 10, etc. with a minimum of flap. Often I can even use a common feed point for 80 and 40 dipoles or even verticals (e.g. the Hygain Hytower) and get three-fourths on 20 in the bargain. 27 has no relationship to any of them. The biggest single difference in Amateur operation and equipment vs CB is this multi-band concept.

3) Ten meters has all the room the Amateur world needs in the 25-30 MHz garbage frequencies.

As an amateur band, 11 meters never aroused much more than a storm of pure apathy. Still does.

HI Craig,
I am interested in the Wilson 1000 Mag mount for 35.00 dollars if you will sell separate.
Donald

"Craig" <moonman@telcomplus.net> wrote in message news:3A292179.AC4A210F@telcomplus.net...

For Sale, All prices include shipping to lower 48 states.
K-40 Antenna with Mag Mount.(11m) $25.00
Wilson 1000 with Mag Mount.(whip is cut for 10M)$35.00
Wilson 1000 Coil only. $15.00
Wilson 1000 Trucker, (whip cut for 11m) $35.00
Cobra 148GTL Well used, some knobs are worn and face plate shows alot of use. Radio come with handmike,mounting bracket,and power cord. Mods. Radio works good, just would not win any beauty contest. $55.00 (SOLD)
Uniden PC-122 has been mobile, and has some wear marks. I got some of the best audio reports from this little ssb rig. Califier mod. Hand mike, mounting bracket, and power cord. $50.00
Two, brand-new replacement s-meters for a 148 gtl and would work with a few other rigs. $15.00 for both.
I also have a Black Cat 2 kW SWR/Peakreading watt meter with a built-in 6 digit Frequency counter in excellent cond.$65.00 shipped lower 48.
Thanks,
Craig

You may not know N8WWN, but you know his kind. His type are
easily intimidated and made to feel inferior by CBer's, who he,
although maybe subconsciously, feel are superior to him.Therefore,
he re-directs his inferior feelings to a self-dilusional dislike for
the person/people who he actually admires and wants to emulate.

The ARRL is part of the International Amateur Radio Union (IARU) not the
ITU. The IARU has the same relationship to ITU that ARRL has to the FCC, a
group of interested users whose opinions are solicited but hardly decisive.

The ITU goes back to 1869 when Kaiser Wilhelm I found during a visit to
Paris preparatory to invading the place the following year that he could not
send a cable to Berlin. Radio regulation dates from the 20s via the Geneva
Treaty that is renegotiated at regular intervals, as a practical matter well
before the meetings and in the local watering holes and hospitality suites.
The actual representation is done these days by the State Department.

The treaty in the definition of the Amateur Service (CB is the Land Mobile Service) requires Morse knowledge to be demonstrated (the famous 25.5) but does not actually specify a speed. By regulatory agreement, 5wpm is the word.

There are people who know more than I do but my understanding is that 25.5 does not even have a place on the agenda for 2003. Without some agreement among the users and therefore ultimately the governments one hopes, there will not be any possibility of revision in this cycle. So as the largest amateur contingent, the League has properly assumed the process of attempting agreement among national radio clubs or get in line with them as one's prejudices lie.

The League has traditionally oversold its actual influence on things. Kind of sounds like a number of people on CB have bought into that fantasy.

Why would the hams want 11 metes back? The band is total chaos, you would never be able to get the cbers off it, and besides, the hams have all of 10 meters which is uncrowded even when band openings are good, plus all the other ham bands.

>
>
> >And what will you do with all the mexicans on the band

If the cbers would run legal you would not need 2000 watts to talk over the other guy. You only need 2000 watts because he is running 1000 watts.

True, the hams don't want it back, the new law is to try and clean up what the cbers have turned into the sewer pit of two-way radio communication and has nothing to do with trying to get the band back for the hams.

As one who used 11 meters while it was a hamband I have seen a number of historical facts about the band that are plainly in error.

11 meters wasn't a neat division as is 80/40/20 etc. As such in the days of yore it was under utilized. The government in their infinite wisdom decided to remove it from ham use and create a Citizens Band that could use the technology present at that time to provide low-cost equipment. The other Citizens band at that time was in the UHF range and virtually nothing existed to utilize it. At that time a license was required and application along with a fee had to be sent to the FCC and calls such as KDW7076 were issued and authorized up to 3 units to operate under that call as "KDW7076 Unit 1". Application could be made to add additional units. Power was limited to 5 Watts input, antenna height was limited to 21 feet as best I remember. The early pioneers found that a lot of old ham equipment was available that would operate on the bands at a 60 to 100 watt level and down the slippery slope it went. The FCC gave up on licenses and callsigns and any other enforcement efforts. The basic rule seemed to be if they stay in the 23 channels leave them alone. The same seemed to be the case after expansion to the 40 channels. The CBers encouraged by the fact that if you occupy a channel (those above 23) you get it. Now that everybody had "uppers" the pioneers once again moved up to get out of the fray. The upper channels were normally populated with the more knowledgeable people who operated as quasi hams. The manufactures then created easily modifiable equipment that would let anyone move to these previous "exclusive" freqs and we now have the chaos we have today.

> Dave, The ARRL is only one part of the ITU, and if the ITU position is to
> require CW, no matter what the ARRL says, that is how it will be.
>
> Yes facts count, and that is one.

The item below is a talking point for petitioning the ARRL to drop it's stance of retaining CW as a requirement for Ham operation on HF. It shows the ARRL to be the ONLY member society to vote no on dropping the code. It further points out that 4 years ago, opposition to the league's representation of the Amateur community was already at a level of 62% of the members they represented. In short, the ARRL is ignoring 62% of it's members (a 4 year old figure) requests by remaining the ONLY member society to vote against removing the morse requirement from international regulations.

I admit to not having a degree in rocket science, but my interpretation of the item below (which I included in my original post) clearly shows the ARRL to be the only opposition in the IARU to removing the CW requirement. It has already been dropped by all branches of government and military service, and their scope of operation is in no way limited to CONUS only. This in itself negates the possibility of it being required by international treaty (ITU). The only dog in this hunt is the ARRL.

If I am missing something here, I honestly and sincerely want to know what it is, so I lessen the chance of passing along bogus info.

David
KD4NUE

****
2. You're extremely disappointed that the League was the only
member society to vote "NO" at the recent Region 3 IARU
conference in Darwin Australia on elimination of S25.5 from
international regulations. This vote was made despite the fact
that the League's own 1996 opinion survey for WRC99 showed that
only 38% of the amateur population wanted to retain an
international treaty requirement while a majority of 52% favored
allowing each country to decide for itself whether Morse cw tests
were appropriate, with the remaining 9% having no opinion.

Of course, N8WWM is resorting to name calling and insult tossing.
These tactics sound like Al Gore tactics. Doug couldn't hold a
decent conversation on simplex, much less a 2 meter repeater.
The control op must turn off the system when he hears his call!

Dick,

I agree on the ITU / IARU comparison and representation. However, in light of the Armed Services, Coast Guard and other organizations with international affiliations having already dropped CW in their bag of tricks, it does kind of fly in the face of the ITU requirement argument, doesn't it?

My flawed way of thinking tells me that if large representatives of the United Stated whose scope of operation carries them into the ITU jurisdiction, and they have already dismissed the ITU requirement for Morse, something must be up. This was not an overnight coup.

Either I am apparently missing something here, or our Armed Forces and other Governmental branches are obviously trying to stir up some trouble with the ITU.

This blatant action obviously overshadows the influence that the opinions of the Ham community concerning the subject quoting regulations that our own government has gone to great length to defy with much forethought and apparent malice.

Something isn't right with this picture.......

"It's dangerous to be right when the government is wrong" (Quoted from Songwriter Karl Klang)

Do they feed you three meals a day under that "nice warm spot
under the bridge" you like so much.

Since you like being in the spotlight with your juvenile name
calling and insult throwing, I have also posted this to be seen
by your peers.

All hams are not bad, but this rotten apple needs to be tossed.
Since many hams have been told to go to rec.radio.cb and stir the
pot, just see all the doo spewed by N8WWM on that group. Join the
fun in ostracizing this idiot.

N8wwm wrote: (I put no insults here, but watch how many he puts in
his response!!)

snip
>. The manufactures then created easily modifiable
>equipment that would let anyone move to these previous "exclusive" freqs and
>we now have the chaos we have today.

What chaos? I have yet to hear any great, often, or extreme 10
meter interference that comes from within the expanded 11 meter
band. When I do, the interference comes from outside the USA.

When there is 11 meter generated interference it interferes with
11 meters. How can this possibly cause any real concern to an
amateur who has nothing good to say about 11 meters in the
first place?

All this whining is more about jealousy than anything else.
Jealousy of a large number of people enjoying something that
they can not.

If any ham has a problem with a 11 meter operator then they
should take their complaint directly to the operator and stop
whining to a newsgroup that doesn't have any ties to YOUR
problem.

P.S. This post isn't directed at any one Amateur. It is directed
at all the non positive visiting Hams. The ones that have nothing
better to do then to whine about how bad things are. The ones who
have never had the ability to participate in a positive fashion no
matter where they are. The grumpy, arrogant prudes. Have a nice
life. With your negative approach to everything I'm sure you have a
lot of close friends.

The high bid on this classic is $30.00

I still have a Lafayette LMS-40. It is 9 out 10. Comes with mike. $125 for this rare SSB radio.

Hello G Seven: Try a MFJ model number 259B Anatanne Anaylzer. They sell a optional coil pakage that has the pick up coils to allow the antenna anaylzer to work as a grid dip oscillotor.

The neat thing is about the MFJ 259B is that there is a digital frequency read out that pretty close to dead nuts on.

Hello Scott: Yes the boys over on rec.radio.amateur.misc are quit the
entertainment source. I also keep an eye on the following:
rec.radio.scanner
rec.radio.amateur.antenna
and
rec.radio.amateur.equipment

I kind of think that when the ones that don't even play well over on the
menationed newsgroups come over here. Look at the posters here and then
go see what these guys are posting on the menationed newsgroups.

And yes we do get along with each other quit well as compared to the ham
newsgroups. However these other newsgroups are like anything else you
half to sift thru them to get what you want. And at times there are a
pretty good source of infomation.

Rockin an ah Rollin in the Great Mojave Desert, ... jay123a@qnet.com

I said hams don't want 11m back. Are you quoting properly?

>> >And what will you do with all the mexicans on the band
>> >that dont care about you or me or what we think they talk regardless . I
>> >think it is crazy if the FCC is looking for a fix on the 11m band they need
>> >to give more channels to the cbr's so we don't have to run 2000 watts to
>> >talk over the other guy just to get to talk .
>
>If the cbers would run legal you would not need 2000 watts to talk over the other
>guy. You only need 2000 watts because he is running 1000 watts.

I didn't write that quote...

>>
>>
>>
>> >now you won't the 40 we have back I think it is a bunch of
>> >shit myself. And i think we are blowing this all out of wack the more we
>> >talk about this the more bull gets started!!!! I am off the key now so have
>> >a nice day Georgiaboy753 Westcentrol GA

I didn't write that one either....

>> Like I said, we don't want 11m back. Hams had NOTHING to do with
>> that new law. NOTHING. Get over it. You are the one blowing it all out
>> of wack. If you want more freqencies and want to be able to use more
>> power get your ham license. Simple.
>
>True, the hams don't want it back, the new law is to try and clean up what the
>cbers have turned into the sewer pit of two-way radio communication and has
>nothing to do with trying to get the band back for the hams.

Bingo, you quoted me right that time. I agree with your agreeing
with me.

No, as I noted it is part of the definition of the Amateur Service. No
other service ever did have mode specific definitions.

>
> My flawed way of thinking tells me that if large representatives of the

Again, only the Amateur Service has or ever had a requirement like that.

>

Actually quite opposite, the brie and white parties at the French suite are
legendary as are the Stilton bashes at the British delegation.

What is not right with the picture is the rather odd situation where the
very definition of the Amateur Service includes knowlege of Morse Code. It

applies to no other service.

hi, has anyone had a problem with a 148 gtlf with frequency counter. the lock detector has been unlocked for some time now. there is no loop mix signal, there is no clarifier control at all. the channel selector does not work right. i have tried replacing the mb8719 pll chip, the 11.325 crystal and have changed various capacitors around the vco. also tried relacing the vco chip several times. if anyone has had a problem like this or similar or maybe just some advice to get me in the right direction i would appreciate the help.
tom

Rolling:

I ran close to 600 watts in a '98 KW T-600 for 6 months with no problems... of course, I also used a dipole antenna, removing the "ground" for the antenna from the vehicle altogether. The computer never coughed once in that whole time, and I was heard by quite a few on 6, 11, 14, and 26 in those 6 months... especially last spring/summer from AZ, NM, and West Texas, and earlier in the winter from WY, WA, UT, ID, SD, IA, and Nebraska.. And this isn't counting the SSB contacts up on 37, 38, 39, 42, and 43.

If you run power in a computer controlled truck, just be sure you've got good grounds everywhere, or remove the grounds from the truck completely by setting up a dipole or bipole antenna, and he'll do just fine.

Just my two cents. Your mileage may vary.

-SSB (A.K.A. 151 - The Crazy 1)

On or about 28 Nov 2000 04:44:26 GMT, rollingradios@aol.com (RollingRadios), using the forum rec.radio.cb did say:

Have you tried retuning the VCO can with a non-metallic tuning tool?
Also, check for cold solder joints on the selector switch, ribbon cable,
diodes and resistor packs if it has them.

Why? It seems to me that many of them are talking on the 10 meter
band. Perhaps the ARRL should petition to get the 10 meter band back.
I don't understand the attitudes of the HAMMIES and the CBERS as my
relatives didn't slogged their butts over here on perilous
transportation, fight the british, and gain their freedom to be
governed by despicable people such as the FCC heads and the
Klinton/Gorewhore team. Nobody needs to act like royalty here on this
side of the pond.

Then find the c&@k sucker and silence his station! Quit sniveling and ACT!!! For Christ sake! All I see here in this here NG is a bunch of overaged, retired, boring f#@king HAMs who ain't got nothing to do but bitch and whine. An old Master Chief friend of mine once told me..."the best course of action is to act, but the best action in any situation could be no action at all." Instead of talking about it, do something! If not, shut up...

You're there in HAMland and I'm here in BFE almost 800-2000 miles away from you (depending where you're at) and there is no way I can create your so called sacred "spurious emission" at that distance. Its locally generated, over-modulated, maul-droppin' strappers (which more than likely are HAMS) that cause you such grief. I have none, no (CB terminology) "bleedover" from even my neighbor who is a little over a quarter of a mile away on 19 and I'm on 38lsb. And he's running hot! C'mon...

Another cber opens his mouth and spews his ignorance. That statement shows your complete lack of knowledge of radio signal propagation. Spurious emissions can propagate long distances just like any other signal.

I don't believe many are worried. Our government and policing bodies have already demonstrated they can't control:

Illegal Aliens
Drugs
Speed Limits
Domestic Violence

and a host a hot of other far more serious and socially damaging crimes. Why? should anyone believe they will have time to worry about CB radios.

I am always amazed why anyone in this NG bothers to acknowledge a limited individual like yourself n8wwm but there is always fish willing to bite on any turd that floats by them.

I suggest that all the CBers with 10 M rigs start using the 10 meter band regularly and lets start taking our discussions to the ham boards. Time to let the Ham world know that there are ways for the misrepresented to fight back.

Why are you afraid to post this the the amateur group as well as
RRCB? I knew you couldn't resist a chance to place an insulting
post to RRCB. Back to the name calling and insults. It's what you
do best. You should spend your time learning CW, since CB is evil.

Source record: 61681

I think we are in complete agreement with the overall situation. I have used other terms to come to the same end point. The ARRL is the biggest stumbling block to the future of Ham radio.

In the contest of the original post, it does put it solidly on the back of the ARRL; not the ITU or IARU. The sooner that the intereference runners among the Ham ranks can admit to this, the sooner we may be able to revive the ARS as a viable hobby and asset to communications worthy of the spectrum rights it currently has. The loss of spectrum is a serious issue, and most Hams refuse to acknowledge it as a possibility; even when the reality of it strikes them in the face.

More responses below.....

This is the epitome of the problem, and contains the essence of the solution. Thanks for the confirmations.

It is a real shame that we as hams have to defend potential future hams against the acceptance of hogwash spewed forth by others in the rank of our fraternity; the same fraternal order that by the Amateurs Creed are supposed to be ambassadors of good will.

I enjoy the CB NewsGroup, as you know from our past correspondence, for my quest knowledge on AM techniques to eventually apply to a vintage 6m AM station. Having said that, I feel like I am a referee at a sandbox, dispatched to keep teenagers from rubbing sand in the eyes of gradeschoolers. I say that only to reference the low handed blows passed here by other hams; not necessarily to reflect the difference in technical prowess of those in the CB community. I have certainly heard more in-depth technical possibilities discussed here that are germane to my interest than in the ham newsgroups I also read.

73,

David

Are you absolutely sure that such ignorance hath spewed out these here mouth? Spurious emissions, harmonics, and intermod products can be caused by a number of factors. And not all are from CB. Propagate? Yeah. Propagation from a passing satellite. JR? Stop...

Seabag lawyering has been part of the hobby forever. The biggest problem the ARS faces is the decline of occupations in which a journeyman's knowledge is sufficient. Your local TV man may well have been an amateur, the DX he worked was more than likely an engineer for Radio Slobovia or RCA Globecom, and so on. Kept it down to a gentle ladylike belch.

So also was a pecking order and the games that go therewith. But the major problem is the lack of first-rate junque.

Dick

273. N8WWM has no LIFE

Newsgroup: rec.radio.cb
Date: 2000-12-02 00:00:00 UTC
From: G SEVEN <superiorwavelength@prodigy.net>
Message-ID: <90crvl$c1s4$1@newssvr06-en0.news.prodigy.com>
Source record: 61686

N8WWM, has no life. At least he's not prejudice to just CBers, he talks shit on the Amateur group as well. Out of all he's post there is only 10% that actually contribute to the hobbies. Stop wasting your time arguing with him, by the judging of his past history he feeds on the HATE AND DISCONTENT. Dont give him what he thrives on.

KRS

A snip of his masturbating intellectual conversations with his fellow HAMS_____
_____

HE NC
The man states the obvious...the obvious is not libel.
What you could do, to just shut it all down at once, is get the hell off of here with all your nonsense and pathetic, immature attention grabbing attempts.

No one on here cares if you are upset. That is because you are haughty and you are a liar. These components of your character have been amply displayed. They are also things that tend to limit an individual's acceptance by a group. Since you are a PhD, use your noodle and figure it out.

In plain english, GROW UP.

>> Then Jim, what right do you have to
try to bias folks INTO that opinion,
>as
>> opposed to letting them make up their OWN minds? What 'jolly' do you get
>making
>> a DELIBERATELY hateful statement towards a stranger?
>>
>> NC
>

If this is such a killer antenna why doesn't every ham scramble and build one now?

By the way...Arnie Coro is a better man than anyone needing to post stupid comments about an antenna no one gives a damn about in a news group.

Bottom Line: No one really cares about your bullshit, Chip. Take it to the ARRL and see if you get published in any real sense. Better yet...why dont you go to one of the publishers that let you publish anything you want as long as you pay all the costs? That way your great grandchildren can curse you as they haul all ten thousand copies that never sold out of your attic

when you croak.

I think you, your cohorts AND your critics all oughta get a life. Go play with your radios, quit spreading your sewage, shut up, grow up, be amateur radio operators.

The subject, the attitudes, the whole thing...utterly goddamn useless. Use some of that intelligence that gave you the ability to earn a PhD and accept it sometime soon...maybe after a long few minutes of looking in a mirror.

<< previous in search • next in search >>

I am just weary of the BS.
My dad<RIP> used to say.."It just makes my ass tired"

When some of the posters to this NG become assets to it, as many others are, we will all enjoy it more.

Anyone who defends themself to me is wasting time. I don't care what YOU do...I care about the newsgroup. I suggest all of the whining be moved to the telephone...or better yet...choose your weapons, start back to back, take 8 paces, turn, aim , fire.
We have new people here who need help...why dont the fussers take out time and make ONE constructive post to a newbie or some other inquiry?
OR...You could start your own NG and call it rec.radio.amateur.whinebabies

Here N8wwm aka Eric Aube is looking for MODS to tweak and peak his little Cobra 18, tsk tsk N8wwm.

Can you spell HIPOCRITE??????????????????????

KRS

I have a factory reconditionned Cobra 18 Ultra WeatherBand CB Radio and I'd like to know if there are any modifications I can do on it (like boosting input or output wattage.. etc)

thanks!
Eric

>Jerry Oxendine joxendi@bellsouth.net said

>the law is on my side,

The law is never on our side. Law by its very nature is restrictive,
controlling, bias, and very unfair to the majority in order to protect the few
" weak".

> it might be funny to watch 'em squirm

It's not likely you will ever see a cop squirm in court.

> this is going to cause trouble for
>innocent CBers and licensed hams alike--legal or not.

Correct.

>They should've given the money back to FCC and let THEM do the
>job.

No funds were allocated, so no money may be given back as you say.

> It is a bad thing, which, I fear, some of
>you who are snickering up your sleeves may find out later.

I agree Jerry.

Someone please check me - I am getting old and golly geeze, probably have trouble copying much more than 45 or 50 WMP now (my typing is down to 70) ...
but, uh, gee I hate to seem stupid but .. I don't think novice and advanced licenses disappeared. You cannot get a new novice or advanced, but I do believe they are renewable if you hold one of them. So, another question .. can anyone else now run 1500 watts (I am serious, I don't know the answer to this) in the novice sub-bands below 28 MHz since novice licenses are still valid (and the rules used to stated EVERYONE with a license good for HF was limited to 200 watts in the novice sub-bands)? Certainly, an existing novice license not due to expire would have not been pulled away when the new rules took effect. Also, how many classes of license allow their users 1.5 KW in the 10.100 to 10.150 MHz band? Unless things have changed recently, I can count that number on the fingers of my left foot (or toes on my right hand).

Thanks and 73s from Rochester, NY
Jim

Jerry Oxendine <joxendi@bellsouth.net> wrote:
:>
:> The cop says "Tell it to the judge!", writes the Ham a ticket and gets
:> his buddies down to help tear the Ham gear out of the vehicle.

: And he will be paying for all damage done including replacement of any
: and all equipment removed.

Do you think so? What if they use the same procedure used for illegal drugs, and now starting to be used for drunken drivers or people who solicit prostitution?

: Or if the
:> cop is lazy, he doesn't even write a ticket. He just calls the gear
:> "illegal CB equipment".

: He will also have a problem when I report the seizure of said equipment
: thru channels to Department of Defense. Some of my mobile equipment
: doesn't belong to me, but is USAF equipment purchased with DOD funds.

You may have an edge there. Most Hams wouldn't. But don't count on it to protect you completely.

: Imagine their horror when DOD/USAF Investigations Division pays them a
: visit! Part of that equipment is charged out to me on a DOD-type docu-
: ment. Start "confiscating" military equipment and there'll be hell to
: pay!
:> Now, what can the Ham do? His only recourse is to go to civil court in
:> an attempt to get the gear back.

: And, that I would do. Under the circumstances, the law is on my side,
: and they will be paying every penny I can legally extract. There are
: too many issues, too many variables for local, non-electronic under-
: standing cops to keep from getting their own butts in hot water. Yes,
: it would be very inconvenient to have to go to court, and would tick me
: off BAD--which is why I'd do everything I could to get back at them in
: court. OTOH, it might be funny to watch 'em squirm under the scenario
: I quoted above.

It all depends on how the laws/regulations were written. They might give the police the powers to do exactly as I stated.

Forget about your DOD example. It is a rare exception, and meaningless to the majority of the Hams and CBers.

: I STILL say to the hams that think this is so cut and dried, and you
: are "exempt" from local enforcement, this is going to cause trouble for

: innocent CBers and licensed hams alike--legal or not. You are NOT
: exempt from the ignorance of untrained LEOS, nor are you exempt from
: LEOs with "I am the law, boy" attitudes. The job of enforcement belongs
: with FCC where the training in comm. law, locating offenders, is (should
: be). They should've given the money back to FCC and let THEM do the
: job. This way, at least, offenders would be subject to consistent laws
: and not the vageries of local statute, incompetence (in radio), and who
: know who down at the station. It is a bad thing, which, I fear, some of
: you who are snickering up your sleeves may find out later.

As I have stated before. I agree with this statement completely.

I'm a Ham and I have no intent to take back the 11M band. There is
no reason at all for the FCC to take the 11m band and converted to a
Ham Band. Ham radio has much more frequencies to play with than CB now
and they are nor fully being used. As far as the future of CB what
should happen is a new CB service on VHF/UHF with 40 channels and 5
Watts of power. A VHF CB would rid the problem of DX stations from
1000 miles away stepping on 2 CBers talking to each other 7 miles
apart. Now there is the FRS radios but they are one piece unit that
don't allow a external antenna which in my opinion if just to
restrictive. As for as the 11 Meter band it will be there for a long
time to come so don't worry, it's us Hams who have to worry about our
frequencies being taken away especially our VHF/UHF bands above
440Mhz.

Here is My opinion, I think the 11 Meter band should stay CB. We
as Hams have enough frequencies on HF. If Hams want more HF
frequencies think about expanding the 20 Meter band instead. George,
instead of trying to take back 11M you should concentrate you efforts
in protecting the VHF/UHF frequencies, for there are forces out there
who want to take them away.

here long before windows or Mac was the way to talk, it
was Unix. Then when some one said, "But Linears are
illegal" we said "OK", and that was that. But now a
days some people including you, bring it upon yourself
to hold a holy crusade to rid the world, and show the wrong
doers there misdeeds. Yup, just keep typing, "Hollingsworth
is gonna get you", "Good, now things will be like it was in
the olds days" Really?
I don't know about you people, but this has been a hobby
of mine since the late sixties, Yup, that's right, over thirty years and
well before then. I remember as a kid going over to my parents friends
house, watching him talk around the world on his radio equipment. His name
is Bill Orr, that's right in the early part of that decade and still, too
this day he is considered a good friend of the family. I have listen to the
same rhetoric, FCC is cracking down, CB'rs are no good, Hams are evil, it's
all bullshit. It comes and goes, but people making trouble here and on the
air, will always be around.
Good luck on cleaning up the world of speeders, linears,
illegal radios, high watt head light bulbs, loud exhaust and
all the rest of the small crimes in the world today.
Boy the Holocaust must have paled compared to the
hampered life of all the radio operators in the world.

The Landshark >>

What did Bill Orr say when you told him you had decided to make a hobby of
keying over people with big linears and taking over frequencies that didn't
belong to you?

Rick,

Thanks for introducing a level-headed direction for this thread from the Ham community. I tried to preach to the masses of fellow hams when the Spectrum Auction concept was initiated in the early 90's. I based my concerns from an article by Robert L. Samuelson in Newsweek called "The Silent Giveaway" which outlined the FCC's plan to create operational revenue by auctioning off RF Spectrum.

The far more experienced Hams than I gave me the usual "you are stupider than I" attitude, and I watched 2 MHZ of the 1 1/4 meter band slip away from our grasp. They still refused to acknowledge the warning, claiming coincidence; and refusing to read the source. FWIW, the Auction period is still in effect to 2002 before possible renewal for another 10 years, and any source of revenue for Government operations is free game. (FDR Backed the National Debt with the value of all the land in the U.S. after taking us off the gold standard by forcing through HR 1491 on March 9th, 1933). This little piece of legislation made land ownership impossible for all future generations and substituted possession as the only claim to land we have after we purchase it and pay the perpetual taxes to keep from being evicted from our "property." For those doubting the validity of this claim, explain how something you own can be taken away from you for back taxes. You can't be taxed on what you own, merely on what you possess .

The same mindset applies to spectrum usage awarded to Amateur operators as an incentive to keep aware of technology and represent a trained communications asset available in times of War or National Emergency. After a brief look around by the most casual disinterested observer, it can be quickly noticed that there is not a lot of assets in the Amateur Gene pool if attitude is an indication of prowess or ability. I can understand the concept of hidden talent, but don't feel it is an asset to the Amateur community for Hams to keep this talent so deeply hidden from view or practical application.

Even the first rung on the Ham ladder has access to all spectrum allocated to Ham operations above 50 MHz. By comparison, HF only comprises around 7 MHz of spectrum. The offset for a single 70 cm repeater pair is nearly that

much. and 70 cm alone covers from 430 to 450 MHz; roughly 3 times the amount of spectrum that is being held hostage by morse code and preventing younger, more aggressive and technically savvy members from joining the Amateur community.

I guess, in the final analogy, there won't be much worry about Hams reclaiming 11 meters, as the percentage of Licensed Hams decreasing due to attrition is now probably exceeding the percentage of newly licensed Amateur Operators as a result of some of the same thinking as has been demonstrated by many of the posts in this NG attributed to other Hams.

As for me, I am a Technician "Lite"; not spiritually joined to the worship of binary oscillations of a momentary contact single pole single throw switch. For this reason, I am not considered to have the technical abilities needed to operate HF. I am often reminded of this by holders of higher level Ham licenses, who I see when they need their HT programmed, an end soldered to their coax, their rig repaired, backup battery replaced; basically anything outside of the appliance operator status that they were awarded by learning CW.

Unless the Ham community soon decides to Wake up and smell the coffee, they will soon realize that Rip Van Winkle ended his Nap and took the coffee maker away. We can't maintain a use it or lose it task force while alienating more younger candidates for the hobby with a one-foot-in-the-grave-in-your-face mentality that is so prevalent that it spills over into newsgroups such as these. I can guess by your 2X3 call that you are affected in a similar manner by the operators in your area. At least you have your eyes on the prize, and that is an encouragement.

Go to rec.radio.amateur.misc. Those boys can barely keep a thread civil without major infighting and doo flinging. At least CB'ers can get along with each other. When everybody is packed in a small room (40 channels), it's put up or shut up.

With all those frequencies, the Hammies should be able to not step on each others' toes.

Source record: 61699

Greetings!

Is the BCD channel selector switch ok?

I know that using the 148F - the channel selector can go bad causing
the out of lock problem.

There is a detent contact that when it's not in the right position for
each channel, the line prevents the PLL from trying to lock in.

Check the status of all the pins going to the PLL, the ROM inside the
chip may be preventing the thing from locking in if not all the pins
for the channel selection are correct.

On Sun, 3 Dec 2000 17:17:51 -0600, while the modem was pondering it's

Tim,

In spite of age, Collins gear is still much coveted and was ahead of most other manufacturers of the day. A 75A-4 is still an extremely selective, highly competent receiver. Its image rejection is extremely good. That is why Collins gear still commands a premium in the marketplace.

The town was (I may butcher the spelling here) Ludowicki
GA. The head cop there was more like the Bufford T Justice
than Jackie Gleason was. I actually saw him in the early 60's,
with about 10 or so cars lined up on the side of the road
(before the interstate) smoking one of those cigars that looked
like a small baseball bat, one foot on the bumper of a
'Yankee caw' writing a ticket.

And there was a billboard... It said not to stop for ANY
reason in the town, and had a GA State Trooper parked
under it. I guess to keep the sign from being vandalized.

Evidently the town got a real bad rep for water in gas tanks
at gas stations, cars getting flats at the diners, and speed
traps.

Hey,

Doing some research on CB radios...

I'm planning on kind of a road rally/moving event, and would like to know what a good handheld CB radio would be, THAT includes a DC adapter for a vehicle, in addition to batteries for when I'm/we're on foot.

What should I look for in particular and to stay away from??

Anyone have a good experience with a certain model in the past and recommend it? Its only going to be an annual thing, so finding a model that stores well (ala! remove the batteries!!) would be good, as well as low start up costs.

Range required.... maybe up to 5 miles or so.

Any CB radio/2 way radio would work I guess...

so, what is recommended?

Thanks!

I predict the real losers here will be legal HAM's & CB'ers that have local cops with an attitude, without training & equipment, and with complaining neighbors that irritate the cops with incessant whining......the legals will take a hit unless prepared to spend $'s to debunk. The original intention may have been good but, alas, as with many regulations just another example of lawmakers feigning sincerity but really wanting visibility.....they could have funded agents but that would detract from funds used to buy votes.

Have a Great Day,
Ken

Here a classic one where he runs back to the amateur news group like a grade school boy sharing his fun filled day on how fun it was harassing a CBer..... What a winner.

On this post he couldnt even tell the difference between a Icom and a Yaesu
on the CBers web site. Brilliant, I hope this guy isn't the best HAM has to
offer.

This looks like some of the posts on the new law in rec.radio.cb

It is this "you're gonna get it too!" stuff that indicates, in my opinion,
that the CB guys are paranoid and looking for allies.

I do not think any laws are gonna be made without local amateur operators
getting their voice heard in the process.

Mostly, it is the violators who complain about the law. I even had one guy
in the CB newsgroup say that he didn't care, that hams were @#$%%^^), and
that he would operate illegally forever.
The guy even has a website for his "hobby", showing his Icom HF rig on 11
meters and has SSTV screenshots displayed on it from as far away as Africa.
you gotta see it to believe it.
Incredible.
Below is the website

When some of the posters to this NG become assets to it, as many others are,
we will all enjoy it more.

Anyone who defends themself to me is wasting time. I don't care what YOU
do...I care about the newsgroup. I suggest all of the whining be moved to
the telephone...or better yet...choose your weapons, start back to back,
take 8 paces, turn, aim , fire.
We have new people here who need help...why dont the fussers take out time
and make ONE constructive post to a newbie or some other inquiry?
OR...You could start your own NG and call it rec.radio.amateur.whinebabies

They abolished 904 Mhz C.B in Britain last year and there are now 80 channels
27Mhz F.M only.

>to be able to hear.

No, the Russian Woodpecker was a mind control signal aimed at the West. What effect if any it had is unclear because it is all classified, obviously our guys want to keep the technology secret so that we can use it, apparently we used various stuff in the Gulf to try and get the Iraqis to surrender more quickly.

The woodpecker was not a Jamming signal, it was much to powerful for that.

>I say again, only illegal operators will be penalized.
>
What a hypocrite. Did you not try to sell in this newsgroup a
Radio Shack radio that you advertised with the 858 PLL?
You implied that a CB'er could mod this to get more channels
but now you complain about illegal operation.

Can you say hypocrite.

338. Re: The big take over

>enjoying radio, I don't think there is any reason for hams to be jealous.
>Jealous of what, total chaos? Give me a break..

You need to run better equipment. There is NO major splatter
problem on 10 meters. I can only speak for my local area however
even during skip condition there is NO major splatter problem
(excluding foreigners). All this is said even though I live in a major
city.

Get better equipment. It IS the fault of your receiver.

I agree, Tnom! Crappy receivers. One of my hammie buds lives less than a mile away and blows serious smoke, don't even know he is operating unless I go looking.

>".....maybe amateurs would like to shut me up.....">,....N8wwm attempted to muse, as the bile colored drool dribbled forth from what once could be construed as a semi-recognizable and cognitive form that doubled as the only communication the monstrosity had ever known, his own Gluteus Maximus, which had somehow, now found it's own demented and foul contorted path to the oral passage.

Why would they? We, uh, THEY, are laughing at you. And stop pleasuring yourself to my posts.

Uh, I don't think anyone in this ng would use the term "we" and have you considered. Since today's dose of Prozac and Lithium has you focused on the finer merits of the ng, please refrain from utilizing the word "we", as no persons on this ng would consider YOU, a "we".

O4AT trade proposal...

Hi Steve

I have a MINT Radio Shack TRC 457 base ssb unit. It was made in 78!

Has the Uniden 858 PLL chip. I also have the SECRET CB modification info for this radio, The radio itself has NEVER been opened up. It works and looks like new. Comes with a RS amplified base station mike ta boot!

I would take $50.00 cash and the 04AT for it, if the HT is in good shape. Obviously we would each pay our own shipping.

Greetings!

Your brining up numerous different ways to justify your position. Each one just confuses the issue even more. So let's stay of track before I have to start filtering this stuff out because I get tired of reading it.

I hope you caught the other posts regarding your errors - good.

The simple fact is, if you're a Ham, caught running a Yeasu or any other non-type-accepted radio for CB use for freebanding or CB Band, you're busted. Period. End of Story!

Freebands the same way.

My grind with the new law; It all depends on how the local councils' deal with writing up ordinances and restrictions. You're still busted if you're legal and cause interference unless the FCC tells them otherwise. The timeline is screwed up here.

There is a problem with that specific clause in the legislation, and thats allowing local governing bodies to dictate the terms on whether you use a radio or not for CB use. An Amateur on CB band, licensed for General band allocations or above in privledge, still has to follow those same rules. Your not licensed for CB bands, so therefore it falls into that catagory, you can still be busted.

If you run 4 watts, with a type-accepted CB radio, and interfere, you have the FCC behind you. If you run more than 4 watts and it's not type-accepted, your out of there. It takes 6 months to figure it out though.

Amateur or not, you're not an Amateur if you're off your licensed band - you're busted if you don't qualify with the preceeding paragraph.

IT's not a loophole, you're illegal even though you have an Amateur license and operating out of your bands your licensed for. SO, if you're concerned about my attitude towards Hams - as long as we stay on our own turfs, whats your problem?

IF the locals decide you can't have the radio there for FEAR of interference is my grey issue. I'd like to discuss this, but it seems that no one is working the fine lines here.

Greetings!

Ok, thank you for answering the question...

I was holding out to see if you had something that I would be able to
try in a kit form.

I'll just go to the site and order the breadboard version, I just
don't have access to a PCB etching machine and drills needed. I'll
just buy their board if they have any.

Just has to wait until after X-mas.

>Jim

This is interesting, if I was a Cop, I would probably do the same, however unlike most Cops, I would test the equipment to see that the output was clean.

If I was in charge of purchasing equipment I would never buy none type accepted equipment because it would then become official policy for the whole P.D to break the law.

If this happened in my area I would monitor the Cops transmissions to make sure that the output was clean and then write to them warning them of there violation and the dangers in using non type accepted equipment, If I got busted unfairly by the Cops in the area I would certainly mount my own private criminal prosecution in this regard, I would represent myself in court because it would appear to be an open and shut case, all you have to do is prove that they were using the equipment and cite the relevant statute.

This is of course one reason why a P.D should never use non-type accepted eqipment.

Greetings!

Hey Scott, thanks for stopping by.

I know of the link you're talking about. Some of us up here like to impress the ladies around the campfire by reviewing this link before we go out on a date. It's for "parking" reasons. No, we won't get into here of course, but you get the idea. <nudge, nudge> Them solar-night light-shows can add an "air of ambience" to the moment...

The www.spacewather.com site has got a better, general to-do list for those that wonder about them lights up there. So, if one thing don't work out, at least you have other things to look at while waitin' for that right moment...

Them' lights in the sky, can get real neat to talk about over the slow, low hiss and the occasional pop of the cracklin fire.

However, I won't ignore http://hubble.stsci.edu/ either. Got some neat pictures there too - always cute to see them on a backdrop while mousing around Windows.

Ladies always like a smart man a courtin' them, so have your facts handy by visting them sites above...

...let alone the Dad asking all kinds of questions about the date later...keeps them busy with heavy book readin'...

Now you know why they call me "Handy Andy"...

Scott! You dirty-dog, Gosh-Darn-it! Can't be givin' away all my secrets now - can we!

On Sat, 02 Dec 2000 18:27:45 -0500, while the modem was pondering it's navel, "Scott (Unit 69 Chesapeake Bay)" <upplus@hotmail.com> dissertated the following:

From: JR <jr@some.net>
Message-ID: <3A2A6FA0.25B886E6@some.net>
Source record: 61812

The radio I use in the 10 meter band is a Collins 75A-3 tube type which is 10 times better than anything you have ever used. It doesn't matter what kind of radio is being used, if some cb idiot's spurious emissions are falling within the 10 meter band you are going to hear it, period.

The Packrat wrote:

> Stop using cheap radios in the 10m band then.

If the spurious emissions are falling within the 10 meter band, then it has nothing to do with the type of receiver, good or bad, you are going to hear it. Again you show your ignorance.

Lame...thanks for playing though.

Hey go to the new site www.tnom-scottiekins-twisty.com

See them in a sexual 3some.

Hear a 3part harmony singing "mercy me them hammies this them hammies that good buddy"

See a painting of a toxic waste dump, titled "11 meters"

Hear the freaksome 3some sing "Convoy"

See a clip from their upcoming MTV video
"Warming my butt on a big leeenyer"

And best of all...see the tripped out trio talk skip while in a daisy chain!

Hurry! this site will be closed soon and you will then have to buy the CD!

If you want the CD now just go to
www.N8WWMisgreat.com

Major credit cards accepted.

Some of these guys ARE spurious emissions.

380. Hello Allen/ Hy-Gain 5 element beam

Newsgroup: rec.radio.cb
Date: 2000-12-03 00:00:00 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3A2A5CD3.21C9D210@qnet.com>
Source record: 61816

Hello Allen: Your e-mail address is bouncing again.

Your asking to many questions to get answered this way.

The 5 element Hy-Gain can be converted from 10 meters to 11 meters. The boom length doesn't need to be modified. But the element length needs to be lengthened. Hy-Gain used 7/16 Outside Diameter (OD) .058 or .065 wall thickness aluminum tubing, as the out side or end pieces of there beams.

The 7/16 aluminum tubing can be purchased or ordered from a metal supply house. But you may not get to pick what wall thickness they carry. The lengths of tubing come in 144 inch / 12 feet lengths. So a 72 inch piece would work well, as a element end. With the extra length inside the 5/8" center piece of tubing.

Sometimes 7/16" aluminum tubing is hard to find. By cutting off the swaged reduced neck end, off the end of the 5/8" tubing, about 4 to 5 inches long, you can then use 1/2" diameter tubing which is easier to find. That will telescope into the 5/8" diameter tubing, with the swaged reduced end cut off. With a fine toothed hack saw, cross cut 2 cuts approx 1 inch into the end of the 5/8" tubing that just had the reduced swaged end cut off.
Now the element will can be a extended the 4 to 10 inches with plenty of reserve length inside the 5/8" tubing for extra strength. Use good stainless steel hose clamps. If the clamps are tight, and the inside tubing is still lose, or can be turned by hand, it ain't right.

The Hair Pin or Beta Match, will half to be retuned. But no big deal using a MFJ Antenna analyser. The cost of one of these antenna analysers will save to 10 times the grief without one, and you can always turn around and sell it after words.

Leave the stock Hy-Gain Balun there, its bullet proof, and has insignificant insertion loss. The Beta Match wires do have loss in them, but modify the antenna first with the longer elements, get in tuned in and check its performance, before changing or up grading the Beta Matching wires and lengths. If you change more than one thing at a time with a antenna, you are opening up the door for massive headaches times 100, which equals beam antenna in driveway, run over 759 times by big truck. Take it to the bank.

The Beta Matching wires can be replaced with 3/8" solid aluminum rod, which will fit into or telescope into 1/2" aluminum tubing, with a .058" wall thickness. This telescoping length adjustment will allow you tune the antenna for a dead nuts on SWR of 1 to 1.0 at your frequency, with a reduced loss. Cross cut into the ends (4 cuts totally, or 2 cuts with a

saw going thru both sides) of the 1/2" tubing to allow a small hose clamp to tighten down on the 3/8" rod.

The 10 KW balun will take 5 2.4" Torrids with 6 gauge wire, with additional teflon insulation. I am making one. The cores are 20 bucks each.

Look at the ARRL Antenna Book for the HF Beam Antennas. Its a great reference.

Jay in the Mojave

IF IF IF.....What I am saying is that there is NO major
spurious emissions problem falling within the 10 meter band.

However, if you run cheap equipment you may get unwanted AGC
activation, unwanted mixer byproducts, and overloaded RF amplification
byproducts. All of which cause a mistaken belief that your receiver
noise is caused by the spurious emissions of someone else. It is not
caused by this. It is the fault of your receiver.

To quote you: "Again you show your ignorance."

An interesting, if not effective troll designed to cause problems between Cbers and Hams. A short course in English as a second language would allow you to present a cogent argument and enable you to find words other than Anglo-Saxon terms to state your position.

388. UPDATE - BAD GUY Alert Jerry Pippins

Newsgroup: rec.radio.cb
Date: 2000-12-03 00:00:00 UTC
From: N6TGK <n6tgk@home.com>
Message-ID: <axwW5.33341$I5.557571@news1.rdc1.sdca.home.com>
Source record: 61824
Cross-posted to: rec.radio.cb,rec.radio.amateur.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment

I posted a "Bad Guy Alert" here about a week ago concerning Jerry Pippins (aka cbnut24 or cbfixxer). I stated that he was supposed to ship me a Uniden HR-2510 in exchange for my BC895 Trunk Tracker.

Jerry claimed to have shipped the radio on November 13th, I shipped the 895 on the 14th. He got the 895 on the 21st of November. On Thanksgiving day I started asking him where the 2510 was and he came up with a bunch of excuses as to
why it wasn't here. He eventually responded, "Don't be a whine ass, you'll get it." After that, his e-mail address was no longer valid.

On December 2nd I FINALLY received the 2510...postmarked Nov 30!!! But that didn't bother me. At least I had finally gotten the "excellent condition... you'll love
this radio" 2510 that Jerry promised me. Upon opening the box and digging through the packing I found a PATHETIC looking 2510. The case and face plate
was scuffed up like you wouldn't believe. The power plug on the back is broken and
pushes back into the radio whenever you try to connect the power cord, the accessory
plug has epoxy all over it and someone added a speaker jack and did a very poor job
of it. Upon removing the covers I found that the back part of the display was melted
because some MORON removed the original lamp (probably burned out) and replaced
it with a HIGHER wattage lamp. This lamp melted the display to the point that the
lamp will no longer stay in place. Wires have been snipped and slodered to other
locations, obviously an attempt at doing some kind of modifications. There are cold
solder joints, large globs of solder and someone added a small PCB board to the underside
of the RF board and is being held in place by pieces of solder. I have no idea
what this board does. The radio smells like smoke and has the hint of burned components.

I obviously didn't get a fair trade since my 895 was in NEW condition and this 2510 is probably only good for parts.

Avoid this person if you can. I was able to find some feedback about this guy on Yahoo! Auctions and his feedback was very poor. He's still holding to the pattern from those posts: ships late, has several excuses and doesn't send what is promised.

Jerry... if you read these news groups... thanks a lot liar.

389. Just got back from a CB CRUISIN' Adventure! (a Novel) (Classic Spewage)!

Newsgroup: rec.radio.cb
Date: 2000-12-03 00:00:00 UTC
From: Dave or Debby <truth@planetc.com>
Message-ID: <3a2a8a68@news.planetc.com>
Source record: 61825

Yep, I did. Drove a '57 Mercury from OH to NC with my last in stock $40 108" whip on the Valor 219 top bumper mount and 21' of 58 Belden 8259 coax last Tues. through Thurs. I just threw any CB I could grab on the seat (maybe not tuned up), because I had already packed the car & couldn't find nothing better. The Mercury had a crushed in roof and broken windshield from a BIG oak tree that fell on it during a Tornado windstorm in the last month or 2, and Miraculously only damaged the windshield and roof. Debby in my car following, with 108" whip on the back pass. side, and no heater for me, and a Plexiglass replacement for the window that kept falling in after the silicon let go. NO WIPERS also. So with the little snow I encountered in the beginning, the rain and wind, from the top of I-77 (271 & 90) in Ohio, to Ripley WV is all we got the 1st night. NO headlights--maybe the tree broke the 57 fillaments? Then after stopping in Ripley, the Generator light came on, and stayed on after car went off (once)! Then the next day it came on and off later on, and then back on. I remember from my trip from HY-GAIN in Lincoln in the 62 Chev. Carry All Van (what the Greeser Yuppies use to drive before SUV's) I got there in '77 (also got this car there too), on my way to Ohio from there when the GM Generator light went on, discharging my battery in 8 hours or more, I could tell by the transmit meter on the CB the condition of the car battery! So I used the CB transmit meter to see how badly the battery was going down, and it didn't until near the end, when I was afraid to shut the car off in the last 2 hours of the trip. (My digital DVM was under stuff in the back seat).

Second night made it to the bottom of VA, going through CB Jungleland @ Wythville interchange @ dusk. I was driving in and out of the cold front passing through, which was a pain because of the rain & wind pushing the plexiglass down, and me stopping ever once in a while to fix it. I got a little wet from this, but not much, keeping water out of the MINT stock interior. So right before I was going to get off @ exit 14 truckstop, a trucker seeing my 3 parking lights on the front top of the duel light fenders on instead of headlights, and said to get off there & get headlights @ the small truckstop. I tried to take one out, but needed my right angle phillips to get to the bottom screws, which was builied in my toolbox, so I gave up and hit the hotel across the road for night # 2. Next morning got going and saw great view @ the NC line where CB's can talk forever distance ground wave for many miles, exceeding the commies limits I'm sure w/ 4 watts! The Lord protected me from the BEARS, because IF in seeing that plexiglass window, I'm sure that big dollar $$$$$ signs might pop up in their eyes, but just to see the car with a crinkled in front fender a bit might of kept their eyes away from the window looking at this black & white MintMobile! Also a few truck drivers marveled at the car/ roof dent/ window on the trip. Because I used THE best (108" whip) I got the drivers attention big time--2 cars in a row, behind each other, going 50-60 mph down

tank trail 77 without heat, sipping hot chocolate in my hooded winter coat, talking on the CB and listening for the BEARS ! I figured if I could make it out of Ohio, I could make it, which I did. The guy that bought the car said he didn't think I would make it; I told him it was a Miracle--many Miracles from God involved.

I told the guy I wanted the damaged roof back--maybe I can sell it to someone who wants to run his magnet mount on it as a Base antenna! ALL parts sold seperately! So after that we head back to TN and the base there. The guy that bought the car said that once he and his wife brought back a car from PA, and never would do it again. We won't either. He has an Edsel farm, an old Ford junkyard, and a bunch of other goodies. All missing 9' whips, though. I took the antenna, mount & coax off and barely squeezed in in the full '89 Pontiac. Do you know how great it felt in the winter cold (30-40 degrees most of the trip) to get out of the 57 with NO heat, and into the 89 with heat? 30 year technology shock. Actually the 57 has everything a new car has (except pooter), except the heat and better milage technology. I figured after Y2K I could sell it so I don't need another Y2K staff car! But maybe I buy it back in da future (IF I get the $$$ from being the smallest on line CB shop when I sell items from this story and others, 1 piece at a time!). It sure was great going 80 in it going down the PA turnpike a couple of years ago in the summer, with all windows rolled down, CB blarring asking the truckers how fast am I going, since the speed-o-meter was broke!!! If I would of been in NYC I would MOW DOWN those BIG Bad Apple Trees there (BIG Oak tree fell on it)! Actually I was thinking that this great OIL BURNING never rebuilt engine would be the best to RUN DOWN gore out of office in FLA ! I don't think it would make it to FLA, just OH to NC and that's it! If I encountered any "Key Downs" I would definately WIN with my 108" whip and my stock 29 CB ! So you big power boys and yo overmodulated modulation kit installing worst CB butcher shops in the country, watch out! A 50's car may be comming to yo keydown one of dees days to mow yo down!!!! I still have 1 left!!!!
Dave!!!!!!!!!!!!!!!!!!!!!!!!!!!! (all items sold seperately. E mail truth@planetc.com for any inquiries starting tomorrow!!!!! Put CB in the subject line.)

Pee Elmer FUDDY Duddy:
Actually you are misguided and a little OFF FREQ. here.
First of all, we need to get the FCC to CLEAN UP the 52-890mc Video POTTY band first. Then, the clenliness will "trickle down" to da Hambos, and den to da CB'ers. With Hollywood's COMMUNIST controlled actors, pouring out FILTH and immorality for years, don't you think that the CB'ers and da Hambo's are just being brainwashed by them in parroting what they hear on the TV and repeat it on the CB and Hambo bands? LET's CLEAN up the SOURCE, instead of going after the little people out here! Also I believe YOU may be stepping on THEIR 1st Amendment rights in talking against their "what am I putting on your meter, HAND?" I believe this is covered under the 1st AMendment, you pinko! You must be obviously FOREIGN to CB, since the term "GOOD BUDDY" went out in the 70's or early 80's, when the SODOMITES (faggots, perverts, queers) took it over in the rest areas of the tank trails and the CB band! Your last line seems to say that Hambos are Sodomites too? I don't know any who are. BUT what about those LOW WATT overmodulated modulation kit tottin' running idiots? Are you going after dem too? Or are they OK because they are under 3 watts? Maybe YOU need to repent and CLEAN UP your POTTY MOUTH, before you can go after dem BIG Power boyz!
Everyone has the belief that you HAVE TO run big power to BE HEARD. This unfortunately is TRUE. This origionated in da HOOD by da Bros. and spread to the truck drivers. The only reason WHY there is a problem NOW is that da BIG POWER Boyz and dem base stations are causing TVI on dem 52-216 mc potty bands, so that the communist actors can't get their FILTH across to the American public. Actually dees boyz are doing a great patriotic service in causing people to stop watching the FILTH on dem freqs., Mr. Elmer FUDDY DUDDY FREAK ! Handy,

It would seem that if you are running a legal CB, IMHO, they couldn't preclude your use of it on the above basis. In other words, City Council couldn't enact an ordinance *banning* their use. The citizens' authority to use a CB still comes from FCC/federal regulation, and as long as you are using one within those regulations, they couldn't do that. The new law, as I read it, doesn't *seem* to allow that--only the enaction of ordinances to deal with <illegal> interference. That was what caused the new law to start with--complaints to congressmen from the folks back home about CBers coming in on their TVs and church PA systems. I might be wrong, but that's the way I read it.

Hmm ... the spelling and grammar are familiar. Is this Hotrod posting? If it is (and I suspect so), the reason you are here causing grief is that you've been banned from every CB board I know of (at least the ones that didn't shut down because of you). I assume you have discovered Juno, Freelane, and lord knows how many other free ISPs so your ISP numbers won't give you away. You don't need to get anyone's ass - you need to get a life!

Jim AA2QA
ps - consider desisting from harassing the CBers - hams have enough problems of their own.

From: JR <jr@some.net>
Message-ID: <3A2A8E0C.3AB7329F@some.net>
Source record: 61836

Maybe I can explain this so even you understand it. It has nothing to do with the quality or lack thereof of the receiving equipment. My Collins 75A-4 and S-Line equipment is better than anything on the market today. Hardly cheap equipment. I am not hearing interference from some station running high power a few doors or a couple of blocks away. There is a ham only a few blocks from me that can run the legal limit. I can be on the same band when he is transmitting and be tuned within a few KHz of his signal and never know he is there. So the problem is not with front end overload, image rejection, intermod products, unwanted mixer products, ect. The problem is that these cb morons are putting out spurious emissions that fall within the 10 meter band, and no matter how good or bad your receiver is, if the signal is in the 10 meter band it is going to interfere and it is not the fault of the receiver. It is the fault of the moron operating the transmitting equipment.

Then you didn't read the actual law.

The law STILL reserves for the fed all rights of enforcement.
It only grants to the states or local governments the ability
to write ADDITIONAL laws that ALSO enforce the same
thing. If a state law is at variance with the fed, then the state
law is not valid. EXCEPT that a state law that is LESS
stringent than the fed is valid. Anything the states do that is
IN EXCESS of the fed would be found to be invalid as the
fed did NOT grant the rights to enact any new laws.

The federal law does NOTHING to change existing law as
far as enforcement goes at the federal level. All it does is
allow lower jurisdictions to pass EQUIVALENT or less
stringent laws that are SUBSETS of the federal law.

And the new law is VERY explicit that it does NOT pass
any rights to the states with regard of giving up federal
regulation.

If I was in charge of the FCC, I would use my budget to listen for and prosecute the slightest violation no matter how small.

Nearly every Ham and C.Ber makes some sort of violation at some point and by prosecuting each offender on trivial matters I would drive them out of the hobby in much the same way as the BATF are doing to gun owners and dealers.

We dont want the people to have guns or a means of communication that we cant control, it's best to persecute the ordinary citizen into submission and have them dependent on the government for everything.

When it comes to communications at sea, the International Maritime Organization, a United Nations organization based in London, carries more weight than the ITU. And the predominant IMO treaty document affecting maritime communications and other marine electronics is the Safety of Life at Sea (SOLAS) Convention (the US is a signer).

Up until just a couple of years ago, the SOLAS Convention required Morse Code capability for all SOLAS vessels. However, after several studies world-wide, it was decided that Morse Code was no longer necessary for reliable ship-to-ship or ship-to-shore communications. At that point, it was decided to amend the SOLAS Convention to drop the code requirement.

In fact, concerned about the possibility of confused distress communications should one vessel continue to use code while others no longer had the capability, the amendment actually went further to restrict code as a international distress mode.

Since the IMO was the last U.N. organization with any Morse Code requirement, there is nothing still prompting the ITU's Morse Code requirement. When it comes to Morse Code, the "reservoir of trained operators" incentive no longer exists. Therefore, it is highly likely the code requirement for amateur radio will be voted out without discussion or objection. When that vote will occur is anyone's guess.

By the way, both the FCC, and the Coast Guard, strive to fit domestic maritime communications into IMO standards also, where possible.

Good for you, but I was not speaking for you. I said I hear NO major
problem with spurious emissions. I never said spurious emissions don't
exist. The thread was about the overall 10 meter spurious emission
problem. Not your specific problem.

I regularly hear splatter and spurs on 29MHz. I have traced the origin of these signals to high power stations using 27.025, often in distant locations from mine. My Icom 756 is not what you'd call a cheaply designed receiver.

Neither. You state a 'FULL WAVE' center-fed dipole. In this case, the dipole impedance would be on the order of 1000 ohms, resistive. It could be fed with a match, but you will have your deepest nulls running North/South and some minor nulls running East/West. You maximum lobes will be running in a pattern reminiscent of a cloverleaf and peaking somewhat under 45 degrees, somewhat over 135 degrees, somewhat under 225 degrees and somewhat over 315 degrees. In other words, the pattern will be 'stretched' a bit towards the North and South from an 'X' running in the middle of the four quadrants. If this was a trick question, that should be the answer. If you meant to say a 'full half-wave dipole' (a conventional, unshortened dipole), then the maximum radiation would be at right angles to the antenna (ie; East - West). Also, the impedance would now be on the order of 70 ohms depending upon ground and height over same.

This makes you wonder why HAMS give us sh!t about using non
type-accepted equipment. Nobody told him about the illegality
of this, but told him how. If we answer a request for information,
stuff is rammed down our throats by the 'visitors'.

From: shevett@pobox.com
Message ID: <90ck16$c0m$1@nnrp1.deja.com>

Evening folks!

I fear I am in a similar position as many other hams. My SO does not
yet have her ticket, though she does say she'll get it at some point.
We have many events coming up that i'd like to be able to participate
in, but also be able to keep in touch with her (we have a toddler with
us, so staying in touch is important).

I recently got my ticket, and I'm investing in hardware now. I'm
wondering if there is a way I can equip her with a radio that does NOT
require a license, and be able to talk to her through an HT I carry -
while also allowing me to work with other hams on my HT.

An FRS radio would be a great idea, except I know of no HT (2m/440/etc)
that can talk on FRS as well. One of the options I was thinking of was
using a 'commercial' band radio (one of the motorola-class units) that
sits very near the standard 2m bands... would this be a) legal, and b)
possible?

I'd need an HT that allows me to 'monitor' for activity on one frequency
while being actively tuned to another, so if she did key up it would
'break in' to whatever I was doing and I could hear her.

Possible? Probable? Please let me know!

Why a full wavelength? Make it a half-wavelength and it will match to 50 ohm coax, otherwise you will need to use an antenna tuner.

Source record: 61864

Well, I've stated I'm getting old. In my enthusiasm to pick up on the words 'full wave dipole', I neglected that the thing would be center fed, and the currents (although over a full wavelenght) would be running in the SAME direction. This means that yes, the radiation would run East - West. If the full wave antenna were fed from the end, then the current would NOT be in phase along the whole length and my previous post WOULD be correct. The impedance to the antenna, however, will be around 1000 ohms and will need a matchbox and probably need feeding with ladder line (coax will get lossy with a 20:1 SWR). Oh well, ya can't win 'em all!

While I hesitate to get involved in inane arguments, I have watched you, who purports to be a ham create hate and discontent on this newsgroup. What in the world is to be gained by this practice? Many of the hams here would like to be of assistance to anybody that has a desire to become a ham. I would suggest you follow the example of thumper rabbit, "if you can't say something nice, say nothing at all". You appear to attribute to ALL CBers the lawlessness of the few. I think this does little to foster any understanding. Please take a moment to re-read your posts before sending them, ask yourself, How would I react to receiving this message?

Source record: 61866

The reality of this is that decades ago this was going on with the wives using some ficticious call so they could talk with their hubbies on amateur radio repeaters. Truth is, even if a CBer were on the ham band (illegally) the ham cannot legally contact the unlicensed user to chase him away (illegal to communicate with non-amateur stations with a few minor exceptions). Oh well ...

<< What I am saying is that there is NO major
spurious emissions problem falling within the 10 meter band.

However, if you run cheap equipment you may get unwanted AGC activation, unwanted mixer byproducts, and overloaded RF amplification byproducts. All of which cause a mistaken belief that your receiver noise is caused by the spurious emissions of someone else. It is not caused by this. It is the fault of your receiver.>>

I regularly hear splatter and spurs in the 29 MHz band segment coming from (dx) operators on 27.025 MHz. My Icom 756 is not a cheaply designed or constructed receiver.

Your pattern would be to the east and west, at 1 wavelength the elevation pattern would show major lobes at 15 degrees and 45 degrees.

This above pattern is what I originally guessed it would
be.(cloverleaf) However I did not trust my memory so I looked
it up. The correct pattern is not a clover leaf. It has only two
lobes. One east and one west.

>If this was a trick question, that should be the answer. If you

As long as the one wave length antenna is fed in the center the two
lobe pattern will occur. If the antenna is fed at the end, or a
quarter wave from one end then the clover leaf pattern will occur.

Because with this config the antenna is voltage fed. Being so it needs
some method of matching even if it is a cut to the correct length for
the frequency in question.

I have heard these signals around 29 meg, but only when I use a CB
type radios (10 meter stuff) When I switch to a more advanced design
they disappear.

What I.F,s does the 756 use? Just because the 756 is a modern
deluxe rig does not mean a locally strong signal can't directly
infiltrate into an I.F. mixing process and show up as noise
on the receiver.

thanks guys for the responses!! i have checked voltages on the mb3756 which is the voltage regulator everything is o.k. on it. the voltages on the mb8719 are off especially on pin 1,2, and 3. i have changed out the loop mixer transistors. but still no loop mix signal or no clarifier. the l-19 vco when adjusted will change frequencies like it suppose to but the channel selector will not changed channels and that i think is because of the loop being unlocked. if you can still help we'll definately appreciate it. if we can be of help to some some time just e-mail me. 73s

Your really funny DX401, you fit perfectly in the cb crowd. Welfare? Get a job? Well, I spent over 40 years in the electronics and computer industry, and now have a nice comfortable retirement and a net worth of something you can only dream off, a great family of children and grandchildren, and unlike you, I have never been or welfare. As far as letting come cber kiss my you-know-what, well that will never happen, I don't want to get it dirty. Dream on loser.

What purpose is served by imputing all CBers? I suspect, even if I can't prove, that CBers as whole follow the same curve of normal distribution as any other population.

That is to say 7% will break any regulation that may be proposed by God himself, 7% would not break a regulation under penalty of death and the rest fall somewhere in-between, Your generalization to the contrary. Based on these mathematical observations, I can only conclude, as should all others on here, that your sole purpose is to troll.

WHERE are the Antenna Pole-leece when yo need dem?
Dave!!!!!

Jay in the Mojave wrote in message <3A2A5CD3.21C9D210@qnet.com>...
Hello Allen: Your e-mail address is bouncing again.

Your asking to many questions to get answered this way.

The 5 element Hy-Gain can be converted from 10 meters to 11 meters. The boom length doesn't need to be modified. But the element length needs to be lengthened. Hy-Gain used 7/16 Outside Diameter (OD) .058 or .065 wall thickness aluminum tubing, as the out side or end pieces of there beams.

The 7/16 aluminum tubing can be purchased or ordered from a metal supply house. But you may not get to pick what wall thickness they carry. The lengths of tubing come in 144 inch / 12 feet lengths. So a 72 inch piece would work well, as a element end. With the extra length inside the 5/8" center piece of tubing.

Sometimes 7/16" aluminum tubing is hard to find. By cutting off the swaged reduced neck end, off the end of the 5/8" tubing, about 4 to 5 inches long, you can then use 1/2" diameter tubing which is easier to find. That will telescope into the 5/8" diameter tubing, with the swaged reduced end cut off. With a fine toothed hack saw, cross cut 2 cuts approx 1 inch into the end of the 5/8" tubing that just had the reduced swaged end cut off.
Now the element will can be a extended the 4 to 10 inches with plenty of reserve length inside the 5/8" tubing for extra strength. Use good stainless steel hose clamps. If the clamps are tight, and the inside tubing is still lose, or can be turned by hand, it ain't right.

The Hair Pin or Beta Match, will half to be retuned. But no big deal using a MFJ Antenna analyser. The cost of one of these antenna analysers will save to 10 times the grief without one, and you can always turn around and sell it after words.

Leave the stock Hy-Gain Balun there, its bullet proof, and has insignificant insertion loss. The Beta Match wires do have loss in them, but modify the antenna first with the longer elements, get in tuned in and check its performance, before changing or up grading the Beta Matching wires and lengths. If you change more than one thing at a time with a antenna, you are opening up the door for massive headaches times 100, which equals beam antenna in driveway, run over 759 times by big truck. Take it to the bank.

The Beta Matching wires can be replaced with 3/8" solid aluminum rod, which will fit into or telescope into 1/2" aluminum tubing, with a .058"

wall thickness. This telescoping length adjustment will allow you tune the antenna for a dead nuts on SWR of 1 to 1.0 at your frequency, with a reduced loss. Cross cut into the ends (4 cuts totally, or 2 cuts with a saw going thru both sides) of the 1/2" tubing to allow a small hose clamp to tighten down on the 3/8" rod.

The 10 KW balun will take 5 2.4" Torrids with 6 gauge wire, with additional teflon insulation. I am making one. The cores are 20 bucks each.

Look at the ARRL Antenna Book for the HF Beam Antennas. Its a great reference.

Jay in the Mojave

Source record: 61895

Greetings!

Whew! No flames! Ok, let's see about what's going on here...

...[continuing]...

The way I see it, as I was looking for a house with my now x-wife, we came across a few CCR's enacted and supported by local townships.

They restricted the housing developments to only cable, phone - no TV or any other arials allowed. We questioned this and found out that the people who own the land these individual properties were being built on, are the ones that set the rules. Much like a condo association.

At first I thought it was some type of rip-off scam to sub-lease land to fool people into thinking they were owning not only their house, but the property too.

As we dug around to find a house to settle in, we found better locations and are in the boonies far enough away from overdeveloped land. But, it's shocking to find a lot of "large acre" land being sub-leased to people wanting to buy a house, and led to beleive that they are also buying the property.

The contracts these people have to deal with, take an attorney to figure out if it's worth living there or not.

It's been a major concern that with this bill, there may be more "scams" like the above that may actually erupt into a big regulatory mess.

On Sun, 03 Dec 2000 14:18:17 -0500, while the modem was pondering it's navel, Jerry Oxendine <joxendi@bellsouth.net> dissertated the following:

:+> Handy Andy wrote:

Almost every time I tune 10 meters I can hear the spurious emissions
from another
cb idiot who is running lots of power with some splatter box down on 11
meters.

>
>
> When there is 11 meter generated interference it interferes with
> 11 meters. How can this possibly cause any real concern to an
> amateur who has nothing good to say about 11 meters in the

When it splatters up into the 10 meter band it is a concern of the amateur
community.

>
>
> All this whining is more about jealousy than anything else.
> Jealousy of a large number of people enjoying something that
> they can not.

If overmodulated rigs, splattering signals from crappy amplifiers wiping
out
adjacent channels, talking over one another, foul mouth gutter language, and
morons with an IQ of about half their age yelling
aaaaauuuuuuuddddddiiiiiiooooo!!!! for hours into the mic is your idea of
enjoying
radio, I don't think there is any reason for hams to be jealous. Jealous of
what,
total chaos? Give me a break..

>

And why would a ham who doesn't operate 11 meters want to go to 11 meters to argue with a moron who couldn't care less about his interference or illegal operation.

.....If I'm not mistaken, the Armed forces ONLY dropped the USE of CW on a regular basis. There WERE CW nets, drills, and routine comms carried out in CW....THAT's ended.
.....BUT, I believe the REQUIREMENTS for a 1st Class Commercial Radio ticket (and for an armed forces radio officer) still spell out a 25wpm CW minimum.

Mike,

Measure the voltage across the varactor diode used in the PLL circuit at
lowest and highest lock freqs. Then look in the Mfg specs for varactors
that give the highest capacitance change within these ranges. It is also
possible to parallel some of the IF cans with unused windings to increase
their effective range. Capacitor coupling between stages can be improved
via trial and error paralleling on bottom of PCB. Longer or shorter ferrite
cores can be subbed in VCO tunable "can".

The easiest way to get it stable as a transverter host would be to change
the mixer crystal to one in the range of the output IF needed for the
xverter.............

Emabarrasemnt to who? You? Who cares?

To ham radio? Naaahh...Only to people who think they can be criminals and not get in trouble. They are embarrased cuz the light is being shined on them.

I represent me, not ham radio. If the institution of amateur radio is not necessarily in agreement with me, OK...I think most hams are, though. It is those hams who profit from CB guys, and those who are not long past CB days, who oppose my point of view.

This is one person's opinion and nothing more. Maybe other amateurs would like me to shut up...perhaps when they are faced with something they do not like others will wish for them to shut up. So what?

Hey, those who do not like what I say do not have to read my posts.

Whenever something like this gets this much lip service you can bet yer bottom dollar that there is something to what I say.That is what is so funny in the first place.

I say again, only illegal operators will be penalized.

Finally..... Mineral oil or transformer oil which will be hard to find but also may contain PCB's. Best bet is to get Mineral oil at your local hardware store or at larger grocery stores. ATF and motor oils are not the thing to use! If your afraid of transformer oil because of the PCB's then the next best thing is the Mineral oil. You can sometimes go to your local power company and get the new style transformer oil which doesn't contain PCB's and that is the very best stuff to use. They sometimes will fill a gallon can for you at no charge. Next best... Mineral oil. Yes you can mix these also. Some older oil filled dummy loads had transformer oil in them and if you need to add some oil from years of use you can mix it with Mineral oil. Mineral oil is like baby oil but thicker. Do not use baby oil in a dummy load!

Real antenna gain can best be understood by using the gain over a dipole -idea, dBd. People who sell antennas always use dBi, because the figure is more than 2dB higher. If you have a 3dBd antenna, you'll get double the power out. A nice antenna design program for yagis is the Yagimax, which you will be able to find on any ham technical page link. Did this help? 73 Gary

Or if you want to experiment with something a bit more exotic, you might consider trying a 3/4 -wave dipole, which is a cousin of the 5/8 vertical. Real high above the ground. As Richard pointed out, the full wave dipole is way too high in impedance to be used without a tuner, and thinking of the frequency in question, you might end up calculating your feedline losses. Mhhhmmm - you could use a ladder...? 73, Gary

If you have the space and altitude available (envy, envy) you can have all sorts of fun. The ARRL antenna book is a bit expensive but in the long run of things probably a good investment. One of the things about the 25-30 MHz area is that it is at the transition between VHF practices where feedline loss becomes a real factor but a small amount of aluminum goes a long way and the lower portion of HF where one has a lot of real estate devoted to holding up a shitpot of wire.

If you have a favored direction, be the first one one your block to have a Sterba Curtain or stacked rhombics; impress hell out of the natives.

There is probably no other aspect of radio where you can have fun, learn to swear like a cavalry sergeant, and never do much more than scratch the surface. Antennas, love 'em.

Dick N0BK

490. Re: dbi.....explination?

Newsgroup: rec.radio.cb
Date: 2000-12-04 00:00:00 UTC
From: Jay in the Mojave <jay123a@qnet.com>
Message-ID: <3A2B5168.F38BE2D4@qnet.com>
Source record: 61745

Hello Mark: The first antennas used this figure dBi as a analytical or computed way of comparing antennas. It is a good comparison method, but requires some figuring to reach.

dBi is a reference to the amount of energy being radiated in all directions in free space (meaning that no reflections from the ground or anything else is effecting its radiation) they call this a isotropic radiator. The dBi is a mathematical tool allowing comparison of antenna from a analytical method.

As antenna ranges and techniques came into understanding, antennas have been compared to a half wavelength Dipole Antenna, by the amateur radio community. Which is made up of two quarter wavelengths of wire or aluminum tubing. This antenna comparison method is called dBd.

The Dipole antenna is said to have 2.1 dB more gain in it's highest amplitude direction as compared to a isotropic radiator. So if a antenna has 5 dBi gain over a analytica figured Isotropic Radiator or 5dBi, you simply subtract 2.1dB to get to the dBd figure.

Be advised..... The dBi figure is analytically figured, and the dBd can be analytically figured or measured on a antenna range. The antenna under test will be compared to a reference antenna usually a dipole antenna.

It is common knowledge that a lot of antenna manufactures, have their antenna gain figures made up in the advertising department and not the antenna engineering department.

Some antenna gain figures are given without a reference to anything. You will see antennas advertised as having 9.9 dB gain. The 64 dollar question here is, compared to what? A simple dB gain figure it thrown out without any reference to what is compared to, this is just advertisement hype.

Another thing to consider is that the antenna installation can make ya or break ya. Get it as high as you can (keep it away from power lines ect) and use good low loss coax. I use LMR-400, sold at Ham Radio Outlet.

Jay in the Great Mojave Desert.

Hello Elmerpee: Good to see you have come to your senses.

Use good coax, ground your tower, and use a TVI filter. Always be a gentelman with your neighbors and shoot ah lot of skip.

Jay in the Mojave

That's true, but only in cases where the states have the right to
enact laws already. There are a lot of cases where state and
federal laws don't come together.

However, there are a lot of cases where enforcement of
specific things was 'reserved' to the fed. This is one of
those cases, and this law is very specific in how it releases
the ability to the states.

I'd have to go look at the final version, but from the 'leadup'
versions, there was language with regard to compliance of
the laws which would limit what the states do.

Mike

Source record: 61913

Greetings!

Well, welcome to reac.radio.cb, there is a lot to wade thru at times, but I did catch your message.

As far as what radios to stay away from, it's easier to look for features and the more features you want, you can narrow the selection down from that list. I'm assuming CB, but FRS is also another option [Family Radio Serivce] but range is more limited and is not covered here.

Pretty much the big makers of CB Hand-helds, are Cobra and Midland.

Radio Shack is also a contender, but you won't find these at a local CB shop - you'd have to visit their retailer.

Cheokee is another - but they are only found on the net.

At this point, Radio Shack, may have a thing or two for you to look at. At least you can go into the store and look at what they have and get some hands-on experience with using them.

If you have access to a local CB shop, this would be a good place to start.

For features - you've suggested battery-powered, with a storage case, or even a leathette pouch for stowage. So, that can narrow the list somewhat.

Other things to look for, antenna connection. Some radios have an antenna permamently installed, while other use a threaded type that allow it to be removed. A combination of both have a separate jack that allows a more dedicated antenna like a regular CB would use. An adapter that converts a Motorola jack to SO-239 for connection to a typcial mobile CB antenna may be needed.

This is what makes the selection a little troublesome. So, take a trip to the local store with the above in mind to help you.

Remember,
You shouldn't transmit on the hand-held inside the car unless you have an external antenna for it. Range is reduced and possible damage to the radio can also result from the radios own interaction with the RF energy being reflected around inside the vehicle.

If you plan to use the antenna on a vehicle, you'll need a separate antenna for the vehicle. A simple mag-mount can work here - the local CB shop can offer an antenna and hints on how to install it.

Power cords, a cigarette lighter adapter usually comes standard, but not always, so look and ask if you don't see one listed on the package.

If you plan on using it on a vehicle, you may need an adapter for the external antenna jack on the hand-held. A CB shop can help you on this.

Look for antenna whips as a possible replacement for the one that is on the unit from the factory. Some can't be replaced or fixed easily. Some come with a "rubber duckie" that is ok for short range, but for longer range, a telescopic whip is needed. This is why I suggest looking for types that have the replaceable or removable antenna with the unit. The antenna can be changed to something more convenient for your needs, or replaced if it breaks.

There is also the FRS line, but that is not covered here, but are available at the links below...

Some links to help you...

www.midlandradio.com
www.cobraelectronics.com
www.uniden.com

A good place to buy them would be..

www.bills2way.com

Give the above links a try and hopefully you can be the informed consumer when you do go shopping.

>
>While you post what I take as tongue in cheek,

O.K, I confess, my plan is a bit weak, what we really need is mandatory licenses for all radio receivers as well as transmitters, a license fee of $5,000 per annum should cover the costs of enforcement. Special Jails without radios or color T.V's should also be built for anyone convicted of having a radio without a license.

>one can invision "Assault
>Radios" defined as any radio more powerful than a police officers
>handheld...

Exactly, just like guns, only the police should have this equipment, we cant allow the public to communicate with each other.

>If the FCC were run by the BATF, homes would be burning all
>over the United States.

We certainly hope so, it would be a pretty sight for the children at Christmas.

>Janet Reno would be seen on TV "Well, it was evident
>they had an illegal antenna and were stockpiling fully automatic antenna
>tuners, we had no choice but to act for the children"

Precisely, we cant trust the ordinary people to have their own antennas, we cant allow children to grow up being self sufficient, if they are self sufficient then we cant control them.

Anyone who has the means to defend themselves and communicate with each other in ways we cant control is a dangerous dissident and must be treated as such.

I hoped that you voted for one of our candidates like Bush or Gore, we control both of them, how do you think they got the nomination of their party without us giving them the money.

We dont allow any candidate to get the nomination who might actually do something good for the people.

Oh, of course we allow people to think they have a choice but WE control all the important issues.

Most people think the important issues are a few cents change in the price of Gas or a few percentage points change in income tax.

This is precisely what we want the people to think.

Whilst the candidates we control are squablling about a few things we dont consider important, we can get on with our own agenda.

The erosion of nation sovereignty and the erosion of fundamental human rights,

We create the Problem (Rising Crime, Terrorism, Gun Crime) and then offer the public the solution (Harsher and harsher laws, new restrictions on firearms)

Already we have managed to Jail over two million of the people, most of them are working for slave wages, this is a good stepping stone to eventually locking up all people we consider to be dangerous.

We rule by fear, people are more susceptible to suggestion when they are fearful for their children.

We want children to grow up used to metal detectors, I.D cards, swipe cards and armed guards, it is useful indoctrination for what we have in mind for them later.

We have to do all this in stages, if we suddenly announced all our plans at once even the bewildered public might stop and notice what we are up to.

The best part about this is that the people are demanding OUR solutions to the problems WE have created for them and only about 1% of the people have any idea what we are up to.

We just label the 1& as kooks, nobody wants to be thought of as a kook and so even the few people who can start to see what we are doing are too scared to speak out.

Already we have one of our Presidential candidates wanting to withdraw all troops from Europe, this is good because the European politicians WE control have already set up a European Army.

Remember what we told the British public, we told them they were joining a free trade area, we called it the "Common Market", then we changed the name to the European Economic Community, when the peoples of Europe got used to that we changed the name to the European Community (Notice how we dropped the "Economic" bit, we were so successful in our stepping stones approach that we did not have to have even the pretense of a free trade area.

Now we have changed the name again to "European Union"and we have managed to introduce a Single European Army and a Single European Currency, except that the British are resisting the Single Currency, the British politicians we control know that if they cant persuade the public to accept a Single European Currency that we will give them a war or economic crisis.

The British public will eventually weaken and give in, they have certainly proved to be stupid so far.

If we dont give them a war we will engineer a deep recession and create high unemployment, then the Politicians WE control will tell them that if they only join the Single European Currency then their economy will recover.

Guess who wrote the treaty that established the Single European Currency that only allows for the members of the European Central Bank to be nominated and not elected?

Guess who controls the interest rates of the Central European Bank, guess who controls the issue of the European currency.

The public will have to accept anything WE decide is legal tender, Smartcards or Microchips, anything WE decide.

When the public complains about the issue of Smartcards to buy or sell anything, Yep you guessed it, the officials of the European Central Bank cant be removed by election because the officials are not elected, they are nominated by by politicians WE control.

Guess what we have in mind for NAFTA?

Remember how we conned the European peoples and the British public into joining what we called a "Common Market" in 1972.

We have already set up a similar con trick called the Australian Pacific Economic Community, "APEC" slowly but surely when we have achieved for NAFTA and APEC what we have achieved for the European Union we will merge them together into one block.

It will take time to do, but we have almost achieved the Coup in Europe, all of this has been done since 1972, now that we will have a successful model in Europe, the American people will fall for the trick as well.

It stands for dB (decibels of gain) over an Isotropic radiator. An Isotropic Radiator is an imaginary comparison representing an antenna with unity gain; neither increasing the radiated power of the radio, or decreasing it. It can usually be equated with a 1/4 wave antenna. Other specs compare in terms of dBd, which makes the same comparison against a dipole. The specs attempt to measure gain against a standard, to keep the figures consistent in determining the figure of merit of one antenna against another.

Clear as Mud?

Hope this helps some..

I use a vertical 1/2 wave Ringo on 6 and have no complaints....
vertical is much better if you are working local mobils..or repeaters.
(its hard to run horz mobil) not impossible but alot of trouble. base
to base operation will do a bit better with Horz antennas. but you both
need to be Horz. and Horz. will usually work closer skip. (a shorter
bounce)

Maybe the radio can't draw enough amps from the power source you are
using, or try pressing the DIM button until the light goes off then
learn to live with it.

While a center fed halfwave antenna at 1 wavelength above ground has an impedance of around 70 ohms (depending on ground beneath it) a fullwave dipole is voltage fed rather than current fed and will require some means of tuning to get the high impedance of the antenna to have a conjunctive match with the radio.

With all due respect, an isotropic radiator is a point source that radiates equally in all directions. It is not equal to a 1/4 wave as we will see shortly. Antenna gains are full of more snake oil than all of the old wagon peddlers put together.

Lets get a few terms in simple language.
dBd = gain over another imaginary antenna, it is a dipole in space. Most of us don't have towers that tall.

A Standard dipole 1 wavelength above ground will be about 5.8dB and we haven't done anything yet! So as not to bore folks on here, if there is any interest let me know and we can continue.

73 Fred W4JLE
Gain is

Bad advice given here, brand name wise. DO NOT buy Rat Shack OR Cobra--most of them made in RED COMMY CHINA and are less quality than a Uniden. Get Uniden Pro-510's and at least 3' magnet mounts from your LOCAL INDEPENDANT CB SHOP in yur phone book under RADIOS-Citizens Band (THE People's BAND). Then you will have quality for the least amount of $$$ invested. The 3' antenna MAKE SURE it is made in the USA or Canada, because if it is NOT, it IS JUNK too that will ROT a hole in your vehicle from the rust that will come off of it! How do I know? I is one of those CB shops with 21 years experience. E mail me direct or post with any other questions!
truth@planetc.com
Dave!!!!!!!!!!!!!!!

Handy Andy wrote in message <6d6n2tkpbuolonpomhbi892k4cr4m1dnct@4ax.com>...
Greetings!

Well, welcome to reac.radio.cb, there is a lot to wade thru at times, but I did catch your message.

As far as what radios to stay away from, it's easier to look for features and the more features you want, you can narrow the selection down from that list. I'm assuming CB, but FRS is also another option [Family Radio Serivce] but range is more limited and is not covered here.

Pretty much the big makers of CB Hand-helds, are Cobra and Midland.

Radio Shack is also a contender, but you won't find these at a local CB shop - you'd have to visit their retailer.

Cheokee is another - but they are only found on the net.

At this point, Radio Shack, may have a thing or two for you to look at. At least you can go into the store and look at what they have and get some hands-on experience with using them.

If you have access to a local CB shop, this would be a good place to start.

For features - you've suggested battery-powered, with a storage case, or even a leathette pouch for stowage. So, that can narrow the list somewhat.

Other things to look for, antenna connection. Some radios have an antenna permamently installed, while other use a threaded type that allow it to be removed. A combination of both have a separate jack that allows a more dedicated antenna like a regular CB would use. An adapter that converts a Motorola jack to SO-239 for connection to a

typcial mobile CB antenna may be needed.

This is what makes the selection a little troublesome. So, take a trip to the local store with the above in mind to help you.

Remember,
You shouldn't transmit on the hand-held inside the car unless you have an external antenna for it. Range is reduced and possible damage to the radio can also result from the radios own interaction with the RF energy being reflected around inside the vehicle.

If you plan to use the antenna on a vehicle, you'll need a separate antenna for the vehicle. A simple mag-mount can work here - the local CB shop can offer an antenna and hints on how to install it.

Power cords, a cigarette lighter adapter usually comes standard, but not always, so look and ask if you don't see one listed on the package.

If you plan on using it on a vehicle, you may need an adapter for the external antenna jack on the hand-held. A CB shop can help you on this.

Look for antenna whips as a possible replacement for the one that is on the unit from the factory. Some can't be replaced or fixed easily. Some come with a "rubber duckie" that is ok for short range, but for longer range, a telescopic whip is needed. This is why I suggest looking for types that have the replaceable or removable antenna with the unit. The antenna can be changed to something more convenient for your needs, or replaced if it breaks.

There is also the FRS line, but that is not covered here, but are available at the links below...

Some links to help you...

www.midlandradio.com
www.cobraelectronics.com
www.uniden.com

A good place to buy them would be..

www.bills2way.com

Give the above links a try and hopefully you can be the informed consumer when you do go shopping.

Jeff,

They are head and shoulders above any other rig of that vintage. The were all American made. They used discrete boards for RX and TX, with interconnects carrying RF and control using construction techniques like used in commercial 2 way manufacture.

The VCO was a little touchy, but when working properly they were a force to reckon with on SSB and offered quite good AM operation. The sets offered expanded frequency range capabilities, and even provided a front panel opening between the dual channel selector knobs for the switch to activate extended coverage. They also provided for a 5 KHz shift modification. The accessory components sold to match the setup offered a real signal preamp, console with counter. and I think even a speech processor.

CPI is today more a collectors rig than one you would buy and use daily. As with all collectible pieces of that era, actual use has to be balanced with repair parts availability. One thing you can count on is they are not making any more, it was rare even when new, and somewhere out there is someone that collects them. That is a formula for appreciation of price. Having said that, any collectible only has a set price on 2 occasions; buying and selling. All points between these 2 transactions fall into the category of speculation.

Hope this sheds some light,

David

rf-man, Megahertz's buddy, has a site at
http://www.geocities.com/CapeCanaveral/Launchpad/8243/cb has, among a lot of
other things, a pretty good background on Echo Charlie. If you have
thoughts of dropping in, be aware that they have a rep for being surly. You
should also be aware that you are fiddling with frequencies that are in use
for transatlantic air traffic control so it ain't quite like squashing
Honest Abdul's Hertz Rent-a-Camel and Funeral Parlor.

all of the above is true.... but with out that third letter (i) or(d) it doesn't mean much.... the A-99 base antenna says it has 9.9 db gain. but they don't say what its based against. I guess if comparing to a beer can laying in the yard with a coax connected to it then yes. it may have 9.9 db gain...

That is only partially correct. Over the years (way back when) it was
determined that a signal will tend to go towards the horizontal as it
strikes objects such as hills, etc.

Horizontal polarization is also less noisy because most man made noise
sources are vertical in nature.

For a purely sky wave path, either polarization is fine.

Actually the BEST arrangement would be to have both Horiz and Vert at
the same time.

: All,
: What is meant by a radio having 3 watts deadkey with 20 watts swing?
: TIA,
: Anthony

Hi Anthony,

As you probably have read, an unmodulated radio signal in the AM mode produces as steady "carrier." That refers to the slang "dead key."

CB Band Radios and Amplifiers are often built or operated so the carrier power moves upward from the starting position when you add modulation (voice) to the carrier. The change upward during modulation is refered to as "swing."

By nature, amplifiers that swing are very dirty (non-linear) in operation. They cause a lot of interference to nearby frequencies. Many operators are more impressed with the rising modulated signal on a power/s-meter than they are with a clean loud signal, hence ... amplifiers which "swing" (often refered to as modulators) are often heard in use.

In electronic terms, the swing one might obtain is producing a lot of distortion to the original signal. You might hear it as a fuzzy edge on the audio of the source station. It actually ends up cutting back on the useful signal which may be heard short or long distances. I will admit it's an impressive sight to watch on a meter, but not as impressive as a clean loud signal of a properly operated station.

Hope that helps

cheers

Source record: 61955

Ah, you took my post as a flame. It wasn't meant as that. The question was could one individual with a license talk to a non-licensed user, perhaps using a modified radio. I should have been more explicit in my reply. Generally, the answer is no. There are type accepted UHF business band radios that can be programmed for a number of channels - and they CAN be reprogrammed to the 400 - 450 MHz ham band. This might be a possibility as long as you had the license for the business band - but it is stretching reality to find a good way to do it legally with an unlicensed station (since these radios I am familiar with are designed for licensed business band - I worked in a shop repairing them). Yes, one could certainly go totally CB or FRS - however, the poster was requesting info on using ONE radio at his end to work both services. It may be possible, but I am unsure as to how to accomplish that. The best way is to get two radios for CB or FRS, obviously, but that wasn't the question. As far the the FM bands go, I am happy with it. I have consistant 40 to 50 mile coverage with my HT through the repeaters (24 hours a day, 7 days a week). I push a couple of buttons and I am connected to the local telephone lines. Oh yes, one of the linked repeaters has a 10 meter link and you CAN work Europe through that. Not bad on six double a alkaline batteries.

Heh ... well, what can I say? And that 1st screwball answer from an extry-class ticket holder, no less (not to mention the GROL)! I plead guilty to a brain-cramp! Oh well, just goes to prove what I've been saying all along, we're all human and as I've stated before, there are a lot more technically knowlegeable CBers out there than most of the hams are willing to admit (fear, maybe?). Thanks for the replies.

I had the rare opportunity to see a rhombic in use on amateur radio on 20 meters when I was stationed on Guam. The thing was 200 feet in the air and 600 feet on a leg. Band was near dead (US stations being received on a TH6-DX were running S2 to S3. Reports on our signal from San Francisco were 40 over 9. (of course, it was a military hf transmitter feeding the rhombic .. slightly over a gallon .. I remember the output being rated at 40 gallons ... heh heh heh)

T4A11 @T4D08 (B)
Would a 100 watt light bulb make a good dummy load for tuning a transceiver?
A. Yes; a light bulb behaves exactly like a dummy load
B. No; the impedance of the light bulb changes as the filament gets hot
C. No; the light bulb would act like an open circuit
D. No; the light bulb would act like a short circuit

TS-140S HF transceiver with general coverage receiver.
Compact, easy-to-use. Covers all HF bands with 100 W
output. General coverage receiver tunes from 50 kHz to 35 MHz.
All modes built-in. LSB, USB, CW, FM and AM. Includes
Instruction Manual, DC Power Cord, MC-43S UP/DOWN
microphone and original Kenwood Shipping carton.
Shipped for $450.00 lower 48 only.

Email me for more details.

B

Although light bulbs have been used for dummy loads they
are not optimum. They do not present a good SWR to the radio.

A light bulb dummy load does have a benefit. It unlike most
wattmeters will show an increase in brightness/power with
modulation. Most average reading wattmeters because of the
simplicity of the design can not show the 50% increase in
power with modulation.

Most Six Meter and Two meter SSB and CW people use horizontally polarized antennas.But on a
dx opening you can use a verticle but they are mostly used for fm.I would recomend a horizontally polarized beam for two stay away from the verticle as you will not good as good of a signal because 90% of 2 meter ssb is done flat side.Later Mike KC8FWD

Mark,
The decebel is a measure of comparisons. In this instance,
your comparing an antenna to a reference antenna, a 'standard'
antenna. "dbi" refers to a comparison with an isotropic
antenna, or an antenna in free space. An isotropic antenna is
an "ideal" antenna, nothing around it to affect it, etc.
"dbd" means your comparing an antenna to a half-wave dipole
antenna. When a manufacturer uses 'dbd' they mean that they
have made a comparison to an actual dipole antenna. Ideally,
this was done on an antenna testing range where all the stuff
like trees, houses, etc, are compensated for. In general, this
comparison is a 'real world' comparison. As long as you know
which one someone is refering to, you can 'convert' between the
two. A 'dbd' gain figure is usually slightly higher than an
isotropic 'dbi' gain figure, but both are refering to the same
antenna comparison.

Almost. The ideal or isotropic antenna is not derived from being in free space or from no objects being around it. The ideal isotropic antenna is one that does not exist. One that radiates a three dimensional symmetrical spherical radiation pattern. The ideal "real" antenna has a different pattern, not a spherical 3D pattern but a donut shaped one.

> 'Doc

Just referencing an antenna with the use of the term dbd still does not give you a solid basis for comparison. For example: If a manufacturer gives his antenna a 3dbd rating this can mean it has a 3db increase in power compared to a dipole in free space, or it has a 3db increase over a dipole on a perfect ground plane. It can also be anything in between the two.

This "open field" can account for as much as a 6db discrepancy in comparisons. One manufacturer might use marketing and state that his dipole has 6dbd gain. While another manufacturer will be very honest and state that his dipole has 0dbd gain.

Still other manufacturer in their quest for bigger numbers take another step. They'll use dbi instead. This will gain them an easy 2..1db It appears that this is most typical these days. This

means a manufacturer can sell you a dipole and without lying he can state that it has 8.1dbi of gain.

This is true only if you have a means to tune the output of the transmitter.
If you are dealing with a radio that has a 50 ohm output you could have some
problems.

==========
I disagree, a recieveing station will hear the station with the louder modulation clean or not, a station that keys up at 100 and swings to 200 will not produce any fuzzy distortion. It is not impressive to hear a station that keys up at 200 and swings back to 100, the more backswing the more compressed the audio sounds, the less effective range as well. want some proof at the cb keydowns the station that swings forward usually will beat a station that swings backwards ..Proof enough. It is called real world theory other than book theory.

One small correction Doc, dBd refers to a dipole in free space. That same dipole placed over real earth at a height of 1 wavelength would exhibit about 5.8 dBi rather than the almost 3 dB gain of a free space dipole. Naturally most antenna manufactures, particularly those that make CB antennas choose what ever reference shows there product in the best light and then proceed to add another 6 or 7 dB for grins. Some of the 5/8 wavelength verticals sold on the CB market make claims that you cannot arrive at short of using Chinese arithmetic and a set of dice.

An old man in his nineties, and an elderly lady, living in a nursing home finds each other and begin a relationship. Every day at the same time, they meet to watch television together. She brings a nice blanket, and as they watch TV she holds his dick in her hand. This goes on for quite sometime. One morning, the guy doesn't show up on time and the old lady is very worried. She begins to think the worst, and is so afraid of the possibility of his death, that she has trouble getting up and checking on him. As the other old people in the room start to look at her, she begins to get embarrassed and knows she has to go and check on him to see if he is sick, or even alive. She packs her blanket and slowly meanders down the hallway to his room. Tentatively, she knocks on the door and waits. Eventually, the door opens and the old man is just fine. She takes a sigh a relief and asks where he was for their usual meeting (to watch TV and hold his dick).
He tells her, "Well, to be honest, I have found another woman."
Shocked and hurt, she asks, "I she younger than I am?"
"No, she is also about 90."
"Well, is she prettier than I am?" she asks.
"No, you are prettier than she is." he responds.
Digging deeper, she asks, "Does she carry on better conversation than I do"?
"No, she doesn't talk much." he tells her.
Confused about it all and dumbfounded by his answers, she asks the age old question; "Then what does she have that I don't?"
His answer: "Parkinson's Disease"

582. Washington Clarifier

Currently the clarifier on my Uniden Washington is "open" to
approximately +/- 3 KC's (AM & SSB) and desperately need it opened to
+/- 5 KC's (minimum).

Please provide me with detailed documentation (article, web site
ect...) of how to accomplish this.

Thanks in advance :)

>One small correction Doc, dBd refers to a dipole in free space.

The term dbd does not necessarily mean in free space. The only
thing that the term dbd is held strictly to is this. Your comparison
is referenced to a dipole. The location of this dipole is not defined
with the term dbd.

As you know, a dipole can gain as much as 6db when combined
with a perfect ground reflection. Or a dipole can be is free space
and not gain anything.

Of coarse with all the variable fields left undefined we know how
some antenna manufacturers can use this to their advantage.

Example: One manufacturer may have a vertical dipole that
has a extra 1/4 wave sleeve to lower its radiation pattern.
This sleeve will give an apparent gain on the horizon. It will
be on the order of about 1.7db over the same antenna
without the sleeve. Seeing how the antenna without the
sleeve is just a standard dipole then it would make sense to
call our sleeved version a 1.7db gain antenna. NOT

Instead we let the marketing dept handle the db specs. They
see that the unsleeved antenna has 0dbd in free space.
They then change this to a dbi figure. We now have 2.1dbi
because the object is to increase the numerical value. Now it's
time to add the 1.7db of the sleeve. 2.1+1.7=3.8dbi. 3.8dbi is now
looking pretty good. Wait a minute. We can still use another fudge
factor. Let's put our 3.8dbi antenna over a perfect ground plane.
3.8+6 = Walla.........9.8dbi

Sounds like an Antron to me

.

To site one of many references "the ARRL handbook" 1999 edition page 20.3

"When the standard is the isotropic
radiator in free space, gain is expressed
in dBi, when the standard is a dipole,
also located in free space, the gain is
expressed in dBd"

a dipole over normal ground is always referenced to dBi or dBd.

There is a program called EZNEC available on the net. The trial version is free. The trial version is somewhat limited, but will allow you to out in the dimensions of an antenna and get the real information rather than some outrageous claim. If you have any particular antenna you are concerned with, I would be pleased to help you with an unbiased electrical analysis.

Um... Big dummy....

DOS is an OS DoS is a "Denial of Service", i.e. a nuke, smurf,
flare, spam, packetflood, etc....

Get your terms traight..

UNIX was 64 bit back in '94.... and was first used at Bell Labs in the
late 1960's... It's been around the longest. UNIX was not created ina
basement, nor did IBM have anything to do with it until the Mid 70's.

In fact, UNIX was first, CP/M was next, then Gates ripped off CP/M and
MS-DOS was born.

Have you managed to work your foot free of your mouth yet? Well, keep
chewing... it might come out soon..

Don't get me wrong, though.... The G3 and G4 Mac's are great
machines...once you pull that Linux-derivative OS called MacX off
their, repartition the drives, and install NetBSD.

Just my two cents

-SSB

On or about Sun, 03 Dec 2000 12:48:52 -0600, brass <cc@knology.net>,

The thread was about a 100 watt light bulb. I'm not sure what a # 47
bulb is. Certainly not 100 watts.

A 250 watt light bulb is 55 ohms at 117vac. At this voltage the
filament is hot and its resistance goes up. The filament in this bulb
when used with a 4 watt CB is considerably less than 55 ohms.
Although I don't have a 250 watter available I would guess it would
be closer to 10 ohms than 55 when used as a dummy load on a
4 watt radio.

Referenced to dbi is a no brainer. Referenced to dbd is not as
straight forward.

Antennas measured on antenna test ranges can have and are
often referenced to another antenna on a test range by the use of
the term dbd. In other words an antenna can be measured near the
ground and still use the term dbd correctly.

Follow this link http://www.cebik.com/dbi.html to get a full
explanation. I will quote a section. Begin quote:
****
dBd: a warm but fuzzy concept

The concept of dBd was formed to capture the gain of an antenna
relative to a dipole. A dipole is considered the standard basic
horizontal antenna, and comparisons to it seemed to some folks to
be more meaningful than comparisons to the isotropic
radiator.

Unfortunately, the concept of dBd has become a cluster of
concepts. Here are some of them. The notation is my own, since
few folks are anxious to distinguish the individuals in the cluster.

1. dBd-I: dBd ideal compares the gain of an antenna to an ideal
dipole in free space. An ideal dipole uses infinitely thin lossless
wire and is resonant at the frequency of interest. In this
application, the ideal dipole has a gain of about 2.15 dBi, that is,
2.15 dB over an isotropic radiator. All measurements are thus
arithmetically transportable between dBi and dBd-I by adding or
subtracting 2.15, as appropriate.

dBd-I is of limited utility, since my backyard dipole may have a
gain of 7.15 dBi and 5 dBd. Some folks become confused by
the idea that a dipole has gain over a dipole. We then have to

explain that the real wire dipole has gain over the perfect dipole in free space. That rarely helps a lot. And it does not tell us until we do some arithmetic how much gain some other antenna has over a real dipole.

2. dBd-RM: dBd can be expressed as the gain over a real dipole modeled at the same height as the test antenna. For studies that are strictly modeling investigations, this measure is sometimes useful. However, it requires that we further specify the construction of the dipole in terms of element diameter and element material. Using the same material, dipole gain will vary with element diameter. It will also vary inversely with the loss of the material used for the dipole.

Both these constraints apply within the further rule of keeping the dipole resonant. If we make measurements across a ham band, we shall find that the dipole gain varies with frequency unless we reresonate it for each readout frequency. Actually, we are usually more careless than this and take one resonant reading and apply it across the band without checking. And we tend to use fairly loose standards of resonance rather than converging the results. We may more precisely say that an antenna is resonant when the reduction of feedpoint reactance results in no further changes in gain to the number of significant digits that apply to the test.

As one more qualification, we should note that dipoles and other antrennas may have different elevation angles of maximum radiation over the same type of ground. When we cite dBd-RM, we must also say whether we are giving the figure for the dipole at its angle of maximum radiation or at the angle chosen for the test antenna. To avoid confusion, it is usually better to give details about the differing elevation patterns.

3. dBd-RR: dBd can be expressed as the gain over a real dipole set in the same position as the test antenna, where both antennas are oriented for maximum gain relative to the far field receiving site of the test range. For fairness, one should specify the construction of the dipole to ensure that the materials are comparable to those of the test antenna.

However, there are a number of variables that occur within this way of handling dBd. First, range conditions vary considerably from one site to another. Second, some testers take the average of a number of readings in various directions, while others take readings along a single line defined as the best test line. Third, different ranges may use different test heights. The importance of this factor stems from the fact that many antennas that might be tested have different elevation angles of maximum radiation than a dipole, and this variance may introduce differences in readings as we change test antennas and as we move from range to range with different test antenna heights.

Good testing and modeling protocols would specify all of the relevant factors applying to the comparisons involved. We sometimes do find these specifications. Unfortunately, we often don't. Without the specifications, comparisons in dBd-R (either M or R) are quite difficult to make. If we could only bring all antennas to a single test range with a single (large) set of dipoles and standardized conditions, we could likely establish the gain of each antenna over its standard dipole and then have truly precise comparisons among antennas. Someone has noted to me that the odds of the earth being struck by a meteor like the one which ended the reign of the dinosours are higher than the odds of the emergence of a universal test range. I really wish I could have disagreed with this individual.

Not to mention that if a #47 was 50 ohms that 4 connected together would be 12.5 ohms unless you series wired two bulbs and put it in parallel with a second set of series wired bulbs.

No it isn't. dbd means referenced to a dipole. Many times the dipole
is assumed to be in free space, but the simple term dbd does not call
out that the dipole MUST be in free space. The reference dipole
could be on an antenna range and your test antenna can still use
the term dbd for the comparison to this reference antenna.

If you have a engineering definition that states dbd must be in free
space I would like to see it.

Mike Yetsko <joe@user.com> wrote:
: Then you didn't read the actual law.

I certainly did. I just do not remember all the particulars, which is why I qualified my statement.

: The law STILL reserves for the fed all rights of enforcement.
: It only grants to the states or local governments the ability
: to write ADDITIONAL laws that ALSO enforce the same
: thing. If a state law is at variance with the fed, then the state
: law is not valid. EXCEPT that a state law that is LESS
: stringent than the fed is valid. Anything the states do that is
: IN EXCESS of the fed would be found to be invalid as the
: fed did NOT grant the rights to enact any new laws.

Maybe. The Supreme Court has often held that states may enact laws that are more stict than the federal version.

For example, the states could provide larger penalties for breaking the federal regulations, when they write the regulations/statutes that they must to be able to make use of this law.

: The federal law does NOTHING to change existing law as
: far as enforcement goes at the federal level. All it does is
: allow lower jurisdictions to pass EQUIVALENT or less
: stringent laws that are SUBSETS of the federal law.

I agree with the first sentence. Nor have I ever implied otherwise. I would hae to read the law again, before I can agree with the second sentence.

: And the new law is VERY explicit that it does NOT pass
: any rights to the states with regard of giving up federal
: regulation.

Not giving up federal enforcement rights and allowing states to pass laws of their own to enforce state/local law in relationship to CB radio are two different things.

From my reading, the law states that the FCC is giving state and local government the right to create laws in regards to violation of the FCC statutes - in any manner they choose. There is nothing in the law that limits penalties - so the state/local government could allow life in prison for even a minor infraction (which would not stand up on appeal, but that is beside the point).

: regularly and lets start taking our discussions to the ham boards. Time to
: let the Ham world know that there are ways for the misrepresented to fight
: back.

I am not a Ham, but I suggest that all CBers DO NOT start using the
10 meter band. Leave it for the Hams. The same with their newsgroups.
Why should a bunch of us act in the way a very few Hams act on the CB
newsgroups? Do you want to convince ALL Hams that we are just a bunch
of "Chicken Banders"? I don't. And you shouldn't either.

Most Hams do not care what we do, as long as we stay out of their frequencies.
The same applies, to a slightly lesser extent, to their newsgroups.

The Hams perform a vital service through their emergency communications during
emergencies. If it came to an "us or them" face off, the Hams would easily
win.

It WOULD be possible to eliminate 11 meter CB. Not easy, but possible. It is
impossible to hide a radio signal - it can always be located, if being sent
long enough for meaningful communications.

Whether we like it or not, those are the facts. So let's just stick to the
CB band and newsgroups. Abuse them, if you must, but I would recommend that
everyone stay out of the Amateur frequencies and newsgroups.

: talk to a bunch of self centered idiots like him. I would like to thankyou. I
: think I will stick to my good old CB. Where everyone seem to get along just
: fine.

Don't let the assholes get you down. There are some in the Ham groups, just
as there are some that are CBers. It is not due to the radios they use, it
is their personalities. Burying your head in the sand will not make them go
away. Nor will fighting them - they love discontent, hate and strife.

Most people I have encountered, of both groups, are decent people.

If you want to help change the minds of some of the Ham members, become a
Ham. Be a regulation obeying Ham, and operate legally on the CB bands as
well. Promote the CB band as an alternative convenient means of communication
to the Hams - and use CB when possible.

It's funny how the two words sound the same, isn't it? I wouldn't be a bit surprised if they both came from the same Latin or Germanic roots. In which case, there'd be no difference between the two, would there?

I've been silently reading until now.

Please don't judge all amateur radio operators using this twit as a
standard. He's a disgrace. Amateur radio is an endless technical
adventure as well as a place to meet some very interesting folks.

I'm a recent licensee, not one of the "old fart" brigade. The hassle
of learning Morse is a small price to pay to access SO many
frequencies legally, as well as DX without a big amplifier.

BTW, I was a CBer back in the early 70's when you still needed a
license. (KCN2592) I bailed out when the last 11 year skip peak
plugged my ears to the point of unusability.

Just consider the source when dealing with this guy and his type. On
the air or the web, ignore him. In the parking lot, punch his teeth
down his throat. He's a beggin' ya with all that H&D.

> in Finland - it shouldn't be too hard for you, eh?)

That 'eh' on the end is the Canadian (or at least Great Lakes Canadian) trademark. Have you been hanging with the VEs again :-)? Used to curl against a team out of Thunder Bay Ontario that called itself the 'eh' team; a play on words: the A-team was a popular TV show some years ago.

Show some charity, Gary. We don't have a pressing need to know and no real opportunity to practice whatever language skills we may have picked up in the educational system. At least according to the Economist last week, the Swiss are not in a lot better shape. There is, however, nothing better to teach geography than amateur radio.

About ten years ago I was staying at a bed & breakfast about 60 km west of London. Among the guests was a German so stereotyped in his views of Americans that he was literally amazed that we walked into town and in fact spent a morning walking thru the local boondocks. At breakfast, his wife and seven year-old son conversed in German. As we were leaving, and I was contemplating the justice of his going to Wales in a big Audi with the steering on the wrong side, his son came down to play with the B&B owner's very ancient dog. Marshaling my tremendous abilities in German I figured I about had enough to converse with the boy so I gave it a go. The look on Herman the German's face -- apparently believing I understood the breakfast table conversation -- was absolutely priceless. You bet and you bet correctly in most cases but do not risk your life savings on it. Someday you might encounter a W8 from the Upper Peninsula of Michigan (da Yoo Pee, hey) who may well be of Finnish ancestry.

Draw yourself a 750 km radius from your home on a map and you are in a lot of different and non-Finnish territory. The same distance West would not get me out of Nebraska. As a British friend puts it, the most notable feature of the US is that there is so blessed much of it.

Who knows, perhaps someday we can share some sahti although juniper makes me sneeze.

No I didn't miss it. It says a dipole in free space is
expressed in dbd.. This is correct. What it doesn't say
is how to express a dipole on earth. This can also be
expressed by the term dbd.

"When the standard is the isotropic
radiator in free space, gain is expressed
in dBi, when the standard is a dipole,
also located in free space, the gain is
expressed in dBd"

Improved explanation from earlier post:

No I didn't miss it. It says a dipole in free space is
expressed in dbd.. This is correct. What it doesn't say
is how to express the gain over a reference dipole on
earth. This can also be expressed by the term dbd.

Seen it happen the other way. A good friend was in a pub in Wales where the English are not exactly welcome. He looked the Oxford don so took up doing a 'Texas' accent and broke the ice immediately.

Could have come from Pygmalion. As he is from Muskegon Michigan, the Texas must have been really bad.

On the trip I mentioned, a friend out of the Missouri hills was along and had a terrible time being understood. The 'copying behind' one learns from cw is of great benefit in Lancashire and Yorkshire.

What in hell is an American accent anyway?

Dick

We did the same up here once on field day: we built a Rhombic, approx. 400 meters each side and put one kW into it. After working Japs on forty, eighty etc. we went out to check the antenna. We discovered the antenna wire had touched some birch branches and the RF had caused severe burns to the poor tree. Sob. Gary

Ya' know, professor, you and I may have different views, and I always don't agree with what you have to say, but it is your right. Even when everyone on here was slamming you to put up or shut up concerning your so-called designs, patents, inventions, etc..., in my mind I aways gave you the benefit of the doubt, since there are many reasons one may have to not "prove" themselves that exist. But as of late, I am more inclined to believe what most of the others on here say about you. It takes respect to get respect, and I give everyone the benefit of the doubt AT FIRST, but by you aligning yourself with this subterranean dweller and attacking those who in no way provoked you, well, lets just say you have successfully managed to retain the position so many here have accused you of. When ARE we going to see these hallucinated inventions?

I don't disagree with any thing you said, however, if you used a
dipole for your reference antenna, and this reference was not in a
anechoic chamber, but instead close enough to the ground as to
cause ground effects, then how do you reference your simple test?

If your test antenna showed a gain of 1.3db over your ground effect
reference dipole then how do we describe this? One thing we do
know is it would NOT be proper to give your test antenna a gain of
1.3db. The term 1.3db does not give you a reference. A antenna db
figure without a reference is not proper. Is it proper to give your
test antenna gain of 1.3dbd?????? 1.3dbd does reference a dipole.
Furthermore we can not use 1.3dbi .You only have ONE proper choice,
1.3dbd.

That is why using dbd instead of dbi can skew the numbers. A
isotropic antenna by definition is a mathematical model that does
not change. A dipole can either be in free space, or it can also be in
close proximity to the ground. The simple term dbd does not
distinguish between the two of them.

No one said dBi was anything other than isotropic the discussion was centered on the location of dBd and as you so aptly pointed out the chamber equates to free space.

One need only see that in the literature there is always a fixed 2.14 dB gain in favor of the dipole. A dipole over real earth can vary from 5 to 8+ dBi depending on height and ground conductivity.

Hello MC: Let me disagree with you here on the second paragraph.

Not all antennas are measured in a anechoic chamber or range. At HF frequencies the anechoic range will have reflections causing the antenna gain or comparison measurements to be wrong. With the reflection energy adding or subtracting to the measured signal in a unpredicted way. This is why HF antennas ranges are outside, and the engineers half to make a calculated call or acceptable risk, measuring procedure call when measuring HF antennas. There are way more things that can go wrong to make the measured antenna data very inaccurate.

The antennas I have advertisement brochures on, give a calcuated or analytical antenna gain figure. Not a measured antenna gain off a HF Antenna Range. To my knowledge, anyone have another information on this?

The ground reflections from a ground plane antenna can significantly change the elevation patterns, from a height of 10 feet to 40 feet. Making the measurement of the HF antenna a can of worms to measure, with a good chance of doing it wrong.

The cost of the engineering staff, range technicians, and range time can cost several thousands of dollars in just the set up time. And the measured antenna gain, as compared to a dipole antenna may not be what the boys are looking for, to print in a antenna advertisement. Also the knowledge that the antenna manufactures know, how really difficult it is to measure antenna on a HF Antenna Range, may not want to spend the money if the can not easily be proven wrong. And having the correct antenna gain figures, may not prove anything. Because the installation of the antenna will make it or break it, in performance.

652. Signal Engineering - !!WARNING!!

Newsgroup: rec.radio.cb
Date: 2000-12-05 00:00:00 UTC
From: Oh Yeah! <maps75@pvtnetworks.net>
Message-ID: <t2rm20kgga5cdc@corp.supernews.com>
Source record: 62062

To Whom it May Concern:

I (American Eagle 360) recently purchased a Signal Engineering
White Lightning 6, from a fellow CBer & Amateur that is out of
work and needed to liquidate some of his unused equipment. The
reason he wasn't using it, he had built a flat side yagi because of
his location is VERY windy. He had several of the #13 solid
copper elements vibrate until they broke and one occasion his
2" boom literally bent around the rotor mast. When he had taken
the antenna down, he simply took the fiberglass elements out of
the boom support tubes and zip tied the elements and wire to the
boom sections.
Upon buying the beam I called and requested the wire lengths of
the elements as I had planned to replace them with a product called
Flex Weave. A #14 168 strand jacketed wire so after building the
beam and getting it into place I wouldn't have to take it down for
some time. HERE comes the kick in the ass about Signal Engineering;
they have a answering machine that answers there business phone.
They will return the call as soon as they find the message, BUT they
will not under any circumstances give out the measurements of the
wire elements even to owners of their product. I even went as far
as to tell them I had the assembly instructions in front of me and would
quote to them from the manual to prove that I owned their product.
I am having to separately straighten each element

and measure it to
find the lengths. I called today (12-5-'00) the
firm of Cubex the manu-
facturers of the most famous amateur quad antenna.
Their tech support
representative was most helpful in furnishing the
K factor multiplier to
facilitate the conversion to jacketed material and
told me that the difference
between #13 solid and #14 multi-stranded wire
wasn't even worth the
effort to figure out.
To summarize the long of the story, Cubex one of
the worlds best known
quad builders is producing a 4 element quad for
about $20 dollars higher
than what Signal Engineering is offer theirs for.
And Cubex is working on
a 6 element now. It should come in at slightly
higher than what Signal
Engineering is currently asking for the White
Lightning 6 for. Cubex uses
#10 wire and tailors their beam for the area that
is going to be put up in.
They will even substitute Flex Weave at an
additional charge upon request.
And they use a standard 3" boom for their
antennas. And they are built
like a tank. SO IF YOU ARE LOOKING FOR A HEADACHE,
BUY
SIGNAL ENGINEERING!! IF YOU ARE GOING TO BUY A
QUAD
TO ENHANCE YOUR SIGNAL, BUY CUBEX, BUILD IT, PUT
IT
UP AND FORGET IT!!

BC245XLT 5sec delay version. Comes with 3 batteries and a charging craddle. You can have one battery charged in the craddle at all times and one extra charged with you for emergencies. Comes with leather carry case. Data cable also.

Price: $130 shipped PrePay or COD in the U.S. only. Cashiers Check or Money Order only.

Thanks, Juan

..and vice versa, the same CAN be said for illegal ops in the UK splattering the US. Don't tell me there aren't many, either. I'm at well over two hundred to the UK this year alone, (and those are just the ones I counted) almost as many as last year..and it certainly ain't on the UK allocated frequencies!

> Any CB radio/2 way radio would work I guess...
> so, what is recommended?

Get the Midland 75-822.

Small, lightweight, handheld 40 channel CB radio and comes with an
adaptor for mobile use.

As a "handheld" with the battery pack (6 AA batteries) and the rubber
duckie expect a range of about a mile, converted (15 seconds) to a
'mobile' for use in a vehicle it has a range of about 5 miles (depending
on terrain and antenna).

With a good mag-mount antenna you can easily tranfer entire package to
any vehicle you are driving by dropping the antenna on roof and plugging
adaptor into cigarette lighter.

The Midland 75-822 has quite a few bells and whistles, including the
weather channels, something you might appreciate if you plan to spend
much time on foot. The built in mic is excellent but the speaker is not
very good, probably because it's so small.

I recently bought a Midland 75-822 for my son's car so we could talk
while running in convoys (I have a Uniden 68XL in my mobile) and the
only problem we had was because the boy kept licking the lollipop. Had
to keep telling him to hold the mic further away from his face so we
could understand him.

Best thing about this radio is the way I plan to use it while Christmas
shopping. I'm going to drive my wife to the mall, hand her the Midland
when I drop her at the door and tell her to call me on channel X when
she's finished, because I'll be sitting in the car half a mile away in
the back half of the parking lot reading a book and smoking a cigarette!
<GRIN>

Don

THIS IS N8WWM HEADLINE NEWS!
After an exciting 2 day honeymoon in the back room of a CB shop, Scottiekins, twistie and tnom are enjoying married life at home now. The honeymoon would have been longer, but the CB shop owner threw them out after he saw certain body fluid stains on his stash of leenyers. Another problem ensued from the racket caused by the tripped out trio as they raved over the roger beepers and power mikes.
"You aint sposedta use 6LQ6 tubes as sex toys, and them boys know that!", said Joe Pumpemup, the CB shop owner. As Pumpemup looked over the litter of broken export rigs and burned out modjee boxes he exclaimed "Them boys wuz worse than a durned FCC raid!"
The freaksome threesome were not available for comment, as tnom and twistie had hurriedly rushed Scottiekins to a nearby hospital to be treated for foriegn object insertion strains to his lower bowel.
Their landlord, the same one who rented the trailer next door to Paula Jones, told this reporter "Them boys aint runnin' no base station there, I done told 'em I monitor channel 19 and I aint puttin up with splash in my trailer park."
Reportedly, Scottiekins and crew are gonna be looking for a house with a TV tower already there so they don't have to buy one for the Antron 99. They are rumored to have instructed a real estate agent that the new house also had to have a flush toilet, as they want to move up in the world. They also had a requirement for 220 volt wiring, as tnom has rewired the primary side of the power supply in the old gray 12 tube Phantom so the lights wont go dim.

Brought to you by the N8WWM news service. More bulletins soon.

Series-parallel is the way you have to do it, but the impedance is not likely to be anywhere near 50 ohms at 27 MHz.

He know all about dummy loads. Don't ya Scottiekins?

Scottiekins drools out his open mouth, splattering his keyboard with a mixture of squirrel turds, Red Man, and saliva.

Hows the marriage going Scottiekins...are tnom and twistie being faithful?

N8WWM Sparklingly replies:
Twistie, twistie, twistie....

Lame lame lame

Thanx for playin though...
You get the consolation prize: A big modjee box that uses tubes you can't buy anymore. Use it in good health while your other 2 wives watch and stroke their erogenous zones. Play nice and take turns now, children. Enjoy the fumes from tnom and Scottiekins' intimate areas.

I have not chuckled as many times since I watched an all night "Bowling for Dollars" marathon.Geez, that musta been 1965 or so.

Twistie, while manipulating a length of garden hose in his lower bowel and slobbering in pleasure, spewed forth this silly and intellectually inferior piece of evidence of his mental decay:
>Not exactly, Professor. I've met some cool folks because of this ng and
>learned a few things along the way, some of it even derived from your
>blathering nonsensical inspired arguments. The chiding and calling of

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have, with adult supervision, drooled into a dictaphone the following masterpiece of authorship and it is now available at your local book store...Don't miss "Muskrat Love", the heartwarming story of 3 illegal CB'ers who find love and marriage through uniting in hatred for N8WWM, the mean 'ole hammie they wish they were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and into 10 meters, listen to the 3 sweet little CB'ers plot, plan and generally scheme to out flame the greatest flamer of all time. Read about their use of electronic components as aids to their sagging libido's. Learn why no female relatives ever come to visit. Look at the special 13 page photo insert that shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife", by Bill Clinton, and will become recognized as a major literary accomplishment. The trippin' trio have outdone themselves this time, and you have just gotta read it to believe it. Only 29.95 now at your local bookseller or order online at
www.N8WWMisGreat.com

Hi Bill - remember that whole scam problem I had with a Duane Drayton down in Louisiana? I was supposed to be paying $400 for a galaxy 99 + a davemade 5 pill. Sounds suspiciously familiar doesn't it?

I think I saw his ad originally on Bigradios.com. I see their marketplace/amps section has been shut down since then. He had a webtv email address. I've got more info on him if that's the guy you've had the misfortune to run into. Luckily I got my money back from a good hearted tech who got stuck in the middle of the deal. A long and very ugly story.

Sorry to hear about that!

The ARRL, America's Rotten Radio League, screwed us over a year ago. Cancel your membership before they screw you again. The ARRL board of directors wants to turn amateur radio into CB! If you cancel your membership the only people the ARRL board of directors will be able to screw is each other. Just wait, 13 months from now the CW bands will shrink, and CW testing will be ended. Thank you ARRL for turning our ham bands into SHIT!

Hi Bill. I read your post and just had to throw my comments in. I sent a guy in Hawaii $750.00 for a 16 pill box and after all the bullshit, and lies , you guessed it , I got screwed. Then on top of all that some of the cber's over there said they would help me. Nothing ever happened. So my ass still hurts from that one. Needless to say I will not ever send anyone money over the internet unless I cma first. Anyways, no offense but I definitely feel your pain.

Looks like the boys in Phoenix have won the battle and the war. 27.555 is no longer the international call freq and has turned in to the official JAMMING freq. We as responcible alfa tango members must realize defeat and try to come to some type of settlement with those big Phoenix stations or risk loosing our DX club all together. We must be men enough to realize that the group of 10 or so idividuals in Phoenix that are Jamming the international call freq are both organized and financed beyond our capabilities. We must negotiate some type of settlemen or move to a different freq. It has been 5 months now and they only grow stronger in both signal strength, and number of stations...as we alfa tangos grow weaker and less in stations.

The only thing I will add is that when talking about -hobbyist- grade antennas, the gain claims are often falsified. This is especially true if the gain is quoted as dB, as opposed to dBi or dBd. It was because of these gain shenanigans that QST magazine created a policy that antenna manufacturers could not cite gain claims in their advertising. One last thing to remember is that higher gain does not always equate to higher performance. This is especially true when you get up to UHF frequencies, but I don't think that is an issue on CB radio.

707. Re: UPDATE - BAD GUY Alert Jerry Pippins

Newsgroup: rec.radio.cb
Date: 2000-12-05 02:25:40 UTC
From: The Packrat <spam@n7uic.net>
Message-ID: <EmYW5.114587$U46.3692659@news1.sttls1.wa.home.com>
Source record: 62010
Cross-posted to: rec.radio.cb,rec.radio.amateur.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment

That board is supposed to be there and these radios really don't hold up very well to any kind of abuse. Always check to see if a person sells a lot of items and check to see if they exist on ebay for references and positive feedback. Do a search on dejanews to see if the person had good or bad dealings in the past.

"N6TGK" <n6tgk@home.com> wrote in message news:axwW5.33341$I5.557571@news1.rdc1.sdca.home.com...
I posted a "Bad Guy Alert" here about a week ago concerning Jerry Pippins (aka cbnut24 or cbfixxer). I stated that he was supposed to ship me a Uniden HR-2510 in exchange for my BC895 Trunk Tracker.

Jerry claimed to have shipped the radio on November 13th, I shipped the 895 on the 14th. He got the 895 on the 21st of November. On Thanksgiving day I started asking him where the 2510 was and he came up with a bunch of excuses as to
why it wasn't here. He eventually responded, "Don't be a whine ass, you'll get it." After that, his e-mail address was no longer valid.

On December 2nd I FINALLY received the 2510...postmarked Nov 30!!! But that didn't bother me. At least I had finally gotten the "excellent condition... you'll love
this radio" 2510 that Jerry promised me. Upon opening the box and digging through the packing I found a PATHETIC looking 2510. The case and face plate
was scuffed up like you wouldn't believe. The power plug on the back is broken and
pushes back into the radio whenever you try to connect the power cord, the accessory
plug has epoxy all over it and someone added a speaker jack and did a very poor job
of it. Upon removing the covers I found that the back part of the display was melted
because some MORON removed the original lamp (probably burned out) and replaced
it with a HIGHER wattage lamp. This lamp melted the display to the point that the
lamp will no longer stay in place. Wires have been snipped and slodered to other
locations, obviously an attempt at doing some kind of modifications. There are cold
solder joints, large globs of solder and someone added a small PCB board to the underside
of the RF board and is being held in place by pieces of solder. I have no

idea
what this board does. The radio smells like smoke and has the hint of burned components.

I obviously didn't get a fair trade since my 895 was in NEW condition and this 2510 is probably only good for parts.

Avoid this person if you can. I was able to find some feedback about this guy on Yahoo! Auctions and his feedback was very poor. He's still holding to the pattern from those posts: ships late, has several excuses and doesn't send what is promised.

Jerry... if you read these news groups... thanks a lot liar.

I think you'd be surprised. A #47 light bulb is precisely 50 Ohms and works great for a 4W radio. You can also solder four of them together to up that to about 16W, which should cover off a stock CB 12W SSB rig. For higher powers, I think you'll find that a 250W Sylvania light bulb is deadly close to 52 Ohms. Think about it, the formulae is V2/R. (115x115)/50 = 250W. Just keep the lead lengths as short as possible and you should be fine on 27MHz and below. This is actually a good test of power as there is no arguing that a 250W light bulb that is glowing dim does not have 250W going into it.

2 cell phones - $.02 - service per month for 2 cell phones $60.00 for about 1500 minutes shared. This should do the trick

"JAMES HAMPTON" <j.r.hampton@worldnet.att.net> wrote in message news:g7SW5.18394$0r2.484176@bgtnsc07-news.ops.worldnet.att.net...
Ah, you took my post as a flame. It wasn't meant as that. The question was could one individual with a license talk to a non-licensed user, perhaps using a modified radio. I should have been more explicit in my reply. Generally, the answer is no. There are type accepted UHF business band radios that can be programmed for a number of channels - and they CAN be reprogrammed to the 400 - 450 MHz ham band. This might be a possibility as long as you had the license for the business band - but it is stretching reality to find a good way to do it legally with an unlicensed station (since these radios I am familiar with are designed for licensed business band - I worked in a shop repairing them). Yes, one could certainly go totally CB or FRS - however, the poster was requesting info on using ONE radio at his end to work both services. It may be possible, but I am unsure as to how to accomplish that. The best way is to get two radios for CB or FRS, obviously, but that wasn't the question. As far the the FM bands go, I am happy with it. I have consistant 40 to 50 mile coverage with my HT through the repeaters (24 hours a day, 7 days a week). I push a couple of buttons and I am connected to the local telephone lines. Oh yes, one of the linked repeaters has a 10 meter link and you CAN work Europe through that. Not bad on six double a alkaline batteries.

Hi,
I have been listening for a bit now and notice that there seems to be alot
of packet radio on 26.84,26.78,26.74,26.72 mhz all l.s.b.
Most of the calls seem to be European ,but here in 43 division the signals
are real weak and hard to decode .
Does anyone know what these packet networks are ,pirate or not..
Also are there any other freqs used for packet in the 11m band?
Thanks
James 43ST194

Maybe 52 ohms at 60 Hz, but who knows what it is at 27 MHz...a lot of difference.

Make two pairs. Put two 50 ohm resistors in series. Makes 100 ohms. Then
put the two 100 ohm pairs in parallel. Makes 50 ohms again.

For a cheap dummy load, you can put twenty 1000 ohms CARBON resistors
in parallel. Or forty 2000 ohm resistors in parallel.
Simple average for several same value resistors.

For two resistors in parallel, the formula is:
R1+R2/R1*R2. This formula also works for capacitors in series.
Just make sure the values are in the same format (uF or pF).

Resistors in series just add up. Capacitors in parallel just add up.
(more below)

Remember, a tungsten filament is coiled. This creates inductance that is added
in series to the bulb's DC resistance. That changes everything.

You may have missed the message where I quoted the 1999 version of the ARRL handbook chapter 20 page 3 where the words "also located in free space", in reference to a dipole appear in italics for emphasis.

The same definition appears in the fourth edition of "Reference Data for Radio Engineers" Chapter 23

See David Little's reply - it's a good one. To be able to know what the heck antenna salespeople mean with the phenomenon "gain" you'll have to be very careful indeed. Mostly they talk about theoretical gain in free space, dBi etc. Don't believe them: the longer the boom, the better the gain. Then, on the other hand they don't talk about sidelobes or front-to-back ratio.
Wow... 73 Gary

Yeah on Don. Too bad he passed away. He was a big advocate of getting new blood into ham, and into serious 11 meter SSB operation. In addition to being the Stoner in the Stoner Pro 11m SSB gear, he was also the S in SGC commercial and ham HF gear. . I think he held a position in No Code International when he passed away. He was never too busy to respond to an email message with a question from a new or prospective ham.

Pirate actvity in the states is mostly on 6.955... some AM, most LSB. Not much on during the week, but holidays and weekends bring 'em out of the woodwork.

Friend, the only reason I didn't get that silly box is because the guy didn't send it. Now what part of that do you not understand. Son I am 50 years old and have been doing radio for about twenty some odd years and I really don't have time for games. So if anyone deserves someone it is you who deserve your homeboy. Like I told you amigo, if I lived over there, we would not be having this conversation. So I believe like you fine island folks say. Oloha and have a real nice day.

One more time Sir! I have provided you with a number of references that state contrary to your opinion. You have yourself quoted the 2.14 dB difference between the Isotropic (dBi) and the Dipole (dBd). This is ONLY true for a dipole in space. Last night for grins I modeled a dipole at two lambda above perfect ground on 14 MHz and achieved an 8.3 dBi or 6.16 dBd. Rather than me continue to repeat myself and adding additional references, may I ask Sir that you post any reference that supports your position. I do not wish to be contentious, but simply have many references supporting my statement.

Oh really? The last thing emergency officials want is a bunch of untrained idiots running around getting in the way trying to be radio heroes, and that applies to hams or cbers. It may not take a license, but it does take training. An there are programs in ham radio to train for emergencies.

745. Re: FA: VERY RARE CPI-2000&BC-2000 console

Newsgroup: rec.radio.cb
Date: 2000-12-06 00:00:00 UTC
From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <90lqeo$6bf$2@mark.ucdavis.edu>
Source record: 62161

I've serviced many a CPI 300, 400 and 2000. Plus I have a rare trunk
mount version (or two). They are solid radios, well built and work great
when not hacked up by mods. Parts aren't that big a deal as they were
used conventional designs and common chips (for the era).

The only hens teeth are the pll divider chips and the output transistors.
I've had to go about crossing out all the above or finding used/nos
parts. CPI like my siltronix are a usable collectors rig, very solid in
design and construction. Maybe I should do a CPI page to go along side
the siltronix page at http://sonic.ucdavis.edu
cheers
skipp

: They are head and shoulders above any other rig of that vintage. The were
: all American made. They used discrete boards for RX and TX, with
: interconnects carrying RF and control using construction techniques like
: used in commercial 2 way manufacture.

: The VCO was a little touchy, but when working properly they were a force to
: reckon with on SSB and offered quite good AM operation. The sets offered
: expanded frequency range capabilities, and even provided a front panel
: opening between the dual channel selector knobs for the switch to activate
: extended coverage. They also provided for a 5 KHz shift modification. The
: accessory components sold to match the setup offered a real signal preamp,
: console with counter. and I think even a speech processor.

: CPI is today more a collectors rig than one you would buy and use daily. As
: with all collectible pieces of that era, actual use has to be balanced with
: repair parts availability. One thing you can count on is they are not
: making any more, it was rare even when new, and somewhere out there is
: someone that collects them. That is a formula for appreciation of price.
: Having said that, any collectible only has a set price on 2 occasions;
: buying and selling. All points between these 2 transactions fall into the
: category of speculation.

: Hope this sheds some light,

: David

He has a point, Kari. It does seem to be those who can't or won't pass a
5wpm code test that seem to be the most vocal on this (amateur-provided BTW)
newsgripe.

Part of the problem is that W&#65533;DEF may be an Extra licensed more years than I
am old or the newest codeless Tech on the block. While my 1x2 certainly
indicates an Extra, there is no seniority system in place so he may have
been licensed last week as well.

Can anyone confirm these "coilsticks" have more range than a standard base or center loaded trunk mount cheap "O" properly grounded and tuned to near zero SWR.
Or is all the hype "marketing Voodoo"
I am doing a installation for a buddy who just wants a setup for channel 19 with 4 -5 watts.

I'm not saying anything contrary to your definition. All I am saying
is a dipole can ALSO be close to the ground and at the SAME time
be your reference. If it IS your reference then you can use the term
dbd in your comparison.

While some of the db claims may be inflated a bit, I have been using the KW-7 for over 15 years. I have never had to tune one on my vehicles. The thing to remember is that the coil is on the top, were the voltage is the greatest. Current flow through an antenna is impeded by a coil. By coiling the antenna with the tightest coils on the top, it seems to have an autotransformer effect like an ignition coil. I can talk farther on one of these with 2 watts then my buddies using 6 watts on a Wilson 1000.

I have clobbered 2 pills and 4 pills with a 2 pill. This may be due to proper mounting. I put a ground strap from the mount to other points on the body and frame. I have a max SWR of 1.3:1. Again, never tuned. The factory claims resonance at 27.43Mhz. I want to test it on a 259B.

You need a good solid ground with one of these antennas. Magnets, even three or four magnet mounts just won't do it. You must drill a hole. One vehicle is mounted on the trunk (drilled), the other on the back bumper (drilled). I use RS 21-961 mounts with large fender washers. The use of GOOD coax cannot be stressed enough. Use RG-58 for tying up newspapers. Use RG-8M or better with a stranded center for mobile use. Coax length does not matter. Use the amount needed from point A to point B with a little extra for slack and redoing the soldered, not crimped ends, when needed. The ground always pulls out of crimped ends.

Oh Yeah,

I find your complaints interesting.

Ok, so you call Signal Engineering and they won't just give out
the dimensions to their antennas. No surprise there, try calling
Cushcraft, Force 12, etc. etc. and just ask them for the
dimensions of an antenna, guess what, they don't just hand that
information out. I know you can buy the wire sets from Signal
Engineering, because I recently bought a new set for a used 4 element
from them.

BTW, the Cubex quads aren't dual polarity models. Also did you
tell Cubex about the special voltage feed arrangement that SE
uses, so they could tell you what length wire you needed for this
special matching section? Are you sure the antenna can handle the size
wire your going to use? Now that I think about it, if you
are messing with something you understood - you wouldn't need to ask
anybody for wire lengths at all, since formulas are available at any
local library in your area.

One little check of past NG posts reveals this post from you:

Subject: Help on Bill Owens RV antenna
Date: 01/22/1999
Author: American Eagle 360 <maps75@pvtnetworks.net>

<snip>
Like a dumby I sold mine without first at least
making a copy of the assembly instructions. Now I would like to
home-brew one of these true "gain" antennas
<snip>
Anyone that has one of these 'lil beauts that would photo-copy
the instruction manual, zip it and send it to me
would get all the 3s and 8s. I have the following manuals PDL II,
PDL II rear-end mod drawings
with measurements
....Shootins Star (current ant.), & Hi Gain stacked 3s
<snip>
maps75@pvtnetworks.net - Snail mailed at Al Piper - 903 Ray Ave.
- Artesia,NM 88210-0651 - 505-746-3901
THANKS and All the good numbers to yah!

So its clear you also approve reproducing copyrighted material
and exchanging it for the purpose of "home-brewing" your own

versions of the antennas.

I bet the engineers at Signal Engineering are laughing at you, I know I am.

Scott.

"Oh Yeah!" wrote:

To Whom it May Concern:

I (American Eagle 360) recently purchased a Signal Engineering
White Lightning 6, from a fellow CBer & Amateur that is out of
work and needed to liquidate some of his unused equipment. The
reason he wasn't using it, he had built a flat side yagi because of
his location is VERY windy. He had several of the #13 solid
copper elements vibrate until they broke and one occasion his
2" boom literally bent around the rotor mast. When he had taken
the antenna down, he simply took the fiberglass elements out of
the boom support tubes and zip tied the elements and wire to the
boom sections.
Upon buying the beam I called and requested the wire lengths of
the elements as I had planned to replace them with a product called
Flex Weave. A #14 168 strand jacketed wire so after building the
beam and getting it into place I wouldn't have to take it down for
some time. HERE comes the kick in the ass about Signal Engineering;
they have a answering machine that answers there business phone.
They will return the call as soon as they find the message, BUT they
will not under any circumstances give out the measurements of the
wire elements even to owners of their product. I even went as far
as to tell them I had the assembly instructions in front of me and would
quote to them from the manual to prove that I owned their product.

I am having to separately straighten each element and measure it to
find the lengths. I called today (12-5-'00) the firm of Cubex the manu-
facturers of the most famous amateur quad antenna. Their tech support
representative was most helpful in furnishing the K factor multiplier to
facilitate the conversion to jacketed material and told me that the difference
between #13 solid and #14 multi-stranded wire wasn't even worth the
effort to figure out.
To summarize the long of the story, Cubex one of the worlds best known
quad builders is producing a 4 element quad for about $20 dollars higher
than what Signal Engineering is offer theirs for. And Cubex is working on
a 6 element now. It should come in at slightly higher than what Signal
Engineering is currently asking for the White Lightning 6 for. Cubex uses
#10 wire and tailors their beam for the area that is going to be put up in.
They will even substitute Flex Weave at an additional charge upon request.
And they use a standard 3" boom for their antennas. And they are built
like a tank. SO IF YOU ARE LOOKING FOR A HEADACHE, BUY
SIGNAL ENGINEERING!! IF YOU ARE GOING TO BUY A QUAD
TO ENHANCE YOUR SIGNAL, BUY CUBEX, BUILD IT, PUT IT
UP AND FORGET IT!!

So what kind of training do you need, JR? I'm a reserve officer here near my QTH and I have no idea what kind of training you will need to report, conduct or augment an emergency. When relaying information during an emergency, thats all you do. Report the facts. Any simpler than that, the average Ham would go crazy. Thats why I can't understand the simple fact the ARRL has a training program for it. But... who's to say? Maybe some Emergency nets are complicated in a sense...

The thugs in rec.radio.cb are very upset. They have totally lost control of
who says what in the ng. Rumor is that they have looked for a way to shut you
down through the arrl and the fcc or your employer but the problem is they need
to remain anonymous and not reveal their identity so as a result no one will
take them seriously so they are going to try and do some kind of character
assasination, e.g. mass mail info that you're gay, a child molester,
pornographer, etc. to every newsgroup on the web.

778. Yesterdays secret message to N8wwm

This one came in yesterday...Laughed my ass off.

Subj: rec.radio.cb
Date: 12/5/2000 16:09:05 PM Eastern Standard Time
From: Deleted in case guy is legit
To: N8wwm

For a long time, a handful of career criminals in rec.radio.cb have "run" the newsgroup.

Criticism of "illegal cb" has not been permitted. Anyone taking issue with illegal practices is shouted down and run off.

But you seem have broken their backs.

The usual strategy is to torpedo anybody who's opinion they don't like. They publish the offender's name, home/work addresses, telephone numbers and usenet posting history.

But it didn't work with you. You're still there.

Next they will go after your ISP.

YOUR CONFIDENTIAL INFORMER

Subject: scanner
Can you talk with your chat room scanner buddies and have them send any information on Okaloosa County, Fort Walton Beach area frequencies..... You can give them my e-mail address and let them send the info directly to me... let me know if there are any questions.. The big question is that my brother is wondering if Fort Walton Beach went trunking or not...

Also, if you could; please send this guy any and all frequencies for all the municipalities in Okaloosa County-Florida and surrounding counties. If not the frequencies then at least the web page addresses.

Thanks a zillion, people

Major Tom is Major true, I have tested this in DX. I throw a big DC and barley get my name called at times, when I back off on the carrier and let her "swing batta batta" forward and my signal cuts right threw the trash. Down fall is as Tom mentioned, contributes to the enspandig envelope and harmonics. How to test this is put some ol rabbit ear antenna on the TV set at home and try the different carrier while monitoring channel???I forget which channel.

Anything losing power output under modulation has a major problem, period.
This in no way guarantees that upswing is clean or effective.

The Channel 2 pix carrier is at 56.25 the Channel 5 one at 77.25 and Channel
6 at 83.25 will reveal most harmonics assuming your set will work in a dead
channel. Video bandwidth extends at least 1.25 MHz either way.

Tim, that's the fine line between ham radio and your type of CB radio. I don't expect you to understand it. Sorry to say. Many hams are capable of coming to the CB channels with their ham setups, but a good operator won't do so. And the bad ones are freebanders like yourself. I'm proud of my call - no need to fool around on illegal freqs. Gary

Hello American Eagle 360:

I think I talked to you yesterday, about a Moonraker 4 Beam Antenna, you where talking about the bandwidth of the vertical as compared to the horizontal sides of the Moonraker 4 Bean Antenna.

Anyway, I can see where Signal engineering doesn't want their Quad dimensions out in public. But they should be able to offer to cut and identify the wire for you, I would think its worth a try to call them up and ask them for this as a inexpensive customer service. And then suggest to them that they need to offer the better wire as a option upgrade kit for all their antennas loop assemblies. And also offer a high wind boom upgrade reinforcement kit.

The 2 inch diameter mast used by Signal Engineering can be reinforced with a 1 7/8 inch .125 inch wall thickness aluminum tubing, (I believe, I have one in the garage I'll go measure for ya) which will cost close to 3 dollars a foot. I can get a few short pieces to reinforce the boom for you if you want? If not maybe you would like to sell the broken beam?

Didn't you say (if it was you I talked to?) that Cubex made the Hy-Gain 4 element quads for Hy-Gain?

Let me know what your plans on the antenna are.

Jay in the Great Mojave Desert

Why is it that so many people think that all CB is good for is to see who they can block out or coverup with their radio signal?CB radio is not a game or contest.
It is intended for communications for the general public who might have a need for such.Seems here lately that people cannot use the radio in its intended manner without someone trying to cut them off.We refer to it as "Stepping in someones pile".
I suppose it will never get back to being what it was designed and intended to be but I can still wish. Thanks for reading and Have a Merry Christmas.

Dennis in Ga.

its very fine indeed kari. so fine that the hams feel they have to jump up and down to show you exactly where that line is because the general public will never see it and that really hurts your types pride becayse your not getting the respect you want for passing those silly little test and for some odd reason those that are jumping up the loudest are usually the ones that cannot even pass all the test ie. no code techs.

Dennis, don't feel too bad. Their are some amateurs who act the same way. Come to think of it, there are some drivers who act the same way. Their road. A friend of mine had a number of CB walkies on a construction job and had some idiot trying to tell him to get those things off of CB, it wasn't designed for business. I wonder what the joker thought it WAS designed for. A small minority enjoy causing headaches for as many folks as possible. If enforcement does start taking place in larger numbers (and that is an iffy proposition, at best), it will be the larger stations (the killer-watters). Regardless, let's hope things quiet down a bit and everyone can enjoy their radio. I know one of my co-workers is using a 50 watt amp in his truck - not a lot, just enough so he can talk locally for 8 or 10 miles or so without getting stepped on by general interference during the day.

Greetings!

In a basic sense, accountability.

In relation to the Amateur community at large, saying your stations
call sign out on the air, is accountability, let alone identification.

In the CB realm, the above effort is a lost cause. Many don't have a
clue as to what the word means to them.

On Wed, 06 Dec 2000 00:10:06 -0500, while the modem was pondering it's
navel, Jerry Oxendine <joxendi@bellsouth.net> dissertated the
following:

:+> regulations are there to allow for the use of radio by the maximum # of
:+> people. If there were no regulations, there would be chaos and the
:+> spectrum would be unusable due to interference and encroachment of un-
:+> trained people onto emergency frequencies. No need for that? How would
:+> you like to be on an airliner whose navigation and comm radios were
:+> jammed by anybody and everybody who just wanted to talk to that thar
:+> aero-plane. The regulations are quite up to date, fill a need, and must
:+> be enforced to ensure that commerce, telephone traffic, AND hobby com-
:+> munications are protected from interference.
:+>
:+> My guess is they are trying to rid themselves of the enforcement burden
:+> as a
:+> > feel good gesture to the Ham community.
:+>
:+> NOT! It came about because of people (not hams) complaining to their
:+> Congressmen about CBers coming in on their TVs and church PA systems.
:+> FCC has shortsightedly been deprived of the funds to adequately do the
:+> job, so when said Congress members got no response from FCC, certain
:+> ones sponsored and, finally, got it passed. Hams had nothing to do
:+> with it.
:+>
:+>
:+> But there were plenty of Hams
:+> > supporting it. Why?, I am not sure just another meaningless crusade for a dinosaur on
its way to extinction.
:+>
:+> Sorry, but you are misinformed. Amateur Radio is alive and well. You
:+> cannot base your conclusions and generalities on what you hear within
:+> the CB community alone. I am not trying to be mean or flame you. But,
:+> the truth is, that it is the Amateurs who are called upon to provide
:+> backup communications in disasters such as fire, flood, hurricane, earth
:+> quake because of their training and proven professionalism under adverse

:+> conditions. NOT REACT, not CBers, but those hams you hate so much.
:+> Even disasters at sea often involve ham radio such as the Maritime Mo-
:+> bile Service Net on 20 meters. Remember the story about the young Dutch
:+> boy who was shot by pirates, or robbers and spent much time in a US
:+> hospital recovering? It was those "dinosaurs", as you call them, that
:+> got them help. Not CBers. You are merely misinformed about the basis,
:+> purpose, and proven value of the Amateur Service. All you have heard
:+> about are the "bad" hams. and you can go to www.rainreport.com to read
:+> about what's being done about them. Amateur Radio will not go away.
:+>
:+>
:+> > Emergencies can be handled by anyone with a radio It doesn't take a
:+> > license!! The fears of Commie,Pinko's invading our country or transmitting
:+> > information via ham radio is a little behind us. That was part of the reason
:+> > for the licensing to begin with. It was a way to try and control the use of
:+> > radios during a war paranoid society.
:+>
:+> Not so. See above. Licensing came about because of so many stations,
:+> both ham and commercial, coming on line that interference got to be a
:+> real problem. Something had to be done to prevent this, provide separ-
:+> ation, and control what operated where. Hence the Communications Act
:+> of 1934. If there were no regulations, people would just revert to
:+> the chaos prior to that Act. Lives would be lost, safety threatened,
:+> and YOU wouldn't even be able to enjoy what you have today.
:+> >
:+>
:+> > If the CB community wanted to take control of the 10 Meter band they have the power
to do it. Now that is a fact.
:+>
:+> Not so. It is that attitude of lawlessness that caused the local en-
:+> forcement thing to come about to start with. It had nothing to do with
:+> hams. It had to do with the disregard for regulations against high
:+> power, modded radios, splattering amps, and operating out of band. Now
:+> that might make people mad because I said that, but it is true. The
:+> 10 meter "Seigfried Line" WILL be defended--you can count on it. To
:+> do more, such as encroach on other non-CB bands, would have the opposite
:+> effect. It might cause Congress to rethink its reduced FCC funding,
:+> restore funds, allow FCC to hire many agents who would then go after
:+> the out-banders with a vengence. Not exactly ideal, huh? But it
:+> *could* happen.
:+>
:+> >
:+> >
:+> > > CitySlicker <manno_d@hotmail.com> wrote:
:+> > >
:+> > > : I suggest that all the CBers with 10 M rigs start using the 10 meter
:+> > band
:+>
:+> All that will do is cause more strife and hard feelings. It would, per-
:+> haps, cause a massive crackdown such as DOT inspections for linears in

:+> trucks, etc, or more laws, or bad stuff like the local enforcement
:+> thing. It wouldn't solve a thing. It'd just make it worse for every-
:+> body.
:+>
:+> 73
:+>
:+> Jerry

You can even classify people you hear on the radio into
the types on this site:

http://www.winternet.com/~mikelr/flame1.html

I just finished reading all the types and some had
me LMAO!

(I will place no judgment of the type on anybody here.
I'll let you figure it out for yourself.)

An international organization of fake, official SOUNDING callsigns started by a guy in Italy. the Alfa-Tango group is one of the first of the phonie callsign group. This is done to make the guy in Italy money, and by the members of that and all other phony call sign generating organizations for reasons of identity. I guess they think the made up call signs make 'em legitimate.

Many of these groups around. They generally operate SSB somewhere above/below the legal CB band. You can hear 'em on there a lot when the band is up. Kinda funny, actually...organizations like that.

The basic difference is price (of course) and features. Technical specs are going to be pretty much similar since they are limited to tight specs including power output, bandwidth available frequencies and antennas.

Some of these include weather receivers, signalling gizmos and the like. Range is going to be pretty much the same for either radio since the technical specs are going to be similar or identical. Range is moredependant on other factors anyway, like elevation and obstructions.

Hello,

I used to be the manager and technician and website creator and maintainer for CB City. If you would like to know anything about CB City, please feel free to ask and I will gladly give you the low down and how they shafted me after 6 years of hard work and dedication.

I have started my own website just of the purpose of letting people post stuff that they have for sale. I know that there are a lot of auction sites out there, but this kinda cuts out the middle man and makes it to where people can interact with one another when trying to sell their wares.
I have developed several websites with a great following and just wanted to stop by and invite you to come and check it out an to post the stuff that you may have for sale or to just browse the stuff that is already there.
This will take off very fast and it will build very rapidly. It is designed for anything that someone has for sale from Antiques to Electronics of any kind.

Come on by and check it out.

The link to the website is below.

http://www.chargerscastle.com

Thanks

Dean

Scott: You don't even have to go the library when
you
have 4 ARRL Antenna handbooks at your disposal.
But, because of their matching system I wanted to
keep
the wire elements the same. Yes, you are correct
they
will sell you new elements; what if you are in a
hurry to
get the antenna back on line? If you had the wire
lengths
all you would have to do is go to any motor
rewinding
shop and get the proper gauge magnet wire that is
enameled
also, soldier it and return the antenna to the
air. Instead I'm
having to straighten the wire with out stretching
it to a different
overall length. This is very time consuming to say
the least.
Yes, you are also correct in the fact that Force
12, etc. etc.
will not give out their dimensions, HELL NO they
are in the
instruction manuals to start with. Signal
Engineering just doesn't
want to cooperate with an owner of one of their
products. So
I'm simply helping them out, with some free
publicity. And as
to helping other people out that bought a antenna,
but weren't
so lucky as to receive the instruction manual with
it, Yeah I'll
help anyone out that needs a helping hand. By the
way Bill
Owens RV antennas are no longer in production, so
where
are you going to point me to, so I can purchase
one. I've had
four beams so far and this one is the cheapest
made piece of
shit I've ever bought, if that is what you call

RULES then you
have the lowest set of standards of any closet
AMer that I
have known for awhile.

Well said! I also have been licensed a short time thanks to the no-code requirement. I don't really have an interest in CW. I have been very active in Public Service and Red Cross events, working several each year. It is a pleasure to be able to provide a service in our community and lend a hand when emergencies arise, as in the recent floods in our area and to provide other disaster relief. That is what ham radio is all about. John KC7ZBV

David Little wrote:

Yes, it will be costly to do any of the fore
mentioned
activities. We will have to pay more police
officers to
cruise the neighborhoods to find some poor smuck
that
just wants to talk to a few far away friend they
have
collected over the years. Mean while back at your
QTH
some drug crazed fool is ripping off your new BMW
or
your great grandmothers china that you managed to
keep
all these years without getting them broken. Down
the
block some little girl is being molested and no
one can
come to her aid because some police officer that
doesn't
know the difference between a 2 meter antenna and
a
CB omni is harassing some fellow for talking over
the
155 mile limit on a band that runs long haul all
day long,
and a good portion of the evening. YES it will be
costly,
but to whom. Are you willing to pay somebody to
stay
at your house 24-7 to protect your stuff from
being ripped
off while some officer of the law is rubber
necking at every
piece of aluminum he sees on the roof top. I
DAMNED SURE
NOT!!!!!! Would you send a fireman to stop
animal
poachers, or a mechanic to pull over every one
that he
thinks start is talking to someone on a radio,
when the person
is on a cellular phone. Pay the extra money to man
the FCC

the way it was back in the 70s, when we have
people sleeping
in cardboard boxes in the alleys and eating from
dumpsters.
And who is going to pay for the lawyers when some
one sues
the shit out of the city for not having people
trained properly.
YOU, I think not!!!! Think before you leap, the
shit may be
deep.

No Scott, just laugh at the fool when his TV, VCR,
radio equipment, etc. etc. is being ripped off
while
a trained police officer is two block away
harassing
one of his fellow hams because he saw a 3 element
tri-bander in his back yard and couldn't tell it
wasn't
a CB beam that was breaking up his rerun of Andy
Griffith and Barney Fife. Then see who has to
chase
down the offender; N8wwm NOT! His stuff isn't
as important as the $295 they got from
the ham when he finally got mad and punched the
highly trained (OH, Yeah) law enforcement officer
in the bag of doughnuts he was carrying right
above
his sam brown belt.

Now let me get this clear; instead of the US
government
that started the first web, it was amateur radio
operators.
Now that is a good one. If you gave us the
rec.radio.cb
newsgroup, thanks you also gave us your frequency
after
you didn't use it. Now if you spend enough time on
this
newsgroup offending every CBer that you don't like
the
message he wrote, the ITU will probably have some
more
of your frequencies up on the auction block.
Instead of
cruising the newsgroup that could possibly produce
the
next Hiraim Maxim and belittling every one, you
could
be on the air talking to your friends. Lets see,
did I get
any light in those hollow halls you call a head.
Probably
not!

841. CB City CB Shop

Newsgroup: rec.radio.cb
Date: 2000-12-06 00:00:00 UTC
From: Dean <deanntx@tyler.net>
Message-ID: <3A2F033E.F5E871A2@tyler.net>
Source record: 62323

Just to let everyone know, the CB City CB Shop in Tyler Texas is one to be weary of.
If you are planning to do business with them, please be advised that they do not have a Technician on staff at all. They have resorted to a Mom & Pop business with the help of a 23 year old kid that helps with customers and installs. He used to install car stereos for his friends is his only experience.

The reason I am stating all this is because they really shafted me after 6 years of hard work an dedication. Three of those years I managed the shop by myself while the owner held another job at a place called Tyler Pipe, which he retired from 2 years ago.

I am not making false acusations. I have covered up for this man for the last 6 years in his underhanded ways and it will come to an end.

I created the website for CB City from the ground up and made it to where they were known world wide, and to be shafted the way that he did me, was not right at all.

I know, most of you are just hearing my side of the story and do not know all the facts, but what it ended over was me standing up for the 23 year old kid when the owner jumped down his throat and called him a "Lazy Mother F**ker" and I do not feel that any employer has the right to cross that line with an employee. So I retaliated and got in the middle of it and told him that he was wrong and should not speak that way to him and he fired me on the spot.

Anyway, if you have any questions that you would like to ask on any dealings with them or are thinking about dealing with them, please don't hesitate to contact me.

Thank you all for all the emails that I have received from you and may all of you have a very Merry Christmas.

Dean Arthur

Well Rick,

I recently upgraded to General because of the license restructuring. I
have found HF to be very enjoyable. Not a soul has asked me if I learned
20wpm or 5wpm code, in fact I haven't talked to anyone yet that really cares
whether or not I did. Since getting my Tech Plus in '99 and the General this
past August, I have rag-chewed with many wonderful people. I feel sorry for
people like yourself that carry a chip on their shoulder.

How heavy it must be...

From: CitySlicker <manno_d@hotmail.com>
Message-ID: <90k0fn$8eg@dispatch.concentric.net>
Source record: 62069

My suggestion was to prove a point and that is the majority have the power to control. I would hazard a guess that there are more Cbers with 10 meter capable rigs than there ham operators. If the CBing public wanted to use the 10 meter band they could with ease and there would be little enforcement to stop it.
If the general public wanted to buy ham radios of any frequency and use them it would be hard to enforce unless the sale was denied but that is easy to get around and I bet they would work fine without a license.
Personally I don't care what a ham operator has to say or think about me I really don't. If they don't care what the Cbing public is doing than why all of this hoopla to allow local enforcement of out of date regulations? My guess is they are trying to rid themselves of the enforcement burden as a feel good gesture to the Ham community. But there were plenty of Hams supporting it. Why?, I am not sure just another meaningless crusade for a dinosaur on its way to extinction.

Emergencies can be handled by anyone with a radio It doesn't take a license!! The fears of Commie,Pinko's invading our country or transmitting information via ham radio is a little behind us. That was part of the reason for the licensing to begin with. It was a way to try and control the use of radios during a war paranoid society.

Bill your facts are cock-eyed and elimination of 11 meter band would require the destruction of many millions of radios around the world. Lots of Luck. If the CB community wanted to take control of the 10 Meter band they have the power to do it. Now that is a fact.

When you turn it on does the panel light up? If not, check your in line fuse. If it does light up, you have to enter the 4 digit security code to access radio functions. Check you owners manual for the standard code. If it is another code, good luck.

Email me for standard code - refuse to post - too many lurkers.

JR,

Do yourself a favor and just try it. Don't proclaim something as being -not likely to be anywhere near 50 Ohms- until you try it yourself. I have done it and I assure you it is deadly close to 50 Ohms at 27MHz and 110% safe. A couple of messages back you didn't know how to get 50 Ohms from four 50 Ohm loads used together and now you have the audacity to question my original premise without even investigating it? Turn the computer off, go to the local library and get up to speed on basic electronics. Then you can come back and add some value to the group.

MC just got down!

I'm no antenna expert, but dBi is not equal to a dipole in free space.
It is equal to an isotropic antenna. The definition of isotropic is
-Identical in all directions; invariant with respect to direction.- A
dipole in free space does not radiated equally in all directions under
any theoretical condition. A good example of an isotropic antenna is the
sun. (this is of course if you believe in the wave theory and not the
particle theory of light <grin>). I think we are all in agreement that
it radiates its energy equally in all directions.

As for splitting dBd into different groups. This is a bunch of hogwash.
Antennas are measured in anechoic chambers which are, you guessed it,
equal to free space. There are no reflections and no reactive components
to skew results.

I went looking for some articles on the 'net about the Russian
Woodpecker and there are a couple of good ones. There are also a couple
of whacky conspiracy theories about it too. I dunno what it is about
some people but they'd rather believe a paranoid story than reality. Why
is that?

I know perfectly well how to series/parallel resistances/impedances to arrive at another resistance/impedance. I just wondered if you did. As far as basic electronics, my entire career has been in electronics/computers. I was probably working in electronics before you were born.

> stop it.
Right.....you're guessing.

why all
> of this hoopla to allow local enforcement of out of date regulations?

The reasons for regulations have nothing to do with "war paranoia". The regulations are there to allow for the use of radio by the maximum # of people. If there were no regulations, there would be chaos and the spectrum would be unusable due to interference and encroachment of un-trained people onto emergency frequencies. No need for that? How would you like to be on an airliner whose navigation and comm radios were jammed by anybody and everybody who just wanted to talk to that thar aero-plane. The regulations are quite up to date, fill a need, and must be enforced to ensure that commerce, telephone traffic, AND hobby com-munications are protected from interference.

My guess is they are trying to rid themselves of the enforcement burden
as a
> feel good gesture to the Ham community.

NOT! It came about because of people (not hams) complaining to their Congressmen about CBers coming in on their TVs and church PA systems. FCC has shortsightedly been deprived of the funds to adequately do the job, so when said Congress members got no response from FCC, certain ones sponsored and, finally, got it passed. Hams had nothing to do with it.

But there were plenty of Hams
> supporting it. Why?, I am not sure just another meaningless crusade for a dinosaur on its way to extinction.

Sorry, but you are misinformed. Amateur Radio is alive and well. You cannot base your conclusions and generalities on what you hear within the CB community alone. I am not trying to be mean or flame you. But, the truth is, that it is the Amateurs who are called upon to provide backup communications in disasters such as fire, flood, hurricane, earth quake because of their training and proven professionalism under adverse conditions. NOT REACT, not CBers, but those hams you hate so much. Even disasters at sea often involve ham radio such as the Maritime Mo-

bile Service Net on 20 meters. Remember the story about the young Dutch boy who was shot by pirates, or robbers and spent much time in a US hospital recovering? It was those "dinosaurs", as you call them, that got them help. Not CBers. You are merely misinformed about the basis, purpose, and proven value of the Amateur Service. All you have heard about are the "bad" hams. and you can go to www.rainreport.com to read about what's being done about them. Amateur Radio will not go away.

> Emergencies can be handled by anyone with a radio It doesn't take a

> information via ham radio is a little behind us. That was part of the reason
> for the licensing to begin with. It was a way to try and control the use of
> radios during a war paranoid society.

Not so. See above. Licensing came about because of so many stations, both ham and commercial, coming on line that interference got to be a real problem. Something had to be done to prevent this, provide separation, and control what operated where. Hence the Communications Act of 1934. If there were no regulations, people would just revert to the chaos prior to that Act. Lives would be lost, safety threatened, and YOU wouldn't even be able to enjoy what you have today.
>

> If the CB community wanted to take control of the 10 Meter band they have the power to do it. Now that is a fact.

Not so. It is that attitude of lawlessness that caused the local enforcement thing to come about to start with. It had nothing to do with hams. It had to do with the disregard for regulations against high power, modded radios, splattering amps, and operating out of band. Now that might make people mad because I said that, but it is true. The 10 meter "Seigfried Line" WILL be defended--you can count on it. To do more, such as encroach on other non-CB bands, would have the opposite effect. It might cause Congress to rethink its reduced FCC funding, restore funds, allow FCC to hire many agents who would then go after the out-banders with a vengence. Not exactly ideal, huh? But it *could* happen.

>
>
> > CitySlicker <manno_d@hotmail.com> wrote:
> >
> > : I suggest that all the CBers with 10 M rigs start using the 10 meter
> band

All that will do is cause more strife and hard feelings. It would, perhaps, cause a massive crackdown such as DOT inspections for linears in trucks, etc, or more laws, or bad stuff like the local enforcement thing. It wouldn't solve a thing. It'd just make it worse for everybody.

As an avid cw operator and a ham for over 29 years I must say you are completely wrong. I see more cw operators joining our ranks. They may enter at 5 wpm, but they enter none the less. With time and training from experienced hams they will attain proficiency in cw. If they choose to do other modes such as digital etc. So What. It does not make them any less a ham. It gives us diversity and fills up spectrum that otherwise would be wasted or sold to competing interests which would be the death knell for the hobby as we know it. If you are a ham please identify yourself with your call sign. That way when I hear you on the air I can go another direction. 73 OM

That's odd. I thought that the ARRL did everything in could to keep the status quo. In fact, some "Ye Olde Fahrtz" of the Ancient Radio Relay League are trying to get the FCC to go back to the old code testing scheme.

Correct you are Sir! That is indeed another band, as is one, in the 3.3 MHz band. It is a propagation thing, as we get into winter, they will migrate lower in freq because of the MUF.

Thank You Raymond,

On the other end of the spectrum, I am not a big advocate of CW. It is a stumbling block that I haven't been able to overcome. However, I have interests in home-brew, repair and digital modes. I spend a good bit of time answering questions for other hams on areas that I do understand and even more time trying to get a better understanding of things that I don't. I also try to promote the hobby to others in a manner that is not over-bearing and from a god-like stance. I feel that the license is just a key to the door, and the new ham can take which ever fork he or she chooses after entering the realm Amateur Radio.

Now, more than ever, we need to be more gracious about extending the invitation to out ranks to replace the numbers that we have lost to attrition and attract the technical minds that have been previously turned away by the direction the League has taken in the past. I have been licensed less than 10 years, and have grown up in the shadow of Ham radio; only having a shot at it since the code requirement was dropped for entry level. I have made contributions to the hobby in many areas, and will continue to do so in the future; despite my lack of CW endorsement. I would also go the limit to support your love for CW as one of the freedoms we enjoy, on the merits of freedom alone.

I hope we can be more aware of the jealousy the industry has for the spectrum we have been awarded, and the value on the open market for it at FCC auction. If we don't do something soon to keep the numbers and usage of our current spectrum in the high percentages, it will soon go the way of the 1 1/4 meter bandwidth we lost in the beginning of the auction period. This period is still in effect until 2002 when the FCC can petition for an extension. Many among our ranks aren't even aware of this peril, and choose to ridicule others that bring it up. It needs to be in the forefront, as a constant reminder, and a level-keel approach needs too be maintained in the future.

A change in the Scope or Magnitude in the testing procedure does not necessarily mean a loss of integrity for the hobby. I would be in favor of a more in-depth technical requirement if the CW is dropped from the roster as a result of the meeting in early 2001. As it stands, CW is no longer an issue with the ITU, only the IARU; where the ARRL is the only member that still advocates it's inclusion as a requirement. That in itself is a bit of an embarrassment, as well as an open defiance to the numbers that their own internal polling yielded as early as 1996 concerning their stance on CW as a requirement.

We should hope that the League will strike a pose that is representative of it's supporters before it "stubborns itself out of existence." We do need a representative body to protect our interests, and sometimes we have to get their attention when the direction they choose to take is contrary to our continued existence. Let's hope that the result of current process of petitioning the ARRL for changing their stance in the IARU in the 2001 meeting doesn't result in a quagmire such as the one the 2000 presidential election turned into. The jury is still out on what negative effects will result from that example of "what one person trying to out stubborn the other can do" .

As long as we all maintain an open mind, and "keep out eyes on the prize", we will prevail.

Mark,

This happens often here. FWIW, my early explanation captured the spirit of the difference in gain references used in the industry. The actual mathematics and engineering behind those standards is still a matter of interpretation, and the manufacturer's specs prove that concept.

In Beam antennas, most manufacturers will go for good rejection and low SWR and use a gain figure that is not always close to accurate. The user puts the antenna up, the SWR is as promised, the antenna shows both directivity and selectivity, and the customer feels no need to question the gain figure.

If you have the provisions, the most simple way to measure gain would be checking performance between a 1/4 wave groundplane and another antenna claiming gain, using the same rig, the same out put power and the same height. A remote switched antenna selector greatly enhances the probability of the experiment to produce usable results. A receiver with a accurate S-Meter at a distant location is used to measure the results of the dead-key (un modulated AM Carrier) of the antenna under test. The test must include signals sent from both antennas in the shortest time period possible to lessen the effects of propagation from skewing the results.

This will let you know if the antenna has gain. However, ground plane radials, lack of ground plane radials, vertical or horizontal polarization; anything that can change the angle of radiation or polarization of the signal before reaching the test receiver also play a part in making the results a matter of "fuzzy logic" at best. Also the term "Accurate S-Meter" is a candidate for the "Oxymoron of the month club". If there is sufficient difference for evaluation, logarithmic math is necessary to convert s meter readings to actual gain figures, as it is not a linear progression.

Some antenna makers have more integrity than others, and their specs often seem much lower than the product of their competitors. Unless you are in the industry, or have an elaborate test setup and carefully controlled conditions, it is virtually impossible for the lay person to produce accurate measurements of gain, other than comparative testing.

In other words, personal testimonial of ownership over a period of time, on air comparisons, incidence of lightning strike (if you are in an area of high probability), deterioration of components (fiberglass integrity is usually compromised after 5 years UV exposure, some better and some worse), parts availability, customer service, track record of manufacture and many more items that my feeble mind can't recall or anticipate should be used in evaluating an antenna purchase. It is the single-most important factor in the performance of a 2 way communications installation; either base or mobile.

Intended use also has a high factor. Angle of radiation is a factor if your main desire is DX. For local talk, a lower angle of radiation may be more a factor than gain if you like to talk with the neighboring counties. There is little more rewarding than late-night roundtable activity using a good antenna and low power. Unfortunately, this is an avenue of the hobby seldom visited anymore.

I don't know if there will actually be a definitive description of what gain is actually measured against that everyone agrees with. The problem is further complicated by the knowledge of those discussing the theories used in measuring gain. The more you learn about measuring gain, the more you realize the futility of explaining it in simple terms with repeatable results. I don't think any of the explanations I have read here lack merit, and you saw how many ways my original reply was shot down..... I admit to being no expert. I am about 2 clicks above casual disinterested observer status, but do have an interest in the subject and the original topic.

Just my $.02 worth (adjusted for inflation)

David

Yea, yea. Spend the $750 and then talk like a big man
because no one can catch you. If you really did this
you're the biggest piece of shit here.

Believe it or not, that happened in 1966, Bill. The 1959 ITU Geneva Radio Conference dictated that spark would finally be prohibited on 1/1/66.

Why is it that so many people think that all CB is good for is to see who they can block out or coverup with their radio signal?CB radio is not a game or contest.
It is intended for communications for the general public who might have a need for such.Seems here lately that people cannot use the radio in its intended manner without someone trying to cut them off.We refer to it as "Stepping in someones pile".
I suppose it will never get back to being what it was designed and intended to be but I can still wish. Thanks for reading and Have a Merry Christmas.

Yep, Fred and Dick. We have the same kind of calls here, too. The modern system allows us to pick any vacant call for maybe 180 US dollars - code or no code, haw haw. I was merely pointing out to Tim that there can be other aspects in the discussion, too. You should've heard old Finnish Extras having a heart attack when our Novices got ssb rights on eighty: they thought you can't operate ssb on eighty in the same way as on the other Nov bands. So ridiculous - I tried to calm them down, and my students at oh8abi work real nice on 80m, also ssb, although most of them don't master CW yet. Gotta run back to work now, C U, 73 Gary

Which is "a knowledge of Morse" as required by ITU.

> and pass the written tests

Gosh, a 5wpm test and a written exam -was- the original amateur exam
back in 1918. If it was good enough back then when morse was a valid
means of encoding information, its more than good enough now. Don't
forget, youse guys whined and complained about the shift from spark to
cw as well.

Oh, so I should pick my allies on the basis of trying to win a popularity contest instead of who's right... why didn't I think of that... NOT!

You go ahead and be an ass kisser to these morons... keep them laughing with your jokes... so they won't carve you a new rectal orifice!

No!
You should pick your allies carefully because you have been here long enough to know better. You obviously make friends easily and hence the reason you are so popular here and probably at the workplace. As far as me, well I NEVER kiss ass, but I have been known to kick a few back in the day! I dance to my own beat and if you dont know that then you haven't been paying attention. I give the jokes mainly for pleasure since a few years back it got very negative in here and I decided not to be part of that anymore. I would like to ask why you are so transfixed on my rectal area? Also are you saying you dont laugh at my jokes? I am appalled!!!!

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't mean a THING if you ain't got that SWING!!!!!!!

This is an example of what self-regulating conditions is about. Some problems tend to cure them selves and go away without intervention.

This is the epitome of the concept "My father beat me when I was a child, and you're Damn right, I'm gonna beat my kids too".

No body mentioned taking disipline out of the regiment of licensing requirements. This is the reason that Ham radio faces the current peril it is experiencing in shrinking numbers and likelihood of spectrum privileges to match the numbers. Any attempt to allow transfusion of new technical lifeblood is viewed as a fatal stab wound.

It was a term of derision used among commercial ops in the same sense as
'ham' actor. It beats another term current at the time, Plug, as in plug
horse.

It's already spiraling downward Bill. Not by a present lack
of operators or technology, but a minus growth of new Op's.
What kid tell me want's to speak on a ham radio and use 9600
baud packet radio when instead they can be
on the Internet with 56K or DSL, streaming audio and
video, realtime chatrooms and who know what else
is comming sown the supply chain? Heck, for under $600.00
I can have a 700 MHz Multimedia machine that will do
everything short of put the coffee on in the morning. (and when
the next generation of Internet ready consumer goods hits
the market I will be able to do that too) Contrast that to
a Radio Shach 2 meter rig that's busy with redundant "drive
time" talk and totally dead airtime the rest of the day to
keep one amused. Guess what the young people will choose
Bill? Hey, it's ok. Hamfests are drying up on the vine and
Dayton attendance is way down. The writing is on the wall
Bill----> Ham radio is obsolete because it's CORE PURPOSE
for existence is no longer relavant. Sure if the power goes out
we can pass some traffic, but that's about all. The bulk of
support now goes to private and professional emergency management
authorities, for whom ham radio is a non-productive obsolete accessory.

The "only" one? Didn't a Euro country recently reinstate their code
requirements for HF privileges?

>Do you realize how far out of step the United
>States amateur community appears to be to the rest of the world?

Do you want us to be like the rest of the world? Are you suggesting
a UN-administered radio exam? Or should we be like Malaysia and have
you submit your station to an annual inspection? That country still
requires a code exam and an applicant might have to wait as long as
one year to receive his license after passing a battery of exams.

Be careful what you wish for, Dave.

It amazes me that people make such asinine comments
like "I'm gonna turn in my license" kind of thing.

Well SHUT UP and DO IT! If you're going to be an
ass and make comments like that BACK THEM UP!!

You're just showing yourself to be more of an idiot with
whining like that.

I heard the same thing with the drop to 5wpm. Guys
CLAIMING they were turning in their extras to get
Advanced licenses. What horse hockey. Big mouths
making a lot of noise.

But show me one who did.

You threw down the gauntlet, lets REALLY see you give
up your license.

Or STOP WHINING!

Mike
(And I won't give up my license. I won't say I will,
and I won't. If fun. It's a hobby. It's not a lifestyle.
And if idiots actually DO turn in their license, it's just
one bit less QRM I have to deal with.)

Bill,
It would seem you don't have a basic understanding of the differences
between a commercial radio license and an amateur one. We as amateurs
are allowed to build our own equipment without restrictive certification
requirements imposed on commercial manufacturers. This is the major
difference that sets us apart from other radio services. Without this
one major difference we are just CB.

Subject: What if Santa Answered His Letters Honestly?

Deer Santa,
I wud like a kool toy space ranjur fer Xmas. Iv ben a gud boy all yeer.
Yer Frend,
BiLLy

Dear Billy,
Nice spelling. You're on your way to a career in lawn care.How about I send you a fucking book so you can learn to read and write? I'm giving your older brother the space ranger. At least HE can spell!
Santa

ï¿½----------

Dear Santa,
I have been a good girl all year, and the only thing I ask for is peace and joy in the world for everybody!
Love,
Sarah

Dear Sarah,
You're parents smoked pot when they had you, didn't they?
Santa

ï¿½----------

Dear Santa,
I don't know if you can do this, but for Christmas, I'd like for my mommy and daddy to get back together.Please see what you can do.
Love,
Teddy

Dear Teddy,
Look, your dad's banging the babysitter like a screen door in a hurricane. Do you think he's gonna give that up to come back to your frigid mom, who rides his ass constantly? It's time to give up that dream. Let me get you some nice Legos instead.
Santa

ï¿½----------

Dear Santa,
I want a new bike, a Playstation, a train, some G.I. Joes, a dog, a drum kit, a pony and a tuba.
Love,
Francis

Dear Francis,
Who names their kid "Francis" nowadays? I bet you're gay.
Santa

ï¿½----------

Dear Santa,
I left milk and cookies for you under the tree, and I left carrots for your reindeer outside the back door.
Love,
Susan

Dear Susan,
Milk gives me the runs and carrots make the deer fart in my face when riding in the sleigh. You want to do me a favor? Leave me a bottle of scotch.
Santa

ï¿½----------

Dear Santa,
What do you do the other 364 days of the year? Are you busy making toys?
Your friend,
Thomas

Dear Thomas,
All the toys are made in China. I have a condo in Vegas, where I spend most of my time making low-budget porno films. I unwind by drinking myself silly and squeezing theasses of cocktail waitresses while losing money at the craps table. Hey,you wanted to know.
Santa

ï¿½----------

Dear Santa,
Do you see us when we're sleeping, do you really know when we're awake, like in the song?
Love,
Jessica

Dear Jessica,
Are you really that gullible? Good luck in whatever you do. I'm skipping your house.
Santa

ï¿½----------

Dear Santa,
I really really want a puppy this year. Please please, please PLEASE PLEASE could I have one?
Timmy

Dear Timmy,
That whiney begging shit may work with your folks, but that crap doesn't work with me. You're getting a sweater again.
Santa

ï¿½----------

Dearest Santa,
We don't have a chimney in our house, how do you get into our house?
Love,
Marky

Dear Mark,
First, stop calling yourself "Marky", that's why you're getting your ass whipped at school. Second, you don't live in a house, in a low-rent apartment complex. Third, I get inside your pad just like all the burglars do, through your bedroom window.
Sweet Dreams,
Santa

948. Illegal CB

Newsgroup: rec.radio.cb
Date: 2000-12-07 00:00:00 UTC
From: aaronvoobner@my-deja.com
Message-ID: <90p2ps$6qm$1@nnrp1.deja.com>
Source record: 62363

Recent approval of HR2346 indicates that the general public has little if any tolerance or sympathy for illegal Citizens Band activities, especially when they infringe on the rights of the average person to operate a consumer device without being subject to unreasonable interference. It would seem to me the CB community would be vitally interested in cleaning up its act. Instead, I have observed an ostrich-like mentality that continues to deny the problem, combative postures that challenge and defy the law and praise the illegitimate, and laughable propaganda that attempts to stampede the amateur community. Especially here in rec.radio.cb discussion of legal vs illegal should be pursued rather than squelched. Honest debate in the tradition of Mark Fuller should be encouraged. It's your choice. It's your band. You can clean it up or continue to allow other people to soil it.

I think the general public doesnt have a clue about HR2346 . The only people affected will be people who are suffering from interference whether it is from a illegal or legal station there complaints may be heard by a police officer . Many of the so called effected devices fall under part 15 they must accept undesirable operation. End of Story.

>repeaters in SoCa? Heck, I ain't heard more
>unlicenced spanish speaking bootleggers on
>the air, even on the high end of 20M band!

You know, I DID try to get something done.

It's not the Spanish that bothered me, it was the profanity and complete
lack of rules on several high-powered, well-positioned repeaters up
toward L.A..

I was told but SANDARC (sp?) that they weren't willing to take action
against those systems, because if they WERE to get them shut down,
the users there would get on other repeaters (club systems) and do the
same thing.

I pretty much quit using my license after that.

The Pentagon recently found it had too many generals and offered an early retirement bonus. They promised any general who retired straight away his full annual benefits plus $10,000 for every inch measured in a straight line between any two points on the general's body, with the general getting to select any pair of points he wished.

The first man, an Air Force general, accepted. He asked the pension man to measure from the top of his head to the tip of his toes. Six feet. He walked out with a check of $720,000.
The second man, an Army general, asked them to measure from the tip of his outstretched hands to his toes. Eight feet. He walked out with a check for $960,000.

When the third general, a grizzled old Marine, was asked where to measure, he told the pension man: "From the tip of my penis to the bottom of my testicles." The pension man suggested that perhaps the Marine General might like to reconsider, pointing out the nice checks the previous two generals had received. The Marine insisted and the pension expert said that would be fine but that he'd better get the medical officer to
do the measuring. The medical officer attended and asked the general to drop 'em. He did.

The medical officer placed the tape on the tip of the general's penis and began to work back. "My God!" he said. "Where are your testicles?" The general replied, "In Vietnam."

A few days after Christmas, a mother was working in the kitchen and listening to her son playing with his new electric train in the living room. She heard the train stop and her son said "All of you sons of bitches who want off, get the hell off now 'cause this is the last stop, and all of you sons of bitches who are getting on, get your asses on the train 'cause we're leaving."

The mother went in and told her son, "We don't use that kind of language in this house. Now I want you to go to your room for two hours. When you come out, you may play with your train again, but I expect you to use nice language.

Two hours later,the mother was still working in the kitchen. Her son comes out of the bedroom and resumes playing with his train. Soon the train stopped and the mother heard her son say, "All passengers who are disembarking the train, please remember to take all of your belongings with you. We thank you for riding with us today, and hope your trip was a pleasant one. We hope you will ride with us again. For those of you just boarding, we ask you to stow all of your luggage under the seat. Remember, this is a non-smoking train except in the club car. We hope you will have a pleasant and relaxing journey with us today, and for those of you who are pissed off about the two hour delay, please see the bitch in the kitchen."

Once we became extra class we no longer had to do such mundane tasks as
soldering. these tasks are best relegated to those that have not achieved
our exalted status. We are gods of amateur radio!

sounds like you are an extra class operator who is scared he lost the elite status you felt you had cause you could do something not everyone else could do poor baby if you restrict the bands like that the hobby will die and everyone will lose a lot more than your elite status of being an extra class operator

It all very simple. There are 10 million other threads for you to post *your* feelings on HR2346..but that wouldn't stand out enough. It would be buried in the with the rest of useless posts. I'm saying you're a troll..I don't care about your views. Views which, have been repeated over and over in the other 10 million threads here and other ham/cb boards. Get it now?

On top of that troll, when I stopped and asked the local policeman if he knew what HR2346 was, he replied "Huh?". Theres nothing to talk about now...nobody knows how this is going to play out.

Bob the illegal CBer, committing crime against humanity.

Now here is a well considered post that does credit to HAM operators and newsgroupies alike. Thank you Fred!

To make statements like, "Bill Clinton is my hero" should be obvious for what it is, flamebait.

I copied this for the good of the ng:

Q: What happens if I do not allow the FCC agent to inspect my equipment?

A: Failure to allow inspection forecloses the opportunity to resolve the problem. Thus, refusal to allow inspection is a serious challenge to the Commission's authority to inspect radio stations and is a violation of the Rules. Such a refusal may lead to revocation of a license, maximum monetary forfeiture, or other Commission sanctions.

So, if you have a CB transmitter you could lose your license, hmmm... sounds like a HAM problem to me!

Fortunately there is one more or less Libertarian crowd left in radio land and it is on the CB bands where the feds just can't get to us .. yet. If the courts award Gore the presidency look out!

The only purpose of the new regs was to find another group for whom the fourth amendment would no longer apply -HAM radio operators. There is a certain stereotype that suggests HAM's may be especially compliant, that might even welcome such regs and feel privileged to have their privacy invaded.

These are the people you meet who think compulsory lie detector tests, drug tests, searches, etc. are fine under the "if you have nothing to hide" theory.

Forget about the integrity and dignity of free men. These kinds of people have always been with us and are often a majority of the population. Don't forget there was a lot of sympathy for the Nazi's in this country before it became politically intolerable to express such sentiments.

The people who approve these kinds of regs are the kinds of people who helped Hitler and Mussolini, Stalin and Mao, rise to power. The American revolution nearly failed because of the large number of them in the colonies. So they are with us an always will be.

You just have to keep fighting for your freedom. Vote, write letters, write guest editorials in your local paper and when you're on a dark road and find a guy like N8wwm and there is no one else around .. shoot him, for the sake of freedom!

I dislike that kind of flaming too. On the other hand, you are actually writing in support of further empowering a federal agency with extra-4th amendment powers, further eroding the value of the constitution. There is nothing wonderful about transmitters that interfere with television, computers, aviation radio communications (my pet peeve) but I would rather have these inconveniences than give another federal cop more search authority.

Since I have a CB, therefore, I am a CBer when using a CB and a HAM
Radio Licensee when using an Amateur Radio. So much for my disclaimer.
I have served as an OO (Official Observer with the ARRL), For those not
familiar with the term, think FCC Ham Auxilliary. As a paralegal in
Louisiana, I hope to analyze this bill and what I see as the future of
the Radio hobbies, both CB and HAM. I live in the 3rd Congressional
District (Home of Rep. Billy Tauzin) and did express an interest in the
Bill to His Office as a parivate citizen. From the Congressional Record,
this bill was on steamroller, so methinks that
local govt types lobbied heavy for the bill.

H. R. 2346

SECTION 1. STATE AND LOCAL ENFORCEMENT OF FEDERAL COMMU-NICATIONS
COMMISSION REGULATIONS ON USE OF CITI-ZENS
BAND RADIO EQUIPMENT.
Section 302 of the Communications Act of 1934 (47 U.S.C.
302a) is amended by adding at the end the following:

---With Mr. Clinton's Signature, it became the Law Or did it?

ï¿½ï¿½(f)(1) Except as provided in paragraph (2),

---A limit or exception is placed in the bill to prevent regulation of
---"licensed" operations, hey wait a minute isn't CB licensed by rule?
---True, so long as Part 95 isn't violated.

a State or local
government may enact a statute or ordinance

---That is the permission given, TO ENACT a statute or Ordinance which
---sets forth a prohibition of a violation (very important, since it is
---only a prohibition (meaning Injuctions and fines)) furthermore, a
---local govt entitity must enact a "Law" before allowing themselves to
---"regulate" CB.

that prohibits a
violation of the following regulations of the Commission under
this section:

-Now the locals have passed a "LAW!"

ï¿½ï¿½(A) A regulation that prohibits a use of citizens band
radio equipment not authorized by the Commission.

---Meaning? Anything NOT TYPE APPROVED (see tag on
---your radio, no FCC approval, BINGO, violation, so what's next?

---if no Amateur License, ipso facto (by the facts) A VIOLATION.
---Now, does Officer Friendly, your Local LEO, know about thes things?
---Probably not much, so his two main concerns at this point will be:
---1. What kind of radio or equipment is this?
---2. Do you have a license for this stuff?
---Remember the word USE in 1(A), well define "in use" does that that
---mean possession or actual operation? GREY AREA!

ï¿½ï¿½(B) A regulation that prohibits the unauthorized operation
of citizens band radio equipment on a frequency between 24
MHz and 35 MHz.

---AH, unathorized operation is pretty clear but who will determine
---unauthorized operation? Well, remember Officer Friendly, our local
---LEO, will he be sufficiently trained or will others (meaning some
type
---of radio cops i.e. OO or local annointed radio types be put in
charge?)
---Detection is 9/10ths of determining the specific violation. Inside
the ---Amateur 10 Meter Band, Amateurs Self Police their bands (I know
its not a
---perfect world, Hams hve their fools also) so will Officer Friendly
use
---the Hams, it will depend on the locality and how close the hobbyists
are
---to Officialdom. In some places, I could envision athe Hams being
given
---free rein and other places being prosecurted for that "Darn CB Radio"
---since some folks don't know the difference!

ï¿½ï¿½(2) A station that is licensed by the Commission pursuant
to section 301 in any radio service for the operation at issue shall
not be subject to action by a State or local government under
this subsection.

--=Pretty clear, but will it work? The key words are, "Operation at
issue"
---since operation by a Ham outside 10 meters will probably not be
covered by
---his or her license. Any Amateur Licensee who tries to cover 27.555
---Operation with his or her License will probably get a rude awakening
---since the review procedures will be in front of the FCC with
concurrent
---jurisdiction.

A State or local government statute or ordinance
enacted for purposes of this subsection shall identify the exemption
available under this paragraph.

---A clause that must be included to spell out the exemptions and how
---to apply them.

ï¿½ï¿½(3) The Commission shall, to the extent practicable,

---"Extent Practicable" is a fine way to say, "I am limited by my
---resources."

provide
technical guidance to State and local governments regarding the
detection and determination of violations of the regulations specified
in paragraph (1).

---Probably it will be just a booklet and guidepost written to set out
---the basic facts, how to identify non type accepted radios, what is
---a linear, what are the legal modes of operation, what is AM and SSB,
---legal power limits and determination of power output. Will this be
---enough? Only time will tell after we can see what will be developed.
---FCC resources are limited, it will behoove us to see what manner
--of technical assistance will be given.

ï¿½ï¿½(4)(A) In addition to any other remedy authorized by law,
a person affected by the decision of a State or local government
agency enforcing a statute or ordinance under paragraph (1) may
submit to the Commission an appeal of the decision on the grounds
that the State or local government, as the case may be, enacted
a statute or ordinance outside the authority provided in this
sub-section.

---It will be prudent to a locality to only legislate what is in their
---direct power to regulate, anything above their power (Ultra Vires)
---could leave them open to attack.

ï¿½ï¿½(B) A person shall submit an appeal on a decision of a State
or local government agency to the Commission under this para-graph,
if at all, not later than 30 days after the date on which
the decision by the State or local government agency becomes
final, but prior to seeking judicial review of such decision.

---Within 30 days is a short time period yet as long as the commission
---puts out a formula for timely appeals and follows through with a
---knowledgable person to review the cases, however, if it becomes a
---hassle to deal with, judicial review could cause headaches with
---precedents being set about radio operation outside the Federal
---Court System.

ï¿½ï¿½(C) The Commission shall make a determination on an appeal
submitted under subparagraph (B) not later than 180 days after
its submittal.

---180 days is generous, long enough to really run a legal bill.
---Bad decesions should be set aside quickly as a routine matter.

ï¿½ï¿½(D) If the Commission determines under subparagraph (C)
that a State or local government agency has acted outside its
authority in enforcing a statute or ordinance, the Commission shall
preempt the decision enforcing the statute or ordinance.

---If preempted, how quickly can this clause be carried out?

ï¿½ï¿½(5) The enforcement of statute or ordinance that prohibits
a violation of a regulation by a State or local government under
paragraph (1) in a particular case shall not preclude the Commission
from enforcing the regulation in that case concurrently.

---The killer clause, if the local system says you are using high power
---on freeband and you counter with the claim that you were operating
---on 10 meters and if the evidence points to illegal operation, you
might
---just face locals and FCC action. Double Jeopardy you say, but in
civil
---actions its dicey.

ï¿½ï¿½(6) Nothing in this subsection shall be construed to diminish
or otherwise affect the jurisdiction of the Commission under this
section over devices capable of interfering with radio communica-tions.

---FCC keeps their finger in the pie.

ï¿½ï¿½(7) The enforcement of a statute or ordinance by a State
or local government under paragraph (1) with regard to citizens
band radio equipment on board a ï¿½commercial motor vehicleï¿½, as
defined in section 31101 of title 49, United States Code,

---Read "ANY TRUCK DOING WORK"

shall require probable cause

---if Mr. trucker transmits and Mr. LEO gets solid evidence of a
---violation, then its probable cause but this stops Local Leos
---from doing a radio inspection for the hell of it (FISHING TRIP).
---A visible Antenna is NOT probable cause so a trucker will have to
---be caught in the act. It will be interesting to see how trucking
---firms will advise their drivers on this matter.

to find that the commercial motor vehicle
or the individual operating the vehicle is in violation of the
regulations
described in paragraph (1).ï¿½ï¿½.

---See Probable Cause.

IMHO

This bill was passed not because of the ARRL or the EVIL HAMMIES but too
Many Local Jurisdictions complained to the FCC about a "ChannelMaster"
or
other fool messing around with a High Power radio and got no response,
since they (the locals) were powerless, the suffering continued. Down
here in
Louisiana, the neighborhood "Channelmasters" loved blocking out Cable TV
and causing misery, so the localities here have asked Mr. Tauzin for
help

and here it is. Not perfect but then we don't live in a perfect world.
Abuse by the localities exist for those using their radios in compliance
with
Part 95 and 97. If a community passes legislation on this matter, it
would
behoove the radio hobbyist to stay tuned into locla events and how this
will
play out.

Would you mind explaining yourself? My posts are usually helpful.

I see nice and shiny joints when I solder, not gray, grainy and lumpy.

FYI, I know more about electronics then the last 5 hams from my SSB
club that just got their tickets. I'm not going to learn code. That's
why I don't have a ticket. I won't be classified as a "lowly tech".

Nice to hear some sane words. CW is fine for some, I'm not going to
learn it. Until the ITU lifts the code restriction, many technical
folks will bypass ham radio. I've been holding a soldering iron for
over 24 years, I've learned a whole lot since then. I won't be branded
a "lowly tech". Still waiting for a 21st century license class...

I have both amateur extra and commercial first class licenses, so I guess I do know the difference. "Allowed to build" is far different from "required to build". It would seem you don't have a basic understanding of the difference.

Everybody who is now on the air with a homebrew rig, at one time was a
non-soldering dork. So what's your point?

OH GOD is right, gung-ho radio cop is the last thing needed. First you
must
make determination about the situation, then try to difuse the local
situation
carefully (without violance or trouble). Only after the the warning do
you
want to take action, hey a few will not believe but then action will be
needed.
Remember, this will be a low key affair. Since the draconian measures
will not be needed at first, please try to limit your glee. As an ex-LEO
I do nto look forward to any bust.

Dear Gentle Readers,
We in the Amateur Radio Service will try to contain N8wwm but you will
have
to help us, please do not encourage him by giving him a whiff of an
illegal
amp, an RCI 2950 or using anything but channels 1-40, these types can be
quite distructive when in full pursuit, something like bull in china

shop.
We do apoligize, but try to help us, these types are in the minority but love the smell of blood.

before his brain (sic) is in gear, wrote:

> www.N8WWMisGreat.com

The URL does not work. The name will COST you $70 for two years.
Then you need to PAY for DNS service to point to your web server
and PAY for a T1 connection, or PAY for virtual name server space
at a provider that will supply the DNS service as part of the
package. You will also need to PAY for a secure server to accept
credit cards. You will have to write the HTML yourself or PAY
someone to do it if it's not included in your web hosting package.

Once you add up the costs involved, you won't bother to put up
the time, money and labor or even have the expertise involved to
put a commercial web site in service.

Put up or shut up.

Would you like to pay me to do it for you? I run several web sites
and provide services to other sites. That's why I'm on here so much.

You can't bullshit me. I could do many nasty electronic things to
you, but you are nothing more then a fly on my windshield....flick!

Well, surprise!

Pc, I HATE the new law and I am a ham as well as a CBer. I run both
completely legally and I think it is a bad law. Without rehashing
what I've posted before, I just think it will cause mistakes, lawsuits,
and innocent people getting hassled by mis-informed cops--even if hams
ARE "exempt" from local enforcement.

Picloud,

This is not an attempt to argue with you. If you refuse an FCC agent's request to inspect your station, you have violated the regulations since said regulations clearly give FCC authority to inspect ANY station under their jurisdiction. CB is under FCC's jurisdiction, therefore they'd cite you for a violation. Believe me, that has been tried before with the result being that they just go get the US Marshall(s) and a warrant and inspect anyway. Actually, to refuse an inspection would likely make things worse for the station op, whether he is a CBer or a ham.

That is it, report the facts and nothing more. That is what the average wanna-be radio hero, ham or cber can't do unless they are trained. Hams have RACES for such emergencies, and to belong to RACES you must attend a training session each year on weather spotting. It teaches you how to recognize the type of weather that produces tornados, how to report weather conditions that the NWS is looking for. Not the typical "wellllll it's really raining here and the wind is blowing" type of crap you get from someone who hasn't been trained. It teaches one how to communicate clearly and to get the message across with a minimum of air time. Again, emergency officials don't want you in the way unless they know you have the skills t

I think all 96 or 102 steel whips are electricaly the same....
however some things to look for is how they are put together.... some
have set screws holding the whip into the base part... they say its for
adjusting swr.... don't believe it... if installed right it won't have
any swr... and the set screws are just a good way to loose a whip..
Hustler makes a real good whip that has the base part sweat fitted to
the whip.
Steel whips have "whip lash".. signal flutter as the whip rocks
around.... a fiberglass whip will overcome this but is limited by
the power it will handle. and in this forest covered country where
I'm at it won't last long...

A properly equipped and trained officer can easily determine the velocity
of your vehicle without having to be a physicist. Similarly, a properly
trained and equipped officer will easily be able to determine the
frequency of your transmission without having to be an electrical
engineer. Thus, hams should encounter no difficulty with this ruling.

As I recall, ham radio was 'doomed' because of incentive
licensing when I got my license in 1970. Then later it got
'doomed' again because of the VE program. Actually, it
seems that ham radio is 'doomed' anytime there is a change
in the rules. This has been going on since the loss of
spark privileges.
Time will tell.

Message-ID: <FOFX5.1316$V6.309702@nntp3.onemain.com>
Source record: 62259

9913 coax (50 Ohms...NOT 500) is VERY susceptible to water penetration if not SEALED properly upon installation. Just the difference in temperatures along the cable length (...in the shade vs in the sun, in the house vs outside) tends to create condensation and draw moisture into the cable... in some commercial installations, the cable is purged with inert gas before sealing.

On or about Sat, 02 Dec 2000 10:33:18 -0500, Handy Andy
<CodysPC@Iserve.Net>, using the forum rec.radio.cb did say:
:"Swings to 20" means it's putting out up to 20 watts as you talk into
:the mike [Carrier plus audio (modulation)] - naturally you're going to
:have to talk pretty loud into the mike to hit that 20 watt figure
:constantly.

So yelling into your mic DOES make your CB work better! ::snicker::

Greetings!

On 07 Dec 2000 12:47:21 GMT, while the modem was pondering it's navel,
icecoldnyc@aol.comICECOLD (COLD as ICE) dissertated the following:

:+> I give the jokes mainly for pleasure since a few years back it got very :+> negative in
here and I decided not to be part of that anymore. I would
:+> like to ask why you are so transfixed on my rectal area? Also are you
:+> saying you dont laugh at my jokes? I am appalled!!!!

Well, don't ever stop posting those jokes. I've found that they are
quite effective in issuing "break for lunch" time-outs. They do give
us all a change, to breathe a little, and chuckle a bit, while
browsing around the posts to answer a question or two.

It breaks up the monotony.

If they don't like them, and I see very few negative posts about the
jokes [prof's is the only one I know of.] I don't think the claim
being made by Brian can be substantiated. If He's speaking of himself,
then so be it. It's not the overall consensus of this NG. At least I
enjoy them!

If anyone doesn't like the jokes, you can't escape the fact that
they're posted all over the place on different N.G.'s. It's not being
forced down anyones throat, either read it, keep it, or delete it.

Keep those jokes coming!

Regards!
:+> Andy <+:

> And how many EXTRA class Hams,can even solder a mic connector ???
>
>

I'll make a reply to that sans anonymity.

I get a chance to meet other hams personally when they need some hardware help, or at hamfests where I tailgate from time to time. It is a toss-up on classification. There are Hams of all classes that don't know which of the iron not to stick in their mouth, what type of coax to use above 50 Mhz, how to put a connector on a piece of cable, how to make a dipole, how to read a schematic, how to draw out a circuit, how to predict a satellite or shuttle pass, why not to look directly into the laser with the remaining good eye, mathematical relationship between wavelength and antenna length, how to check and set swr on a mobile antenna, what swr is..... and the list could go on for days.

Many, if not all of these items are addressed in the various examinations that they had to pass in order to get their license. However, the main focus on their operating ability has been measured using CW as the yardstick.

It soon becomes clear how this yardstick has ended up selling the expansion and continuation of the technical end of ham radio short.

If you get a chance to go to a hamfest, check out how many tailgaters have hombrew items, and talk with them about what does and doesn't sell. Also ask them what anything they are offering does and how it is used in a circuit. Then ask them how often they use CW.

I'll venture a guess that you will find hombrew and non-turn-key vendors to be in the minority, very much aware of the technical end of the hobby, a dying breed and not very concerned about CW. Even though most had to pass the Morse element(s) for their ticket, they would be much more excited about the aspects of a Tech "Lite" building their own accessory items, using a transverter that they hombrewed, building a high gain antenna for use where they can operate, buying special purpose soldering accessories, displaying interest or knowledge on the different types of wire insulation, or coax types.. and any other aspect of the dying technical end of the hobby (or Service as it is supposed to be known as).

I personally have no need for CW. At one time, I wanted to be more active in EME, but I turned to meteor scatter and other esoteric modes to fill that void, modes which used what I knew and had gear for. The non-coded license holder has use of spectrum that numbers in the Hundreds of MHz, tens of GHz; as opposed to the coded and coveted 7 or so Mhz that is locked up by CW.

4 to 8 hour QSOs with every nationality and virtually 1/2 to 3/4 of the earth are possible with QRP power levels via AMSAT Oscar satellites. Repeatability is also a factor; one that can be counted on. There are few random contacts. Using the birds show a prowess in the use of 2 bands simultaneously, understanding and compensating for doppler shift, effect of the horizon on communications, mathematics of prediction of orbiting bodies......

I know how disheartening it is to the CW advocates for some newcomer to make more international contacts, in the rarest of locations and with the most repeatability and reliability; using spectrum that was considered to be line of sight only and thrown to the dogs who couldn't pass muster on Morse requirements.

This goes against the grain of all who support the "get CW and work the world" concept of Ham radio. CW and HF have proven to be invalid as measures of cost and reward among our ranks. That doesn't mean that neither have merit or value; just not in the proportions that merit and value has been associated with them in the past.

It requires far more preparation, operation skill, understanding of propagation, integrity of station integration .... to be able to make weak signal contacts above 50 MHz; something that is possible for anyone entering the ranks through the no-code door.

Maybe this is the view of the future; the most technical minds will revitalize ham radio due to the modernization of the licensing requirements; thus making Ham radio a viable option for generations to come.

One thing for sure, if attrition continues to take its toll, it will just be a mater of time before discussions such as these move from the realm of reality to the realm of philosophy.

Signing Name and Call, then going for the Asbestos Suit

==========

I have a Metrotek Pacer that is in working condition (needs speaker
replaced). Has been airtested.

I am unfamiliar with the Lincoln.

I have a 5 piece Mark II (with the Mark 100 amp) and a Mark IIII 180 amp
that I would consider parting with if someone needed them for their
collection.

Here is a partial listing of my clean-out plans for the new year: I will
take trades on Ham gear in good working condition.

==========

BASE RADIOS: (Tube - Working unless otherwise noted - May need minor repair,
but listed for collector market due to being 23 channel rigs)

Browning MKIII AM/SSB Receiver and AM transmitter $275.00

Robyn T123B $50.00

Courier 23 $50.00

Cobra Cam 88 $65.00

Cobra Cam 88 Mark $75.00

Kris 23+ $50.00

Regency Range Gain $50.00

(2) Lafayette Comstat 25B $75.00 for pair

(2) Tram D201 Inop parts missing from one $200.00 for pair

Metrotek Pacer $50.00

BASE RADIOS: (Rare / Collectable)

Demco Super Satellite Transmitter. Receiver, Speaker with Satellite
modulator. Needs work.
$225.00

Demco Super Satellite Transmitter, Receiver Speaker with internal Modulator - Looks new and works great $400.00

DAK MARK IX AM Hybrid (Channel Selector Switch needs replacing, but will work) $250.00

ARF2001 Scanning Transceiver (Stock) $500.00

ARF2001 Scanning Transceiver (With Factory Freq Counter Option) $650.00

ARF D104 Microphone with dual FET preamp made for use with the 2001 $150.00

Excalibur SSB Base - Works, front panel has labeling missing on some controls 250.00

Base Radios - Solid State

Cobra 135 XLR (Not Working) $75.00

Cobra 2000 with speaker and Cobra Desk Mic. Variable power mod and more $325.00

(2) Cherokee CBS-1000 $150.00 inop/repairable for pair

Johnson 250 50th Anniversary w/stock hand mic $50.00
Johnson 250 50th Anniversary w/stock hand mic $50.00

Midland 13-876 $50.00

Realistic Navaho TRC-30A $40.00
Realistic Navaho TRC-433 w/box, Realistic hand mic $75.00
Realistic Navaho TRC-431 Not working $35.00

Teaberry T-Control w/box and hand mic $50.00

MOBILE RADIOS:

(2) Cobra 29 $35.00 for pair (not working)

(2) Palomar Digicom 100 $150.00 for pair (not working)

(2) Midland 13-857 w/ stock hand mics $40.00

Uniden HR-2600 w/2510 socketed firmware and stock hand mic $150.00 receive problem

MICROPHONES and ACCESSORIES:

Demco Modulator $50.00
Realistic Noise Canceling Power Mic $15.00

Siltronix 90-6 VFO $50.00

MACO VFO $50.00

AMPLIFIERS:

Mako 300 tubes good (8950s) - needs tuned input circuit $200.00

Palomar 300A - no tubes, parts robbed - w/power supply $100.00

Gray 300 mobile $250.00

LDO 100 Base transistor amp with internal power supply $200.00

Why are you clowns blaming ARRL for the "doom" of CW as an amateur mode?

Are you completely unaware that the League is the ONLY ham radio society
that consistently votes AGAINST eliminating the Morse requirement at
international conferences? Do you realize how far out of step the United
States amateur community appears to be to the rest of the world?

Where have you been when part of 220 and just about everything
over 1.8GHz got, or is in the process of getting the chop as I type this?

Ever hear about "Bluetooth" - a new standard to link just about
every consumer product via wireless. GUESS WHAT PAL
IT'S ALREADY DEAD AS FAR AS HAM RADIO IS
CONCERNED.

Better re-read Wayne Green's old editortials, he's right on the bullseye.

>If you are a ham please

Go back to playing CW. Your last comment proves what
a highbrowed asshole you are. I'll laugh a year or two when
your SK and your XYL tosses all your radios out to the
curb in the trash with a hearty "good riddence to this crap".

Noble thought but dead wrong in the implementation. Tests today require
no technical knowledge whatever should that be the route to the license
preferred by the applicant, and why shouldn't it be? The idea that code
free or technical knowledge-free licenses will draw a influx of
technical talent has been soundly
disproved by the history of the past 10 years.

More to the point, when did it change, and how many of those licensed
more recently can't, as a percentage of their total? It's huge, from
what I've seen.

I got my Extra on April 15, 2000, and I've been soldering (including mic
connectors) for 15 years.

Without knowing what the models you are looking at I can tell you some
things to look at. FRS uses 14 different freqs ant i think around 38
different CTCSS tones. Not all radios are capable of all freqs and
tones. The 2 for $80 is probably 2 freqs and maybe a handfull of
tones. Where as the $80 each can do all freqs and a lot more tones.
What this means is that if you turn your radio on and some one is
using the freq that you have tuned in you can just switch to a
different freq. But if you only have access to 2 or so there are less
freqs that you can switch to. The CTCSS tones or so that if you have
two radios set up with the same tone and one keys up the other will
break squelch, however if the tones are different or the transmitter
CTCSS is not set at all the receiving radio will not break squelch.
Some what allows you to have a little break from extra junk on the
freq. But if the receiving radio does not have tone set then it can
receive all communication over that freq.

I hope that this helps.

I take it you haven't taken an Extra written exam lately then?
Wouldn't figuring complex impedances, antenna lengths, etc.
count as technical?
Admittedly, it's not as technical as drawing schematics of plate-modulated
final stages, but the average non-technical fellow is still going
to have to study quite a bit for an Extra exam. These days, with
radios out of the box, the need to be a GROL too is much more limited.

The fundamental tension seems to be between those who wish to keep things
an exclusive club / preserve the past and those who feel that unless
we as a group move towards new technologies and higher frequencies,
we will lose our justification for existance. If the latter is true, and if
we ignore the threat, "they" will probably nibble off our
frequencies over years until we're down to 40 channelized frequencies and maybe
two modes (sound familiar?) So in other words, we become a CB service
if we fail to justify our existence just as much as if we lower standards too
far.

Now, CW is a fine pastime and I can't imagine why someone would
criticize those who enjoy working it, but we need the sort of techical
minds in the hobby who may not be interested enough in CW to otherwise
get in. IMHO, of course. :)

This is rec.radio.cb. HR2346 deals with CB. Therefore my opinion is relevant to the discussion. What's your problem, Bob? You don't seem to like someone expressing views in support of legal CB operation.

>I'm saying you're a
> troll..I don't care about your views.

So anyone who's views you disagree with you is a troll. Yes, I see how it works now.

>Views which, have been repeated
> over and over in the other 10 million threads here and other ham/cb
> boards. Get it now?

I feel my views were quite unique. I contributed observations for discussion. Later I contributed new information in the form of a Congressional Record.

> On top of that troll, when I stopped and asked the local policeman
> if he knew what HR2346 was, he replied "Huh?". Theres nothing to talk
> about now...nobody knows how this is going to play out.

Your local cop's response obviously proves something significant to you. But it's not obvious to anyone else. Help me out here, Bob. Explain.

> Bob the illegal CBer, committing crime against humanity.

If you're proud to be operating illegal CB you'd be better off with some counseling, not prosecution.

Well, Jeff, I never thought I'd see the day when I agree with you on something, but you're right on the money this time. Wayne Green buys into so much stuff, that it's hard to sort out what's legit and what's not, because, at times, he actually is correct.

His latest editorials state that the government is seeding the skies with an anthrax vaccine, because Iraq is planning a biological attack in revenge for our kicking their asses in Desert Storm. The seeding is an effort to minimize casualties without starting a panic. The government, supposedly, can't stop the attack altogether, but they can make an effort to limit the effects.

This is coming from a guy who publishes a "Secret Guide to Wisdom" that says that the sci fi classic "Stranger in a Strange Land" was written by Ray Bradbury.

N8WWM loves you all...happy bust you clowns!

Before the
FEDERAL COMMUNICATIONS COMMISSION
Washington, D.C. 20554

In the Matter of

James R. Farlow
Thomasville, North Carolina

)
)
)
)
)
)
NAL/Acct. 915NF0001

FORFEITURE ORDER

Adopted: March 17, 1999 ; Released: March 19, 1999

By the Director, Legal Services Group,
Compliance & Information Bureau:

1. Before the Compliance and Information Bureau ("the Bureau") is a Notice of Apparent Liability ("NAL") for a monetary forfeiture issued on November 18, 1998 to James R. Farlow and the response thereto filed by Mr. Farlow. The NAL proposed imposition of a forfeiture against Mr. Farlow in the amount of $7,000 pursuant to 47 U.S.C ï¿½ 503(b) and 47 C.F.R. ï¿½ 1.80 for willful violation of 47 U.S.C. ï¿½ 303(n) and 47 C.F.R. ï¿½ 95.426 (CB Rule 26). For the reasons stated below, we affirm the $7,000 forfeiture amount.

BACKGROUND
2. On March 10, 1998, the Bureau's Norfolk, Virginia, Resident Agent Office received a complaint from an individual, in Thomasville, North Carolina, who had been experiencing interference to her home electronic equipment from Mr. Farlow's citizens band ("CB") radio operation. The complaint also contained allegations of use of a linear amplifier by Mr. Farlow in violation of the rules governing CB radio service, 47 C.F.R. ï¿½ï¿½ 95.401 - 95.428. In response to another complaint concerning Mr. Farlow's CB radio operation, on September 8, 1998, an agent from the Norfolk Office went to the Thomasville, North Carolina, area to investigate the complaint.

3. While there, the agent confirmed that the interference was still a problem for Mr. Farlow's neighbors. In order to determine whether Mr. Farlow's CB radio operation was still the source of the interference, the agent decided that an inspection of Mr. Farlow's equipment would be necessary. At 6:30 p.m. the agent knocked on the front door of 103 Browning Drive, the residence of Mr. Farlow. Mr. Farlow came from the back of his house in reply to the agent's knock. The agent properly identified himself as a representative of the FCC, showed Mr. Farlow his official badge, and asked to inspect Mr. Farlow's CB radio station. Mr. Farlow then led the agent to his back door where he hesitated and then asked the agent for a search warrant. The agent explained to Mr. Farlow that both ï¿½ 303(n), and ï¿½ 95.426 (CB Rule 26), authorize inspection of all CB radio stations by the FCC and a search warrant was not necessary. Nevertheless, Mr. Farlow refused to allow the agent entry to his residence in order to inspect the station. After observing a CB radio in the truck parked in the driveway at 103 Browning Drive, Thomasville, North Carolina, the agent also requested that he be allowed access to inspect Mr. Farlow's mobile CB radio station. Mr. Farlow again refused to allow the agent to inspect his CB station. Subsequent to the request for inspection, the Bureau's Norfolk Office issued the subject NAL on November 18, 1998, for the willful violations of ï¿½ 303(n) and ï¿½ 95.426 (CB Rule 26).

4. In responding to the NAL, Mr. Farlow contends that he attempted to resolve the interference complaints of his neighbors although he had doubts that his CB radio station was the source of the interference. Furthermore, Mr. Farlow states that, at the time of the attempted inspection, he no longer had the CB equipment at his residence because of all the complaints from his neighbors. Mr. Farlow's response to the NAL further contends that he was unable to let the agent into his house as his wife was indisposed. Mr. Farlow also claims that the agent did not have a search warrant, and that the agent would not allow him the time to call his attorney. Furthermore, Mr. Farlow asserts that he had recently been threatened by neighbors and felt uncomfortable allowing a "total stranger [who] shows up after business hours in a used faded Explorer without any recognizable law enforcement, no search warrant, no previous paperwork or anything to explain my rights." Finally, Mr. Farlow states that he did not know who the FCC was, nor did he know the rules and regulations associated with operating a CB radio station.

DISCUSSION

5. The Bureau's Norfolk Office issued the forfeiture pursuant to ï¿½ 503 and ï¿½1.80. In assessing the forfeiture amount, the Norfolk Office followed the forfeiture standards established in ï¿½ 503 and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate Guidelines, 12 FCC Rcd 17087 (1997), recon. pending ("Policy Statement"). It is required by ï¿½ 503(b) that the Commission take into account the nature, circumstances, extent and gravity of the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and other such matters as justice may require. See, 47 U.S.C. ï¿½ 503(b)(2)(D).

6. We have reviewed Mr. Farlow's arguments concerning the events of September 8, 1998, and we find that none of them are sufficient to eliminate the

liability associated with the noted violations. We believe that if Mr. Farlow no longer had CB radio equipment in his residence that he should have stated so at the time of the request for inspection. He did not. In fact, a neighbor of Mr. Farlow's had identified Mr. Farlow's voice in a transmission that caused interference to her home electronic equipment only a few days prior to the inspection. Additionally, a neighbor observed Mr. Farlow removing the CB radio equipment from his residence on September 9, 1998, the day after the attempted inspection. Moreover, the FCC agent visually observed that a mobile CB radio station was present in Mr. Farlow's truck on September 8, 1998. Mr. Farlow does not offer an explanation as to why he denied the agent entry to inspect his truck. Mr. Farlow does not offer any mitigating circumstances which would excuse his refusal to allow inspection of his CB radio station. The hour of the attempted inspection, 6:30 p.m., was during daylight hours, and the agent presented legitimate FCC identification credentials, which according to the agent, was acknowledged by Mr. Farlow as being "official."

7. Under ï¿½ 303(n) the FCC has the "authority to inspect all radio installations associated with stations required to be licensed by any Act, or which the Commission by rule has authorized to operate without a license under Section 307(e)(1)." 47 U.S.C. ï¿½ 303(n). This definition expressly includes CB radio stations as those that the FCC is authorized to inspect. Likewise, under ï¿½ 95.426, "[i]f an authorized FCC representative requests to inspect your CB station, you must make your CB station and records available for inspection." 47 C.F.R. ï¿½ 95.426(a). Thus, an FCC agent does not need a search warrant to inspect a radio station. See Norfolk Southern Railway Company, 11 FCC Rcd 519 (CIB 1996) (the right to inspect a station is one of the cornerstones of the FCC's ability to ensure compliance with the Communications Act and the Commission's Rules). Pursuant to 47 C.F.R. ï¿½ 95.402(a)(1), Mr. Farlow, as a CB operator, had the responsibility to be familiar with the CB rules and to comply with these rules. "The Commission expects its licensees (including CB users authorized by CB Rule 4, 47 C.F.R. ï¿½ 95.404, to operate without an individual station authorization) to be familiar with those rules that govern the class of station they operate. Claims of unfamiliarity with rules cannot be used to justify mitigation of penalties." William J. McCray, Jr., 9 FCC Rcd 1897 (FOB 1994). As such, the violations of ï¿½ 303(n) and ï¿½ 95.426 were willful.[1]

8. In sum, we have examined Mr. Farlow's response in conjunction with the Policy Statement and the above statutory factors and conclude that Mr. Farlow has failed to provide a sufficient justification for reducing the forfeiture amount. We therefore affirm the forfeiture amount of $7,000.

9. ACCORDINGLY, IT IS ORDERED that, pursuant to 47 U.S.C. ï¿½ 503(b), 47 C.F.R. ï¿½ 1.80, and the Policy Statement, 12 FCC Rcd 17087, James R. Farlow IS LIABLE FOR A MONETARY FORFEITURE in the amount of $7,000 for willful violation of 47 U.S.C. ï¿½ 303(n) and 47 C.F.R. ï¿½ 95.426 (CB Rule 26).

10. IT IS FURTHER ORDERED that, pursuant to 47 C.F.R. ï¿½1.80(f), James R. Farlow shall, within thirty (30) days of the release of this Forfeiture Order, pay the amount of $7,000. Payment of the forfeiture shall be made in U.S. dollars, by check, credit card or money order drawn on a U.S. financial institution payable to the Federal Communications Commission.[2] The remittance should be marked

NAL/Acct. No. 915NF0001, and mailed to the following address:

Federal Communications Commission
Post Office Box 73482
Chicago, IL 60673-7482

Petitions for reconsideration pursuant to 47 C.F.R. ï¿½ 1.106, or applications for review pursuant to 47 C.F.R. ï¿½ 1.115 should be sent to:

Office of the Secretary
Federal Communications Commission
445 12th Street, S.W.
Washington, D.C. 20554
ATTN: Mail Stop 1500E3-DLH
Compliance and Information Bureau

Forfeiture penalties not paid within 30 days will be referred to the U.S. Attorney for recovery in a civil suit. 47 U.S.C. ï¿½ 504(a).

11. IT IS FURTHER ORDERED that, a copy of this Order shall be sent certified mail, return receipt requested, to James R. Farlow, 103 Browning Drive, Thomasville, North Carolina 27360.

FEDERAL COMMUNICATIONS COMMISSION

Ricardo M. Durham
Director, Legal Services Group
Compliance Division
Compliance and Information Bureau

Footnotes:
1 Section 312(f)(1) of the Communications Act of 1934, as amended, 47 U.S.C. ï¿½ 312(f)(1), which also applies to ï¿½ 503(b), provides: "[t]he term 'willful,' when used with reference to the commission or omission of any act, means the conscious and deliberate commission or omission of such act, irrespective of any intent to violate any provision of this Act or any rule or regulation of the Commission authorized by this Act or by a treaty ratified by the United States." See Southern California Broadcasting Co., 6 FCC Rcd 4387 (1991).

2 Requests for installment plans should be mailed to: Chief, Billings and Collections, Mail Stop 1110A2, 445 12th Street S.W., Washington, D.C. 20554. Payment of the forfeiture in installments may be considered as a separate matter in accordance with 47 C.F.R. ï¿½ 1.1914. Please contact Chief, Billings and Collections for information regarding credit card payments.

ORDER

Adopted: August 18, 2000 Released: August 21, 2000

By the Associate Chief, Wireless Telecommunication Bureau:

I. INTRODUCTION

1. We have before us a petition (Petition) filed by Alan Dixon (Dixon) requesting amendment of Section 95.413 of the Commission's Rules to authorize stations in the Citizens Band (CB) Radio Service to communicate with other CB Radio Service stations more than 250 kilometers (km) (155.3 miles) away, and to communicate with stations in foreign countries. Based on our review of the record, we conclude that issuance of a Notice of Proposed Rule Making and the commencement of a separate proceeding regarding this matter is not warranted. Dixon's request is inconsistent with the purpose of the CB Radio Service and could fundamentally alter the nature of the service. Therefore, we deny Dixon's Petition.
II. BACKGROUND

2. The CB Radio Service is a private, two-way, short-distance voice communications service for personal or business activities of the general public. It allows any individual, other than a representative of a foreign government or a federal government agency, to transmit two-way plain language communications, i.e., communications without codes or coded messages, only to other CB stations, to units of his or her own CB station or to authorized government stations on CB frequencies. These communications may be about a person's personal or business activities or those of members of his or her immediate family living in the same household; emergencies; or traveler assistance information. Communications also may be transmitted concerning civil defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the civil defense agency with authority over the area in which the station is located. The Rules prohibit a CB station from communicating with, or attempting to communicate with, any CB station more than 250 kilometers (155.3 miles) away, and from communicating with stations in other countries, except General Radio Service stations in Canada.

3. On November 3, 1999, Dixon filed a petition for rule making requesting amendment of the CB Radio Service rules to eliminate the prohibition against CB Radio Service stations communicating with other CB Radio Service stations more than 250 km away and to allow CB Radio Service stations to communicate with stations in other countries, subject to any restrictions or exclusions that may be imposed by either the international Radio Regulations (Radio Regulations) or the government of any country subject to the Radio Regulations. Dixon states that CB operators should not be constrained from contacting distant CB stations in order to facilitate communications for personal convenience, navigation, travelers assistance, and emergency and disaster communications. In addition, Dixon states that the propagation characteristics of frequencies allocated to the CB Radio Service are well understood to be capricious and unpredictable, and that a user should not need a technical understanding of radio wave propagation, or a frame of reference limited to an arbitrary geographic radius. He requests amendment of the rules to eliminate restrictions on the distance CB Radio Service stations may communicate, and states that allowing such communications will not substantially alter the primary use of the CB Radio Service as a short-range communications service.

4. The Commission sought comment on Dixon's Petition on January 14, 2000. Comments and

reply comments were received from CB Radio Service operators and organizations representing them, amateur
radio operators and the American Radio Relay League, Inc. (ARRL), and the National Association of
Broadcasters (NAB). CB Radio Service operators generally support the proposed rule amendment. They
state that the present rule is unenforceable, and that communications in excess of 250 km are inadvertent
and beyond the operator's control due to the eleven-year sun spot cycle or other natural phenomena. Jock
Elliott and others state that the phenomenon of communicating beyond 250 km can be avoided only by
relocating the entire CB Radio Service to different spectrum.
5. The ARRL opposes the Petition on the grounds that this proposal seeks to redefine the purpose of the
CB Radio Service by allowing long-distance CB communications, which would undermine the core distinction
between the CB Radio Service and the Amateur Radio Service. Similarly, Collin Dvork (Dvork) states that the
rule should not be revised because the CB Radio Service is not a DX (long-distance) service, and someone
who wants DX should obtain an amateur radio license and use bands that are allocated for it. The NAB also
opposes the Dixon Petition. It states that the restriction in Section 95.413(a)(9) is necessary to deter CB operators
from operating at power levels in excess of those permitted under the Commission's rules, and that consumers
must be protected from illegal CB radio transmissions that interfere with radio, television, telephone, and other
forms of electronic communication.
III. DISCUSSION
6.After consideration of the record, we believe that the requested revisions to the rules are
inconsistent with the purpose of the CB Radio Service. As an initial matter, we agree with the ARRL that
the purpose of the CB Radio Service is to provide for short-distance personal and business
radiocommunications and we note that this purpose has not changed since the service's initial
authorization. We also note that the Commission was aware that the frequency band it authorized for the
CB Radio Service was affected by the eleven-year sunspot cycle and that communications on this band
could be propagated over great distances. Nevertheless, the Commission found that the public interest,
convenience and necessity was served by the allocation of these channels to what was then called the
Citizens Radio Service for short-distance personal and business radiocommunications. We conclude
that the main premise of the Dixon Petition that CB Radio Service

communications over 250 km are
unavoidable due to the propagation characteristics of frequencies allocated to
the CB Radio Service was
previously considered by the Commission, so this characteristic alone is not a
sufficient reason to amend
Section 95.413 of the Commission's Rules.
7.Further, we are concerned that, if Section 95.413 were revised to eliminate
the prohibition
against communications between CB Radio Service stations more than 250 km away,
then the CB Radio
Service would be used by individuals to transmit communications that are
similar to those transmitted by
amateur stations. This result, we believe, would fundamentally change the
nature of the service, in fact, it
would be transformed from a short-distance voice communications service, where
long-distance
communications inadvertently can occur, to an examination-free amateur
radio-type service, in which long-
distance communications would become permissible communications. We note that
the Commission stated
it had no intention of creating a service paralleling the amateur service when
it authorized the Citizens
Radio Service, and it did not intend that CB Radio Service stations be used for
technical radio experiments
or for general contacts of a random nature. In this regard, Dixon and others
state that the CB Radio
Service already is used for long-distance personal convenience communications
and that such use should
be permitted. We also note that some individuals used the Citizens Radio
Service in this manner before
the Commission specifically prohibited CB Radio Service stations from
communicating with distant
stations. Thus, the concern expressed by the ARRL that this proposal would
lessen or eliminate the core
distinction between the CB Radio Service and the Amateur Radio Service is a
valid concern. The Petition
presents no compelling reason to propose a rule change that would undermine the
purpose underlying the CB
Radio Service rules. Rather, we agree with Dvork that someone wishing to
engage in amateur service type
communications should seek an amateur radio license and use bands that are
expressly allocated for these
types of communication.
8.Similarly, in the Authorization Order the Commission considered whether
communications with
foreign stations should be permitted, and decided that Citizens Radio Service
stations should be limited to
exchanging messages with government stations relating to civil defense and
other stations in the Citizens
Radio Service. Communications with FCC-licensed stations in other radio

services and foreign stations
were prohibited. In this regard, we note that the Citizens Radio Service,
unlike the amateur service, is not
a service recognized in the international Radio Regulations, and that allowing
Citizens Radio Service
stations to communicate without regard to the distance between station would
greatly increase the potential
for interference with stations licensed by other countries. We also note that
the internationally permitted
use and allocation applicable to the CB Radio Service frequency band has not
changed since the
Authorization Order was adopted. For these reasons, we conclude that the
proposed revisions to the
rules are inconsistent with the basis and purpose of the CB Radio Service.
9.With regard to NAB's opposition to the Petition on the basis that consumers
must be protected
from illegal transmissions on CB Radio Service channels that cause interference
with other electronic
communications, we agree with Dixon that such transmissions already are
prohibited and that, as NAB
notes, we take enforcement action against violators of the rules. Therefore,
we believe that the concerns
expressed by NAB are addressed in the Commission's Rules. We also note,
moreover, that equipment that
is designed to receive transmissions from broadcast stations, and other
electronic equipment such as
telephone instruments and computer devices, may unintentionally receive the
transmissions of CB stations
that are operated in accordance with the rules. In that the equipment that is
receiving these transmissions
generally is authorized under Part 15 of our Rules on the condition that
interference that may be caused
by the operation of an authorized radio station must be accepted, we agree with
Mr. Ort that the rules
presently address the issue of undesired reception of authorized CB Radio
Service station transmissions by
broadcast receivers.
IV. CONCLUSION
10.Amending the rules to permit long-distance and international communications
would undermine
the purpose of the CB Radio Service rules, and compromise one of the core
distinctions between the CB
Radio Service and the Amateur Radio Service. Therefore, we conclude that the
request in the above-
captioned petition for rule making is unnecessary and does not warrant further
consideration at this time.
11.Alternate formats of this Order (computer diskette, large print, audio
cassette and Braille) are
available to persons with disabilities by contacting Martha Contee at (202)
418-0260, TTY (202) 418-

2555, or by e-mail at <mcontee@fcc.gov>. This Order also is available at the Commission's internet site at <http//www.fcc.gov>.

V. ORDERING CLAUSES

12. Accordingly, IT IS ORDERED, pursuant to Sections 4(i) and (j) and 303(r) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), (j), 303(r), and Section 1.401(e) of the Commission's Rules, 47 C.F.R. 1.401(e), that the petition for rule making filed by Alan Dixon on November 3, 1999, RM-9807, IS HEREBY DENIED WITHOUT PREJUDICE.

13. This action is taken under delegated authority pursuant to Sections 0.131 and 0.331 of the Commission's Rules, 47 C.F.R. 0.131, 0.331.

NEWS
Report No. CI 98-6 COMPLIANCE & INFORMATION ACTION April 27, 1998

FCC INSPECTION PROGRAM REDUCES NUMBER OF NEW YORK CITY TAXI
CABS FOUND OPERATING CB RADIOS ON ILLEGAL CHANNELS

The FCC Compliance and Information Bureau announced today that an
inspection
program of New York City taxicabs has reduced the number of cab drivers
illegally using
CB radios on amateur radio band frequencies.

Following receipt of numerous complaints that New York City taxis were
interfering
with amateur "ham radio" bands, (10 Meter Radio Band), agents from the Bureau's
New
York field office began an investigation in early January, and verified that
cab drivers were
not using CB radios on designated CB channels, but were using amateur radio
frequencies.

In cooperation with the New York City Taxi and Limousine Commission (TLC)
which governs all taxi cabs, FCC investigators began to make periodic, random
inspections
of cab drivers' CB radios at the TLC taxi inspection facility in Woodside, NY,
where all
New York City taxi cabs undergo an inspection once every four months. At first,
FCC
investigators found that nearly every taxi CB radio inspected had been modified
to operate
out of the legal CB band and in the amateur radio band. Verbal warnings were
issued to all
those found to be in violation and a warning letter was sent to their homes.

After 2-3 months of random FCC inspections, evidence of CB frequency
violations
began decreasing dramatically. Current inspections indicate that only one out
of every 10
New York cabs operating CB radios are transmitting on improper channels. The
FCC
reported that amateur radio operators have stated that taxi cab operation
intrusions into the
amateur 10 meter radio band appear to have disappeared.

In addition to the FCC inspections, the TLC conducted a mailout campaign
to all taxi

owners advising them of FCC regulations related to CB operations. During the inspections
the FCC agents explained to each cab driver why they were operating illegally, how they
were interfering with amateur radio users, and what the proper frequency is for legal CB
channel transmissions. Since the beginning of the inspection program, the CB radios in
approximately 100 taxis were checked. TLC rules permit taxi drivers to have CB radios in
their cabs as long as they meet FCC regulations.

Packrat quoted me:
How a nationwide
trucker's strike can end Algore's coup fast

and replied:
>I thought unions were Democrat and urged >their members to vote as such.
>Wouldn't teamsters be a, what's that >word, union.

You're forgetting that much of the trucking industry is not unionized.
"Owner-operators" - yes, the men and women who drive their own tractors who
first popularized CB - are not unionized. Many "company" drivers aren't either
- even though they definitely are "labor."
Truckers have both the most to lose in Algore's coup attempt - because if he
and his global-warming hangups win, diesel will soar to European price levels
(and U.S. truckers are barely making it now, with huge numbers of repod
tractors glutting the market in turn hurting truck makers) - and a lot of
power, because if even 5% of truckers strike, that means manufacturers cannot
count on adequate supplies of key parts (nor can they reliably ship product).
How a nationwide
trucker's strike can end Algore's coup fast

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHHAAH

****
Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
) NAL/Acct. No. 915ST0003
William L. Leavell) Case No. 99ST10
Seattle, Washington 98818)

FORFEITURE ORDER

Adopted: February 8, 2000 Released: February 9, 2000

By the Chief, Enforcement Bureau:

1. This order imposes a forfeiture against William L. Leavell, in the amount of $2,000, pursuant to Section 503(b) of the Communications Act of 1934, as amended ("the Act"), 47 U.S.C. 503(b), and Section 1.80 of the Commission's Rules ("the Rules"), 47 C.F.R. 1.80, for willful violation of Section 303(n) of the Act, 47 U.S.C. 303(n), and Section 95.426 of the Rules, 47 C.F.R. 95.426, regarding refusal to allow an inspection of radio station equipment.

BACKGROUND

2. On November 2, 1998, agents of the Commission's Seattle Field Office investigated complaints that Mr. Leavell's Citizens Band ("CB") radio operations were causing widespread interference to telephones and home electronic devices in the area. Mr. Leavell was not on the air when the agents arrived in the neighborhood, but spoke with the agents when they knocked at the door, identified himself as the CB operator, and admitted to having CB radio equipment on the premises. However, when the agents asked to inspect the CB equipment, Mr. Leavell stated that he was ill and did not want to allow inspection at that time. The agents made arrangements to come back the next morning to inspect the station. On November 3, 1998, the agents found Mr. Leavell's CB equipment to be FCC type-accepted and installed in a correct manner. They informed Mr. Leavell that his station, as inspected on November 3, 1998, was in compliance with the CB rules, but that future complaints of

severe interference would indicate that
he had modified the equipment or added equipment to his station which does not
comply with the FCC's CB rules for
type-accepted devices. The Seattle Field Office subsequently sent Mr. Leavell
a written warning letter, on November
4, 1998, describing the inspection findings and reminding him that operating
with modified equipment or power
amplifiers in the CB band would invalidate his operating authority for the CB
radio. The letter also stated that
operating non-FCC Type-Accepted CB equipment would be considered unlicensed
operation in violation of Section
301 of the Act, and could subject him to penalties under Sections 501, 503
and/or 510 of the Act.

3. On December 17, 1998, agents from the Seattle Field Office conducted
another investigation of Mr.
Leavell's CB operations, in response to additional complaints from Mr.
Leavell's neighbors. Based on their
knowledge of CB radio systems, their engineering experience, and the power of
the CB radio signal as received on
the equipment in the agents' vehicle, the agents determined that the field
strength of the signal transmitting from Mr.
Leavell's station exceeded the expected level for an FCC Type-Accepted four
watt CB transmitter. When questioned,
Mr. Leavell admitted that he had been operating the CB radio at the time the
agents were monitoring, but he refused
to allow the agents to inspect his transmitting system. Even upon being
informed that refusal to allow an inspection
of his CB equipment was punishable by fine, Mr. Leavell refused to allow the
inspection as requested. On March
4, 1999, the Seattle Field Office issued a Notice of Apparent Liability ("NAL")
in the amount of $11,000,
citing Mr. Leavell for operating a CB radio with excessive power and refusal to
allow an inspection.

4. In his written response to the NAL, Mr. Leavell denies that he
operated his CB radio with
greater power than allowed by the Rules, and contends that he did not deny
permission to inspect his equipment
because the Rules do not require CB operators to provide immediate availability
of the equipment. He further
claims that the Commission is in violation of Federal law and proper procedure
because: (1) he received no
citation of the violation prior to imposition of the forfeiture; (2) he wasn't
granted a personal interview with
the Commission to discuss the violation; (3) he was denied a fact-finding
hearing before the Commission or
an administrative law judge; and (4) any forfeiture penalty issued against him
cannot exceed $10,000.

DISCUSSION

5. By operating a CB radio station, Mr. Leavell is responsible for knowledge of, and compliance with, the applicable sections of the Rules. See 47 C.F.R. 95.402. As noted in the NAL, section 95.426 of the Rules requires a CB radio operator to make his/her CB station and the station's records available for inspection by an authorized FCC representative. 47 C.F.R. 95.426; see also 47 U.S.C. 303(n). The right to inspect a station is one of the cornerstones of the Commission's ability to ensure compliance with the Act and the Rules. See Norfolk Southern Railway Company, 11 FCC Rcd 519 (1996). A refusal to allow or a significant delay in inspection can often shelter egregious violations and is thus can frustrate enforcement efforts. Id. Hence, the FCC is not required to inspect by appointment. Mr. Leavell refused to allow properly identified FCC agents to inspect his radio station when requested, in violation of both the Act and the Rules. His refusal to allow the inspection effectively prevented the Commission from verifying his claim that he was not operating above the power limits established in the Rules when the agents detected non-compliant, higher signal levels on December 17, 1998.

6. Although we reject the procedural arguments raised by Mr. Leavell as noted below, under all the circumstances here, we believe it is appropriate to lower the amount of this forfeiture to $2,000. With regard to the procedural claims, we note that Section 503(b)(5) of the Act, 47 U.S.C. 503(b)(5), provides that a warning must be given initially to a party who is not a licensee unless the party is engaged in activities for which a license or some form of Commission authorization is required. Although CB operators are not required to have individual licenses, they operate under the authority granted by section 95.404 of the Rules, 47 C.F.R. 95.404. Because Mr. Leavell operates under section 95.404, which is effectively a blanket license to CB operators, the Commission was not required to send him a citation prior to assessing a forfeiture, or to grant him an opportunity for a personal interview. Similarly, Mr. Leavell is not entitled to a "fact-finding hearing" as a matter of right, because section 503(b)(3)(A) of the Act explicitly states that such hearings may be held at the discretion of the Commission. 47 U.S.C. 503(b)(3)(A). We also note that the Commission has authority to impose forfeitures of up to $11,000 per day, per violation. Nonetheless, we do recognize that Mr. Leavell may have misunderstood his obligations to allow inspection. Taking into account all the factors required under 47 U.S.C. 503(b)(2)(D), we find that the proposed forfeiture should be reduced to $2,000.

ORDERING CLAUSES

7. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 503(b) of the Act, and Section 1.80 of the Rules, 47 C.F.R. 1.80, William L. Leavell IS LIABLE FOR A MONETARY FORFEITURE in the amount of $2,000 for violation of Section 303(n) of the Act and Section 95.426 of the Rules.

8. IT IS FURTHER ORDERED that, pursuant to Section 1.80(f) of the Rules, William L. Leavell shall, within thirty (30) days of the release of this Forfeiture Order, pay the full amount of the forfeiture. Forfeitures shall be paid by check, credit card, or money order payable to the Federal Communications Commission. The remittance should be marked "NAL/Acct. No. 915ST0003" and mailed to the following address:

Federal Communications Commission
Post Office Box 73482
Chicago, IL 60673-7482

Petitions for reconsideration pursuant to Section 1.106 of the Rules, 47 C.F.R. 1.106, or applications for review pursuant to Section 1.115 of the Rules, 47 C.F.R. 1.115, should be sent to:

Office of the Secretary
Federal Communications Commission
445 12th Street, S.W.
Washington, D.C. 20554
ATTN: Technical & Public Safety Division
Enforcement Bureau

Forfeiture penalties not paid within 30 days will be referred to the U.S. Attorney for recovery in a civil suit. See 47 U.S.C. 504(a).

9. IT IS FURTHER ORDERED that a copy of this Order shall be sent certified mail, return receipt requested, to William L. Leavell, in care of his counsel of record.

of
> Apparent Liability ("NAL") for a monetary forfeiture issued on November
18,
> 1998 to James R. Farlow and the response thereto filed by Mr. Farlow. The
NAL
> proposed imposition of a forfeiture against Mr. Farlow in the amount of
$7,000
> pursuant to 47 U.S.C § 503(b) and 47 C.F.R. § 1.80 for willful violation
of 47
> U.S.C. § 303(n) and 47 C.F.R. § 95.426 (CB Rule 26). For the reasons
stated
> below, we affirm the $7,000 forfeiture amount.
>
>
>
> BACKGROUND
> 2. On March 10, 1998, the Bureau's Norfolk, Virginia, Resident Agent
Office
> received a complaint from an individual, in Thomasville, North Carolina,
who
> had been experiencing interference to her home electronic equipment from
Mr.
> Farlow's citizens band ("CB") radio operation. The complaint also
contained
> allegations of use of a linear amplifier by Mr. Farlow in violation of the
> rules governing CB radio service, 47 C.F.R. §§ 95.401 - 95.428. In
response to
> another complaint concerning Mr. Farlow's CB radio operation, on September
8,
> 1998, an agent from the Norfolk Office went to the Thomasville, North
Carolina,
> area to investigate the complaint.
>
>
> 3. While there, the agent confirmed that the interference was still a
problem
> for Mr. Farlow's neighbors. In order to determine whether Mr. Farlow's CB
radio
> operation was still the source of the interference, the agent decided that
an
> inspection of Mr. Farlow's equipment would be necessary. At 6:30 p.m. the
agent
> knocked on the front door of 103 Browning Drive, the residence of Mr.
Farlow.

> Mr. Farlow came from the back of his house in reply to the agent's knock. The
> agent properly identified himself as a representative of the FCC, showed Mr.
> Farlow his official badge, and asked to inspect Mr. Farlow's CB radio station.
> Mr. Farlow then led the agent to his back door where he hesitated and then
> asked the agent for a search warrant. The agent explained to Mr. Farlow that
> both § 303(n), and § 95.426 (CB Rule 26), authorize inspection of all CB radio
> stations by the FCC and a search warrant was not necessary. Nevertheless, Mr.
> Farlow refused to allow the agent entry to his residence in order to inspect
> the station. After observing a CB radio in the truck parked in the driveway at
> 103 Browning Drive, Thomasville, North Carolina, the agent also requested that
> he be allowed access to inspect Mr. Farlow's mobile CB radio station. Mr.
> Farlow again refused to allow the agent to inspect his CB station. Subsequent
> to the request for inspection, the Bureau's Norfolk Office issued the subject
> NAL on November 18, 1998, for the willful violations of § 303(n) and § 95.426
> (CB Rule 26).
>
>
> 4. In responding to the NAL, Mr. Farlow contends that he attempted to resolve
> the interference complaints of his neighbors although he had doubts that his CB
> radio station was the source of the interference. Furthermore, Mr. Farlow
> states that, at the time of the attempted inspection, he no longer had the CB
> equipment at his residence because of all the complaints from his neighbors.
> Mr. Farlow's response to the NAL further contends that he was unable to let the
> agent into his house as his wife was indisposed. Mr. Farlow also claims that
> the agent did not have a search warrant, and that the agent would not allow him
> the time to call his attorney. Furthermore, Mr. Farlow asserts that he had
> recently been threatened by neighbors and felt uncomfortable allowing a "total
> stranger [who] shows up after business hours in a used faded Explorer without

> any recognizable law enforcement, no search warrant, no previous paperwork
or
> anything to explain my rights." Finally, Mr. Farlow states that he did not
know
> who the FCC was, nor did he know the rules and regulations associated with
> operating a CB radio station.
>
>
>
> DISCUSSION
>
> 5. The Bureau's Norfolk Office issued the forfeiture pursuant to § 503 and
> §1.80. In assessing the forfeiture amount, the Norfolk Office followed the
> forfeiture standards established in § 503 and The Commission's Forfeiture
> Policy Statement and Amendment of Section 1.80 of the Rules to Incorporate
> Guidelines, 12 FCC Rcd 17087 (1997), recon. pending ("Policy Statement").
It is
> required by § 503(b) that the Commission take into account the nature,
> circumstances, extent and gravity of the violation and, with respect to
the
> violator, the degree of culpability, any history of prior offenses,
ability to
> pay, and other such matters as justice may require. See, 47 U.S.C. §
> 503(b)(2)(D).
>
>
> 6. We have reviewed Mr. Farlow's arguments concerning the events of
September
> 8, 1998, and we find that none of them are sufficient to eliminate the
> liability associated with the noted violations. We believe that if Mr.
Farlow
> no longer had CB radio equipment in his residence that he should have
stated so
> at the time of the request for inspection. He did not. In fact, a neighbor
of
> Mr. Farlow's had identified Mr. Farlow's voice in a transmission that
caused
> interference to her home electronic equipment only a few days prior to the
> inspection. Additionally, a neighbor observed Mr. Farlow removing the CB
radio
> equipment from his residence on September 9, 1998, the day after the
attempted
> inspection. Moreover, the FCC agent visually observed that a mobile CB
radio
> station was present in Mr. Farlow's truck on September 8, 1998. Mr. Farlow
does
> not offer an explanation as to why he denied the agent entry to inspect
his
> truck. Mr. Farlow does not offer any mitigating circumstances which would

> excuse his refusal to allow inspection of his CB radio station. The hour
of the
> attempted inspection, 6:30 p.m., was during daylight hours, and the agent
> presented legitimate FCC identification credentials, which according to
the
> agent, was acknowledged by Mr. Farlow as being "official."
>
>
> 7. Under § 303(n) the FCC has the "authority to inspect all radio
installations
> associated with stations required to be licensed by any Act, or which the
> Commission by rule has authorized to operate without a license under
Section
> 307(e)(1)." 47 U.S.C. § 303(n). This definition expressly includes CB
radio
> stations as those that the FCC is authorized to inspect. Likewise, under §
> 95.426, "[i]f an authorized FCC representative requests to inspect your CB
> station, you must make your CB station and records available for
inspection."
> 47 C.F.R. § 95.426(a). Thus, an FCC agent does not need a search warrant
to
> inspect a radio station. See Norfolk Southern Railway Company, 11 FCC Rcd
519
> (CIB 1996) (the right to inspect a station is one of the cornerstones of
the
> FCC's ability to ensure compliance with the Communications Act and the
> Commission's Rules). Pursuant to 47 C.F.R. § 95.402(a)(1), Mr. Farlow, as
a CB
> operator, had the responsibility to be familiar with the CB rules and to
comply
> with these rules. "The Commission expects its licensees (including CB
users
> authorized by CB Rule 4, 47 C.F.R. § 95.404, to operate without an
individual
> station authorization) to be familiar with those rules that govern the
class of
> station they operate. Claims of unfamiliarity with rules cannot be used to
> justify mitigation of penalties." William J. McCray, Jr., 9 FCC Rcd 1897
(FOB
> 1994). As such, the violations of § 303(n) and § 95.426 were willful.[1]
>
>
> 8. In sum, we have examined Mr. Farlow's response in conjunction with the
> Policy Statement and the above statutory factors and conclude that Mr.
Farlow
> has failed to provide a sufficient justification for reducing the
forfeiture
> amount. We therefore affirm the forfeiture amount of $7,000.
>

I don't use a linear or otherwise operate illegally - but I will (try to)
educate you on how Washington works in reality.
Why did the FCC give up on the longtime legal requirement that CBers use
official callsigns in every conversation? Was it because of some pressing
demand from the general public - as opposed to CBers? NO - it was simply
because about all CBers suddenly stopped using them at once. You don't have to
be black, female, and named Rosa Parks to do "civil disobedience."
Same with the 55mph federal speed limit; it finally was rescinded - not due
to lots of people writing their congresscritters, but due to near-universal
nonobservance.

Another good HAW HAW
****
Before the
Federal Communications Commission
Washington, D.C. 20554

In the Matter of)
)

Cellular Systems Northwest, Inc.
) NAL/Acct. No. 815ST0001
Enumclaw, Washington)
)

FORFEITURE ORDER

Adopted: March 9, 1999 Released: March 15, 1999

By the Director, Legal Services Group,
Compliance and Information Bureau:

1. Before the Compliance and Information Bureau ("the Bureau") is a
Notice of Apparent
Liability ("NAL") for monetary forfeiture issued on June 19, 1998 to Cellular
Systems Northwest, Inc.
("CSNW"), and the July 3, 1998 response thereto filed by CSNW. The NAL
proposed imposition of a
forfeiture in the amount of $7,000 pursuant to Section 503(b) of the
Communications Act of 1934, as amended
("the Act"), 47 U.S.C. 503(b), and Section 1.80 of the Commission's Rules
("the Rules"), 47 C.F.R. 1.80,
for willful and repeated violations of Section 302 of the Act, 47 U.S.C. 302,
and Sections 2.803 and 2.815
of the Rules, 47 C.F.R. 2.803 and 2.815. For the reasons stated below, we
affirm the $7,000 forfeiture
amount.

BACKGROUND

2. CSNW is a consumer electronics retailer located in Enumclaw,
Washington. On July 9, 1997
and March 19, 1998, CSNW offered to sell and sold linear amplifiers for use
with a Citizen's Band ("CB")
radio to two different FCC agents from the Bureau's Seattle, Washington Field
Office who were posing as
members of the general public. The agents specifically asked about devices for
use with a CB radio, i.e., within

the CB frequency band, which ranges from 26.965 MHz to 27.405 MHz. The offer for sale and the sale by
CSNW violated Section 302 of the Act and Sections 2.803 and 2.815 of the Rules. As a result of these
violations, the District Director of the Bureau's Seattle Field Office issued the subject NAL for $7,000 on June
19, 1998 to CSNW.

DISCUSSION

3. The Bureau's Seattle Office issued the forfeiture pursuant to Section 503 of the Act and
Section 1.80 of the Rules. The base forfeiture amount for this type of violation is $7,000. In assessing the
forfeiture amount, the Seattle Office, following the forfeiture standards established in Section 503 of the Act
and The Commission's Forfeiture Policy Statement and Amendment of Section 1.80 of the Rules to
Incorporate Guidelines, 12 FCC Rcd 17087 (1997) ("Policy Statement"), recon. pending concluded that a
monetary forfeiture in the amount of $7,000 would be warranted. In reviewing the response to the NAL,
Section 503(b) of the Act requires that we take into account the nature, circumstances, extent and gravity of
the violation and, with respect to the violator, the degree of culpability, any history of prior offenses, ability
to pay, and other such matters as justice may require. See 47 U.S.C. 503(b)(2)(D).

4. CSNW's response to the NAL, dated July 3, 1998, was received by the Bureau on July 7,
1998. The response requested that the forfeiture be waived, claiming that CSNW never intended to offer or
recommend amplifiers for CB use and that it was explained to the FCC agents that use of amplifiers on CB
radios was illegal. CSNW contends that if the transactions at issue were in violation of the Act, such violation
was not intentional.

5. As a company that sells CB radio equipment and accessories, CSNW must comply with the
sections of the Act and the Rules that relate to the marketing of radio frequency devices. 47 U.S.C. 302;
47 C.F.R. 2.1 et seq. Section 2.815 of the Rules prohibits the sale or offer for sale of any external radio
frequency power amplifier or amplifier kit capable of operation on any frequency or frequencies between 24
MHz and 35 MHz, which includes the CB frequency band (26.965 MHz to 27.405 MHz). Upon specific
requests from two different FCC agents on two separate occasions, CSNW employees offered to sell (and on

one occasion sold) amplifiers which could be used with CB radios, in violation of Section 2.815 of the Rules.
Section 302 of the Act and Section 2.803 of the Rules prohibit the marketing, including the sale and offer for
sale, of radio frequency devices that do not comport with the Act or Rules. These violations were therefore
willful under the Act because they were not caused by accident or mistake. Thus, pursuant to
Section 312(f)(1) of the Act, whether CSNW intended to violate the rules is irrelevant to this matter.

6. Finally, in its response, CSNW states that it is a "small town retailer," and that it has ceased
selling amplification devices for any communications since receiving the NAL. Remedial action to correct a
violation, while commendable, will not nullify a forfeiture penalty. See generally KGVL, Inc., 42 FCC 2d 258,
259 (1973) (subsequent corrective action will not excuse past violations). Furthermore, to the extent the
reference to its status as a "small town retailer" was meant to demonstrate that the fine assessed will impose
a financial hardship on CSNW, we note that CSNW had ample opportunity to submit financial statements
prepared under generally acceptable accounting procedures for the most recent three year period in support of
any claim of inability to pay, as outlined in footnote two of the NAL. See Ellwood Beach Broadcasting, Ltd.,
8 FCC Rcd 453, 454 (1993) (respondent's failure to submit any financial documents or other evidence deemed
insufficient showing of inability to pay); Liability of Macau Traders, Inc., 13 FCC Rcd 228, 233 (MMB
1998) (no reduction of forfeiture warranted due to undue financial hardship where violator provided no
documentary evidence upon which to evaluate its financial condition or ability to pay). In the absence of any
such evidence, and of any other mitigating evidence, we decline to reduce the amount of the forfeiture. We
therefore find that $7,000 is the appropriate amount for the noted violations.

ORDERING CLAUSES

7. ACCORDINGLY, IT IS ORDERED that, pursuant to Section 503(b) of the Act, 47 U.S.C.
503(b), and Section 1.80 of the Rules, 47 C.F.R. 1.80, Cellular Systems Northwest, Inc. IS LIABLE FOR
A MONETARY FORFEITURE in the amount of $7000 for violation of Section 302 of the Act, 47 U.S.C.
302, and Sections 2.803 and 2.815 of the Rules, 47 C.F.R. 2.803 and 2.815.

8. IT IS FURTHER ORDERED that, pursuant to Section 1.80(f) of the Rules, 47 C.F.R.

1.80(f), Cellular Systems Northwest, Inc. shall, within thirty (30) days of the release of this Forfeiture Order, pay the full amount of the forfeiture. Payment of the forfeiture shall be made in U.S. dollars by check, credit card or money order drawn on a U.S. financial institution, with the appropriate documentation, made payable to the Federal Communications Commission. The remittance should be marked "NAL/Acct. No. 815ST0001" and mailed to the following address:

Federal Communications Commission
Post Office Box 73482
Chicago, IL 60673-7482

Petitions for reconsideration pursuant to Section 1.106 of the Rules, 47 C.F.R. 1.106, or applications for review pursuant to Section 1.115 of the Rules, 47 C.F.R. 1.115, should be sent to:

Office of the Secretary
Federal Communications Commission
445 12th Street, S.W.
Washington, D.C. 20554
ATTN: Mail Stop 1500E3-DLH
Compliance and Information Bureau

9. IT IS FURTHER ORDERED that a copy of this Order shall be sent certified mail, return-receipt requested, to Cellular Systems Northwest, Inc. and its President, Gregory A. Thomson, at 1502 Cole Street, Enumclaw, WA 98022.

Here are a couple more tidbits from fcc website

HIGH PROFILE FIELD ACTIVITIES

INTERFERENCE TO SENATE HEARING:
During the Senate Communications Deregulation Hearing of March 21, 1995, in Washington,
D.C., participants heard a loud, disruptive blast of interference on the public address system.
The meeting proceeded but the Senate requested the FCC to assist in resolving the problem.
Engineers from the Baltimore and Laurel Offices visited the area and conducted tests with Senate
personnel and verified that the problem could be duplicated using nearby CB radio transceivers.
They also found that a CB transmitter operated by a taxi outside the Senate building could be
heard through the audio system. To solve the problem, the engineers installed several filtering
devices at the microphone inputs to the main audio mixer.

UNCLAIMED MAIL TRIGGERS INSPECTION:
The Atlanta, GA, Office received several complaints of interference to home electronic
entertainment equipment in the Gaston, SC, area. The FCC staff sent a warning letter to the
CB radio operator who the neighbors had identified as causing interference. The staff hoped
to pressure the CBer to stop using illegal overpowered equipment if indeed he had some.
Because the FCC's warning letter was returned unclaimed, FCC agents from the CIB Powder
Springs Office made an inspection and uncovered illegal high powered equipment. The CBer
surrendered the equipment to the FCC staff.

Furthermore I feel that eBay did the right thing in banning auctions for illegal cb amplifiers. A step further might be a more restrictive ban on the so-called "export" radios that are designed for CB operation and are responsible for 100% of the trucker incursions into the 10 meter amateur frequencies.

LOBBYISTS. Have you ever heard of them? They - not any public consensus -
are how federal legislation gets passed (or not passed).
Don't you get it? Congress routinely passes thousand-page bills very
few - if any - congresscritters even read before voting on. Bills are commonly
drafted by lobbyists. Forget your junior-high civics class.
The fact that nobody thought much before passing HR 2346 is easily shown by
the simple question of whether or not local police have the technical
wherewithal to tell whether the reason Ms. Smith's stereo is playing her
neighbor's CB instead of music is the fault of her stereo having inadequate
shielding and filtering - or of him having a linear.

This is exactly the kind of puzzling (to me) attitude I am talking about. Why is it that if I express an opinion that supports legal CB I am called a "troll"?

Last time I checked, the name of this group was "rec.radio.cb", not "rec.radio.illegal".

N8WWMisGreat.com announces a superb value...

SPECIAL BONUS...Get ALL of 1mangang's best posts included in a pamphlet if you order this smash hit book now...supplies are limited...this book is going fast...all the hams in America have already ordered or are about to order...As an added bonus 1mangang has agreed to pose at his DX station. He is proud of his Radio Shack 3 channel hand held and 1 pill amp, and wants you to see it all.
If you order in the next 20 minutes you will ALSO get a photo of 1mangang massaging his balls in jealousy during the tripped out trio's wedding!

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have, with adult supervision, drooled into a dictaphone the following masterpiece of authorship and it is now available at your local book store...Don't miss "Muskrat Love", the heartwarming story of 3 illegal CB'ers who find love and marriage through uniting in hatred for N8WWM, the mean 'ole hammie they wish they were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and into 10 meters, listen to the 3 sweet little CB'ers plot, plan and generally scheme to out flame the greatest flamer of all time. Read about their use of electronic components as aids to their sagging libido's. Learn why no female relatives ever come to visit. Look at the special 13 page photo insert that shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife", by Bill Clinton, and will become recognized as a major literary accomplishment. The trippin' trio have outdone themselves this time, and you have just gotta read it to believe it. Only 29.95 now at your local bookseller or order online at

I am sorry, GLC, you are entirely wrong. What's more, you have no facts
to support your argument, only anti-law enforcement bitterness and vague
conspiracy theories.

Here are the facts.

HR2346, or bills like it, have been under consideration by various
branches of the legislature since 1997. A bill that required three years
of study, refinement and debate can hardly be termed something "nobody
thought much about".

Below is an excerpt from the Congressional Record available at
http://eon.law.harvard.edu/openlaw/DVD/dmca/cr12my98s.txt

I urge you to go to the URL and read all of it. It clearly indicates
that public outcry motivated this legislation, not "lobbyists", as you
suggest.

Sincerely,
Aaron Voobner

****
[Congressional Record: May 12, 1998 (Senate)]
The Senator from Arizona [Mr. McCAIN], for Mr. Feingold,
proposes an amendment numbered 2390.
[[Page S4692]]

For the past 3 years, I have worked with constituents who have been bothered by persistent interference of nearby CB radio transmissions in some cases caused by unlawful use of radio equipment. In each case, the constituents have sought my help in securing an FCC investigation of the complaint.

Let me give an example of the kind of frustrations people have experienced in attempting to deal with these problems. Shannon Ladwig, a resident of Beloit, WI has been fighting to end CB interference with her home electronic equipment that has been plaguing her family for over a year. Shannon worked within the existing system, asking for an FCC investigation, installing filtering equipment on her telephone,attempting to work with the neighbor causing the interference, and soon. Nothing has been effective.

Here are some of the annoyances Shannon has experienced. Her answering machine picks up calls for which there is no audible ring, and at times records ghost messages. Often, she cannot get a dial tone when she or her family members wish to place an outgoing call. During telephone conversations, the content of the nearby CB transmission can frequently be heard and on occasion, her phone conversations are inexplicably cut off. Ms. Ladwig's TV transmits audio from the CB transmission rather than the television program her family is watching. Shannon never knows if the TV program she taped with her VCR will actually record the intended program or whether it will contain profanity from a nearby CB radio conversation.

Shannon did everything she could to solve the problem and a year later she still feels like a prisoner in her home, unable to escape the broadcasting whims of a CB operator using illegal equipment with impunity.

I used to hold a Radiotelephone First Class Operators License (it's
still here somewhere in a drawer). In order to exercise the privileges
that license conferred, when working on commercial radio station
equipment, I darn sure had to know how to solder. As I remember it, a
ham radio license was almost the same. Of course that was then, this is
now and it is all somehow different.

Do you have any idea how many thousand-page-plus each bills Congress passes
yearly?
Do you think most congresscritters actually read - much less study - that
much stuff? As a lawyer, I can tell you that the existing federal statutes
require a whole floor-to-ceiling set of bookshelves for - and that's just for
statutes, not regulations.

May I suggest you get your ham license and find another band?

Every 11 years the sunspot cycle makes it rough. I rarely turn
it on during the day. When I do, I get on sideband, say hello
around the country for 15 to 20 minutes, and then turn it off
until the sun goes down. Ain't no use in complaining. If you
can't stand the heat, get out of the kitchen.

If truckers would stop driving for just 3 days
and I mean EVERY driver. it would take the US 3 weeks to catch up.
Everything in this country depends on trucks, the clothing we wear, the
food we eat. Sure the railroad still exists, but do you see a rail line
going up to the back door of your local Wal-Mart or your local Grocery
Store? No, in fact industry in this country is so tight now they have
all gone to JIT or Just In Time, no more backup inventory it costs money
so they use rucks as roving warehouses.

The only problem wih all this is..... you can't get 2 truck drivers to
agree on what day it is let alone when or if they should strike

Yo' aaron, I don't mind discussing legal cb, but theres only so far you can go with it. What I don't like is when folks attempt to RAM the legal issues down our throat, which I am quite certain you have the good sense not to do!

Ah yes, the miscreants, it's ALL their fault on why you can't use your radio. Wouldn't have ANYTHING to do with the high sunspot activity, correct? I mean, since you can talk across country during the day barefoot, but you can't talk across town, those awful radio ops in your receive from DX land just absolutely have to be running illegal power, right so far? And therefore, since only DX is coming into your radio, and it's (gasp) illegal and a (shudder) criminal activity to talk to said DX, you are unable to use your radio? Is that the gist of your point? Damn, and I thought there were much more important things to worry about in life.

Don't be misled by the technical complexity that appears to be present
on the tests. It is an illusion.
If it was actually a test, instead of a spoonfed memory exercise where
ALL the questions with ALL their *exact* answers were prepublished
-*together*-, mind you- then you'd have a point. As it is, all anyone
has to do is download the question pool, which has with each question a
set of possible answers with the correct answer noted. All one needs do
is immediately discard all incorrect distractors and study the questions
with the remaining correct answer as pairs, read each set of questions
through several times, and go take the exam. The correct answers just
jump out at you-they are the familiar ones, the only ones you've seen
before, and the others are not. It's a no-brainer and unless you are a
memoryless dolt, you can't miss. Do it three times and you now have the
Extra class license, quite without acquiring any knowledge whatever, or
as near that as possible.
No, I haven't taken an Extra class exam since shortly after Incentive
Licensing came in in '68. What I *did* do is administer them for 8 years

as a VE team leader.

> Admittedly, it's not as technical as drawing schematics of plate-modulated
> final stages, but the average non-technical fellow is still going

> radios out of the box, the need to be a GROL too is much more limited.

Somebody gotta know something about what all of us are doing scattering
all that RF around. Can you imagine a longterm Amateur Radio Service
surviving, and being supported, where few of its practicioners actually
know anything about what they are doing except operating the gear? You
really believe any FCC would or could continue to support it? Can you
say "history repeats itself" as on 27 mhz?

> The fundamental tension seems to be between those who wish to keep things
> an exclusive club / preserve the past and those who feel that unless
> we as a group move towards new technologies and higher frequencies,
> we will lose our justification for existance.

Someboduy here on the net keeps saying "Those who forget the past
forfeit the future". Nowhere do I see that exhibited more clearly than
in ham radio. No one has ever suggested that time stop or progress be
stimied. Nothing in all that suggests we should simply abandon
everything not of todays design.

If the latter is true, and if
> we ignore the threat, "they" will probably nibble off our
> frequencies over years until we're down to 40 channelized frequencies and maybe
> two modes (sound familiar?)

So why do you think "they" won' get whatever part of "out" spectrum
that is needed for the public good and commercial develop[ment anyway???
History tells us that is how it has been and will be in the future. Hams
got kicked to "200 Meters and Down" sinply because we were the way of
commercial development. Not that long ago we had access to ALL spectrum
above VHF. Look at what has happened up there in more recent years.
Nothing has changed nor will it. When it is needed, specrum WILL be
taken from ham allocations and probably not replaced. But FCC has been
really generous over the years in allowing USA hams access to parts of
the spectrum not needed or abandoned by commercials, so we probably will
pick up some more, especially in LF and VLF areas. Change is ubiquitous.
This is not a freeze-framed area, it is continually in flux. Anyone who
believes we can "preserve" out spectrum is selfdelusional.

So in other words, we become a CB service
> if we fail to justify our existence just as much as if we lower standards too
> far.
>

Licensing a service loaded with people who really believe that because
they passed some "tests" which tested little except their ability to
make word associations does little or nothing to keep the ARS from
becoming another CB, with an attitude.

> Now, CW is a fine pastime and I can't imagine why someone would
> criticize those who enjoy working it, but we need the sort of techical
> minds in the hobby who may not be interested enough in CW to otherwise
> get in. IMHO, of course. :)

So who said a single word about CW? This discussion is strictly about
the lowered technical requirements, which by all accounts some persons
of influence are working hard to see that they are reduced much further,
in fact all the way to none (W5YI for one).

> from a illegal or legal station there complaints may be heard by a police
> officer . Many of the so called effected devices fall under part 15 they
> must accept undesirable operation. End of Story.

Not really. What you said is mostly true only if after the FCC investigates and finds the design of the Part 15 device is crappy. Now if the Part 15 device is well designed, for example with good filtering etc., then the problem becomes more interesting. In the case of Ham Radio's Part 97 rules the Amateur station "may be" restricted from using the frequencies causing the problem completely, and or operation on those frequencies may be restricted between certain hours in the evening and on the weekend. The case might just be the Part 15 device is so close to the transmitter it will screw up unless it was in a Lead box. So, in the interest of keeping the "peace" the FCC can modify the transmitting station's operation, even if the transmitting station's equipment meets all of the FCC's technical standards!

In the case of a CB operator operating on illegal frequencies, power levels, and modes will end up drawing attention to themselves, and then finally being noticed by the FCC. So just because it is a Part 15 device that is experiencing a problem, with RFI, does not automatically mean that no investigation will take place. So the illegal operator will still have to be looking over their shoulder wondering if, or when that knock on the door will come, and a FCC field engineer wants to inspect your station.

If you take the time to read some of the FCC enforcement postings by N8WWM you will discover that the FCC does not need a warrant to inspect your station at any time, it is in the rules, and applies to everyone, including Hams. One CBer discovered this the hard way when he refused to let the FCC field engineer inside to look at his equipment. He got a $7,000 fine for his refusal. Just think, for a little bit of effort to get a General class Ham license that same $7,000 could have paid for a nice new FT-1000 top-of-the-line Yaesu H.F. rig, full legal limit H.F. amplifier, likely a tower, and H.F. antennas too. Instead it ended up in the FCC's pocket. What a waste of money, paying a fine that could have been so easily avoided if he was interested in working on H.F., particularly DX. And being a "licensed" Ham the RFI complaint likely would have caused him little to no problem with the FCC too.

The intend behind HR2346 is primarily of handling RFI issues caused by CB radio operations being blamed on Ham Radio operators. As most of the posters

on this news group have already guessed the local LEO's will not be pulling people over just because there is a big antenna on the vehicle. On the other hand if one is pulled over for other reasons, and the cop is in a bad mood, you may have your radio equipment checked. If anyone on the road will have a problem I suspect it will be the over-the-road truck drivers. These people have to pull in to weight stations on the highway. You ask these guys and they will tell you all about the "safety" inspections they go through. Now the local cop at the weight station can check the driver's radio equipment too.

What is really being objected to is you guys insisting that the "top rung" be dragged down to the "lowest level rung". If you can't see what that does to the the ARS then further discussion is probably futile. No one is saying that things should not change, now, in the past nor the future. But not all change is for the better, and much change that is made simply to appease the "squeaky wheels" is detrimental, as always. When protesters decide what the changes will be, what makes that automatically a positive thing? Take a look at Dick Mcullom's post on "Wet Firecracker Report" and see just what an "influx" the new regulations have had on total numbers of hams. If that is a precursor, the future doesn't look to bright for your goal of increasisng numbers of hams. I really believe that handing out free licenses on streetcorners would have about the same effect. None. Blame the 'net, that's where everone has gone. Including us.

It seems to me that the FCC sat back and did nothing for a long time before this bill was passed.

I do believe things were better in the old days when "rungs" didn't exist like they do today. IMO there should only be one license class. You should have to prove you know enough to get on the air and not cause QRM around the world. Everything beyond that can be learn-as-you-go.

Unfortunately, a lot of hams like to view their extra class license as some kind of exclusive club they belong to, one which requires hazing of the unwashed masses in order to get in. Again, IMO, this is wrong, and discourages a lot of fine folks who would make good hams given a chance.

And yes, I do have one of those extras. Look it up.

If you plan to only swap for the radio.. then your probably on your own.
If you would like to bid on the radio, Ebay has them all the time, various
models and extras with the stations at auction. If you'd like to take a
look at my siltronix web page, go to:

http://sonic.ucdavis.edu/siltronix

hope that holds some interest for you...

cheers
skipp

Never had my foot my in my mouth, foot is too big. Seriously, N8's did not make up those FCC enforcement proceedings, I found them on the Internet myself some time back. I just wanted to reference those proceedings without having to post them myself. You have to admit that $7,000 is not small change, unless you are rich, and is meant to hurt while sending a signal to other like minded operators that the FCC is not joking around when dealing with rules violations. So if one wants to thumb their nose as the FCC by operating in an illegal fashion, and the fine one may get, is it really worth it in the end? I'm sure somebody is going to say it can't happen to me, just to some other guy, well some day that "other guy" may be you. There are no guarantees with illegal, or pirate, type operations no matter how safe you think you are playing the "game". The really sad part is that some of those here, on this news group, will find their tale of woe sooner or later posted on the Internet, by the FCC, and then may finally understand it really is NOT a "game" as far as the FCC is concerned. I would like to see people clean up their act before that happens, and avoid taking a class at the expensive school of hard knocks. Of course if one chooses not to do so the government needs money.

From: Skipp <skipp@pilot.ucdavis.edu>
Message-ID: <90r4ttisi2@mark.ucdavis.edu>
Source record: 62544

Hi Joe,

Great to see you over here this news group. The antennas with loaded coils like you describ (fire stick's and valors) use the wire to make an electricly longer antenna for the physical size. By nature, a 3/4 or 5/8 wave antenna will have more gain than a 1/4 wave of similar size.

Yes, you should notice a little more gain out of an electricly larger antenna. Another thing to think about it the angle of radiation (the direction in which the majority of the signal leaves the antenna). Different types of antennas have different angles of departure for the majority of the signal. If your talking common ground wave (car to car), one type of antenna might be better than another. If your talking skywave (talking skip or dx operation), there are antenna which work better for that mode too.

Fire Sticks work very well...

cheers

Sat back??? More like was held back. The first ten years that
I was "on the street" (mid-60s to mid-70s) we did a LOT of CB
enforcement....and then a new hierarchy came to Washington and
the field folks' water was cut off and we could not get any
enforcement cases through the pipe.

The real issue, though, is not who will enforce CB or whether
CB enforcement was done at all. The real issue is whether
spectrum management (of which enforcement is an integral part)
is a national activity or a local activity...the very core of
the argument on Federalism versus States Rights.

I cannot see my former colleagues at the appropriate ministries
in foreign countries negotiating agreements with or for that
matter respecting any actions of the Communications Regulatory
Agency of South Podunk Junction.

Such things could be considered "technical" if the person being tested
actually had to do them to pass the test. As Dick points out below,
such is not the case at all.
>
> Don't be misled by the technical complexity that appears to be

present

or
> as near that as possible.

That's been true for almost two decades. The recent changes made the situation worse, because the number of tests and the number of questions have been drastically reduced. Most of what remains is, of necessity, about the regulations and safety.

There are several websites that will let you take a simulated written test. Go to any of them and try one of the simulated tests, and see how many questions you get on complex impedances - or Ohm's Law for DC circuits, for that many. Note also how few really different questions on a given subject exist.

What it boils down to is that a person can be almost totally ignorant of lots of stuff that's "on the test" and still pass. Plus if you fail, just pony up another fee and try again at the same session.

> No, I haven't taken an Extra class exam since shortly after Incentive
> Licensing came in in '68. What I *did* do is administer them for 8
years
> as a VE team leader.

I took the Extra in 1970 - "the old way". Every so often I take a sample test online. In my experience the post-April-15-2000 written tests are easier than the ones that immediately preceded them. There is no comparison to the tests of the '60s and '70s - and those ancient tests weren't very hard, anyway.
>
> > Admittedly, it's not as technical as drawing schematics of plate-

That depends entirely on the person. I never studied for any amateur exam. Didn't need to - had to learn the stuff to get on the air.

> These days, with
> > radios out of the box, the need to be a GROL too is much more limited.

One of the purposes of the amateur radio service is for hams to be technically knowledgeable. The license tests used to support that goal much more than they do today.
>
> Somebody gotta know something about what all of us are doing scattering

Exactly.
>
> > The fundamental tension seems to be between those who wish to keep things
> > an exclusive club

"Exclusive club"? Not at all. Never has been, at least not in the USA. All anyone needed to do was pass the tests and you get a license. No age limit, no quota, and the tests were never that hard. A few years ago, an 8 year old got an Extra.

>/ preserve the past and those who feel that unless
> > we as a group move towards new technologies and higher frequencies,
> > we will lose our justification for existance.

Since 1991, all amateur privileges above 30 MHz have been available to anyone who could pass the Tech written test. In April that test was reduced to just 35 questions.
>

Exactly. Those who want to try out higher frequencies have plenty of room to do so. WITHOUT a code test or multiple written tests.

Yet some folks do - at every opportunity. Why do you think that is?

> but we need the sort of techical
> > minds in the hobby who may not be interested enough in CW to
otherwise
> > get in. IMHO, of course. :)

They don't need to know CW to get a license. Just an HF license.

A decade ago, some folks predicted a technical revolution in ham radio would occur because of the dropping of the code test for the Tech. Didn't happen. Why should anyone think it will happen if all code testing disappears?

I'd put it another way.
"Mid-70s" was just when CB moved from being used by a fistful of
"commercial" users to - suddenly - seemingly being in every car.
At that point, no amount of budget money could keep up with the reality of
CB - for instance, that callsign requirements went simply because so few of the
so many users would use them.
No amount of FCC payroll could change CB from what it was as a result of the
trucker revolts of the mid-70s that popularized it - a very-informal two-way
radio service.

Only DUMMIES or Earth Worshippin' Commies voted for gore, wether truckers
or 4 wheelers!!!
Dave!!!!!!

GLC1173 wrote in message <20001207234925.21294.00003414@ng-fd1.aol.com>...
Packrat quoted me:
How a
nationwide
trucker's strike can end Algore's coup fast

and replied:
>I thought unions were Democrat and urged >their members to vote as such.
>Wouldn't teamsters be a, what's that >word, union.

You're forgetting that much of the trucking industry is not unionized.
"Owner-operators" - yes, the men and women who drive their own tractors
who
first popularized CB - are not unionized. Many "company" drivers aren't
either
- even though they definitely are "labor."
Truckers have both the most to lose in Algore's coup attempt - because if
he
and his global-warming hangups win, diesel will soar to European price
levels
(and U.S. truckers are barely making it now, with huge numbers of repod
tractors glutting the market in turn hurting truck makers) - and a lot of
power, because if even 5% of truckers strike, that means manufacturers
cannot
count on adequate supplies of key parts (nor can they reliably ship
product).

To remove any doubt, the remarks were made with my tongue firmly planted in my cheek. As a confirmed homebrewer I can assure you there are soldering iron burns on both the workbench and the carpet!

My present rig is a modified Heathkit VFO converted to transistor operation feeding an SB10 I assembled for use on a DX100 in the 60's. This drives a pair of 6146's which feed a pair of 4-400's (Both pieces homebrew) when I need a bit of a kick. My receiver is a purchased Collins 75A4 with an outboard DSP homebrew unit.

Yea, I didn't say they were made up. For every isolated token cb bust, I can give you a ratio, currently at about 150 hams busted for every cber. I don't think it's sending much of a signal. After all, the hammies are being popped left and right, even Riley himself said complaints are down, which is why the enforcement log was scaled back to every two weeks. If it's meant to send a signal, the hammies don't know it judging by the actions taken by the feds. I respect your positon, as you are also aware of mine, I don't believe in being a jerk off on the air or off, hammie or no. The busts will go on, after repeated warnings. If one can't get his act together AFTER a warning (in some cases, multiple warnings) hammie, cber, whatever, then the stupidity factor comes into play and my opinion is they should be popped if they are causing harmful, intentional, or malicious interference that may be deemed a safety issue. See, but once again, not every one will suffer. Ever know one of those people that have too much money? Well, I do. We were hauling butt on a wilderness trip and he was driving well over the speed limit. Was it safe? No! Was it stupid on my behalf to ride with him? Maybe. But it was MY choice. I pointed to one of those signs that showed "speeding fines doubled in this area" and the fines were posted, and they weren't cheap. He said, and I quote, "I can afford that", and hammered down. A few busts are all that is gonna come, and only in certain areas. In some areas, like some mentioned, it's going to be a revenue enhancer until the court steps in and caps it. I totally and wholeheartedly agree with you, if one breaks the law, one should be willing to pay the piper, if it comes full circle. If you want to speed, be prepared to pay the fine. Nothing more, nothing less.

>Subject: Re: [FWD] Help! Talk to non-ham on my HT?
>From: "The Packrat"

I can only speak about the British regulations, here if a ham wants to transmit legally on the Business bands known as PMR in the U.K then he must use a type accepted radio and so theoretically he could programme a GP300 to operate on the business band that he is licenced for and have some channels programmed for the ham band that he is also licenced for.

He cant legally use a Ham radio to transmitt on a business band because it is not type accepted however he is allowed to use any radio he wants or even to build one for operation on the Ham bands providing that he does not interfere with anyone else.

But I know that Hams often use their own radio's to use on the business band they are licenced for and police and other agencies often use Ham radio's to replace outdated equipment.

Regards,

John

Exactly. And that's all it is - a basic knowledge.
>

Yup - but the written test was somewhat different!

And in 1919 the test speed was doubled to 10 wpm.

> If it was good enough back then when morse was a valid
> means of encoding information, its more than good enough now.

When did Morse stop being "a valid means of encoding information"? From
what I hear and do on the ham bands, it's still in wide use and
quite "valid".

> Don't
> forget, youse guys whined and complained about the shift from spark to
> cw as well.

That shift happened more than 75 years ago. About 30 years before I was
even born.

And it happened voluntarily. Tube transmitters gave results that were
so much better than spark rigs of the same cost, and used up so much
less spectrum, that it was a done deal by 1924.

When was that, Bill?

Since at least the end of WW2, there have been multiple amateur radio
license classes here in the USA. There have always been "rungs" - just
the number and their spacing has changed.

> IMO there should only be one license class. You should have to
> prove you know enough to get on the air and not cause QRM around the
world.

The result would be a license that was at least the equivalent of the
current Extra - as a first-and-only step.

Some of them obviously do. They're mistaken, of course. No way is it
an "exclusive club" anybody who can pass the tests gets the license.
Heck, they even let ME in!

Are you saying Firestiks work well of groundwave or DX? you didn't
specify. I had an opportunity today to test my installation, again.
I was heard in Texas, Kansas and the Mojave today on SSB, and the
bayou on AM from my mobile. I use KW-7's exclusively.

I think its quite odd that I have held an Extra for over 30 years and
so far I have yet to meet a single Extra that fits your mold. OTOH, I
have met manyh, and been one, who have done everything reasonably
possible to help newcomers get into the hobby. Including starting up a
VE team, the only one in the region, and running it for eight years,
until it virtually licensed so many other hams who eventually started
their own teams and the ours became redundant, so it closed shop.And I
didn't just run a VE team, I operated under the philosophy that getting
a ham radio license should be no more difficult than necessary. But the
open question pools are a travesty indeed almost fraudulant. Why pretend
to test complex subject matter when no actual learning is required to
pass any of the tests?
The fact that I and some others know that radiotelegraph code remains a
viable and effective while simple, easy to implement mode of
communications which can be used most effectively within ham radio, even
though its use has been abandoned by other services, seems to be the
main sticking point. Anyone who supports code and any sort of code test
within ham radio is automatically a target. So be it.

Dave!!!!!!

GLC1173 wrote in message <20001207234925.21294.00003414@ng-fd1.aol.com>...
Packrat quoted me:
How a
nationwide
trucker's strike can end Algore's coup fast

and replied:
>I thought unions were Democrat and urged >their members to vote as such.
>Wouldn't teamsters be a, what's that >word, union.

You're forgetting that much of the trucking industry is not unionized. "Owner-operators" - yes, the men and women who drive their own tractors who
first popularized CB - are not unionized. Many "company" drivers aren't either
- even though they definitely are "labor."
Truckers have both the most to lose in Algore's coup attempt - because if he
and his global-warming hangups win, diesel will soar to European price levels
(and U.S. truckers are barely making it now, with huge numbers of repod tractors glutting the market in turn hurting truck makers) - and a lot of power, because if even 5% of truckers strike, that means manufacturers cannot
count on adequate supplies of key parts (nor can they reliably ship product).
How a
nationwide
trucker's strike can end Algore's coup fast

Where does the name Ham come from?
:Thigh cut especially of pork from the upper thigh region.
You know,the upper part near the butt end. Other wise the stinky end near the
pooper and pisser.
A name very fitting of the group it represents.

It looks like I may have opened up can of red wrigglers here. I think we are both saying basically the same thing. However, for the purpose of comparison I think it very important to compare antenna gains without any reference to ground proximity. As for HF, much of this is skywave anyway and the atmospheric conditions can, and do, have a much greater affect on signal strength than any antenna placement.

> cber.

Where did you get that number? The FCC has the same number of field engineers to do Ham Radio enforcement as they do CB Radio. I would suspect the numbers to be about even. You may hear more about Hams getting busted because the rest of the Hams want to be assured that the FCC is keeping an eye on rogue operators. Remember we, Hams, have been BEGGING the FCC to do something about the small group of idiots we have on our bands, so the FCC makes it a point to publicize it more.

> I don't think it's sending much of a signal.

I guess you don't mine spending $7,000 on a fine I take it? I can think of better uses for the money than giving it to the FCC myself.

> After all, the
> hammies are being popped left and right, even Riley himself said
> complaints are down, which is why the enforcement log was scaled back to
> every two weeks.

That's good. Remember Hams asked for the actions, unlike the CB Radio group here. We don't like rule violators. Why, because we have a LOT to lose, spectrum, and our operating privileges. Not to be snotty about it, but Hams can and do operate modes you CBer's can't because you don't have the access to the spectrum to do it in. We can't afford to lose spectrum because some idiots can't follow the rules. For example the Hams in Australia just lost the bottom 10 MHz of their 70 cm band, and they may lose the top 10 MHz too. The 70 cm band is the lowest UHF band that has enough spectrum to run fast scan TV for example. http://www.icircuits.com/dats/dats.htm To do that one needs at least 4 to 6 MHz of bandwidth. Not only that, but here in the USA we have to share all of our bands above 148 MHz with other users. Hams are listed as secondary users on these bands so we have to watch how we operate.

> If it's meant to send a signal, the hammies don't know
> it judging by the actions taken by the feds.

Huh?! You just got done saying that FCC Ham enforcement activies are going down, so it has sent a signal. Clean up your act, or get busted.

> I respect your positon, as
> you are also aware of mine, I don't believe in being a jerk off on the
> air or off, hammie or no.

One can be operating legal, and still be a jerk, while another can be a fine fellow and be operating illegaly as you can get.

> The busts will go on, after repeated warnings.

The FCC people are not total jerks, but some times they feel they need to set an example. Some of the FCC enforcement actions posted by N8 point that out.

> If one can't get his act together AFTER a warning (in some
> cases, multiple warnings) hammie, cber, whatever, then the stupidity
> factor comes into play and my opinion is they should be popped if they
> are causing harmful, intentional, or malicious interference that may be
> deemed a safety issue.

Ah, now we get in to another area here. It all depends one who you ask if it is one of the above items. So for all the activity that can be collectively called illegal operations, whose point of view matters when that FCC letter comes in the mail? Yours or the FCC? Do you think they really care if you can "prove" nobody was harmed by the illegal operations? If CBers want addtional spectrum they would do themselfs good by cleaning up the band. Right now if I was at the FCC and was asked about increasing the 11m band for more channels how would you justifiy it, given the current mess? Why would I want to create a bigger problem than I already have?

> See, but once again, not every one will suffer.

Life is not perfect.

> and they weren't cheap. He said, and I quote, "I can afford that", and
> hammered down.

Can he afford a $7,000 speeding ticket? Some CBer's get hit with even more for their "speeding" operations.

> A few busts are all that is gonna come, and only in
> certain areas.

That is a fool's view - that nothing is going to change. If life has any lessons at all you will discover that things NEVER stay the same. At some point CB Radio enforcement will be stepped up. The bill just signed in to law proves that. I am not expecting a great deal to change with that bill, but you can see the wind has changed direction, and a storm may be on the way. One that some on this news group will look back on, and wished they had seen it coming.

> In some areas, like some mentioned, it's going to be a
> revenue enhancer until the court steps in and caps it.

As long as they law is being enforced fairly there is little to no legal reason to stop it.

> I totally and
> wholeheartedly agree with you, if one breaks the law, one should be
> willing to pay the piper, if it comes full circle. If you want to speed,
> be prepared to pay the fine. Nothing more, nothing less.

Then it would be a very interesting question to ask the news group, and see how many could careless about paying a big FCC fine along the lines of $7,000 to as much as $20,000. I am not talking about going to court to fight it and so on, just paying the fine, and shutting up. I doubt many even have given it, the fines, a thought.

I think you are splitting hairs, Gary. A dipole is considered to be a simple, half-wave resonant antenna. Extending this past the ideal length is considered a zepp design. It raises the feedpoint impedance and introduces reactive component. It is hardly naturally resonant.

MC

This is exactly what I'm talking about.

A licensed amateur being "censured" and "threatened" by an anonymous self-proclaimed *illegal because his opinion too strongly upholds the legal aspects of CB? Outrageous!

If someone disagrees, why should they pretend otherwise? Why should a person avoid saying anything that would make the illegal operators feel threatened or uncomfortable?

Leland; where's your self respect? You NEVER need to apologize for being an amateur or supporting legal behavior.

*I don't know what else to refer to you as, Twistedhead. You do in fact cheerfully support illegal CB operation.

Very sincerely,
Aaron Voobner

I think you are splitting hairs. A dipole antenna is any straight radiator usually fed at the center. I can be any length, half wave, 3/4 wave, full wave or any other length. The half wave is most commonly used as the feed point matches approx 50 ohms and can be used with 50 ohm coax without any other matching device. So not being a half wave length does not mean it is no longer a dipole.

MC 10kW Jesus wrote:

Tom, I am in So. Cal. When the splatter from the "superbowl" channels is not making the band unusable, the rude and inconsiderate behavior of various overpowered local "channel masters", foul-mouthed teenagers, music and sound effect players, and other anonymous jammers renders the 40 channels unusable for any normal conversation. (And yes, this is after the "skip" has subsided for the day).

What irks me are those who say "if you don't like it, leave". As if, rather than stand up for what one believes in, one must succumb to the will of idiots.

Hello All,

I have a Lazer 400 6 element beam, partially put together but then decided it was too big for my application, antenna has NEVER BEEN USED. I think I paid around $479.99 plus shipping for it approximately 6 months ago from Copper Electronics, would like to get $350 plus shipping or consider trading for a very nice Cobra 2000GTL or possibly a Yaesu FT101 series rig. I live in Southeast Washington State, would consider delivering within a 200 mile range, or can ship if needed. These antennas are similar to the Moonraker but much larger (31 foot boom) and built more sturdy. Please feel free to email with questions.

Thanks for reading,

John

I suspect California - particularly its big urban areas - is extremely
atypical of CB.
I'm both a ham and a CBer - and here in North Carolina, Ch. 19 is rather
inactive. It's much more active in Virginia as you approach D.C. - but neither
there nor here does it have practically any profanity. Nor does it have
practically any kids on it, neither there nor here.
As a ham, I know Southern California has long had troubles within its
ham-radio licensees' ham operations. Compared to the courteous and helpful
attitudes here, I think Southern California's CB - and ham - problems are much
more a comment on the local culture than on either CB or ham radio.

You don't seem to be paying attention, Leland. The ratio was a number I believe can be confirmed by contacting the FCC directly and asking them the disciplinary rate of hams vs. cbers in any given year. It is probably greater than that. They go after cbers in the future, it may change.
I realize this is hard for you, but pay attention..real close.. I never said I was willing to pay any damn fine. If I choose to operate illegally, then I am taking the chance. By taking the chance, I would therefore agree to a fine if I should get popped for such an act. If you can't do the time....and the law pertaining to cb is taken just as likely as the speed limits..a gamble of sorts. IF I choose to operate.
I'm not one of these guys (but you probably are) who tries and talks his way out of a speeding ticket. You pull me over, I sign my ticket and go on my way. If you can't distinguish between the lines, move on.
Secondly, everything you said about other bands, now sit up pay attention again, I DON"T CARE! They have no bearing in my life unless I am just scanning broad spectrum on auto. for whatever happens to come up. I don't waste my time, for you it may not be, for me, it don't apply so what you said got chucked in the outhouse.
Thirdly, the wind has what? The only storm heading your way Leland is the booming thunder and crackling amps dropping the maul on you when you get out on the cb band preaching!
Fourth, I don't speak for the group, just myself.
Fifth, I didn't ask for more spectrum. This has what to do with the topic?
And lastly, since you continue to refer to trolls to clarify, validate, lend credibility, and back up your position, it speaks for itself.

Since you volunteered yourself as Mr. Scott's advocated mouthpiece, no one is "threatening' anyone. Is it my fault you came to a battle of wits unprepared and feel inferior? No. It isn't. What would you expect if I was to come to the hammie groups and start preaching about this or that? The topic is cb. Period. There are all kinds of laws, don't mean we shouldn't talk about them. You are the type that wants "censorship", not I sir. If it isn't what is your definition of legal, you seem to have a problem with that. Here's a solution. A child safety program that disallows users to enter what may be offensive or questionable dialogue. Or maybe not read it? Now why didn't you think of that?

And all that will do is make unskilled and unknowing people
build them in their basement. Those amps will be even dirtier
then the ones you're bitching about now, because they won't
understand the basic concepts of amplifier design. They will
blindly use diagrams found on the internet and build for maximum
dead key with no regard to harmonics, purity and stability.

Despite the inevitable flames, there are a few truths to keep in mind. True, part 15 devices must accept interference - but I'd like to share an experience I had. I did work for a large corporation doing EMC (electromagnetic compatibility) testing on manufactured equipment. These were also sold in Europe; due to this, they had to be compliant with European standards to receive CE marking. One test I ran subjected the equipment to RF radiation. The device under test could not have any errors, nor any change in operation, when subjected to an RF field of 3 V/M. We usually tested at 6 V/M since the frequency skips were larger and the test would complete faster. Should it fail, the devices would be retested at 3 V/M. There are no such rules for devices in the United States. To put 3 V/M in perspective, a cell phone can hit you with close to 60 V/M when you have it in use. A dipole on your roof may put your entire house in a range of 2 to 30 V/M or so depending upon how far away in the house you are (with a legal 5 watt CB). The safety limit is around 60 V/M so you are very compliant. Would you believe we BLEW the monitor up at 3 V/M??? It started tearing at 6 V/M around 220 MHz and we retested at 3 V/M - and the monitor started tearing and then went kaput around the same place. A different monitor solved the problem. The point is, the stuff they sell in the US is often not very immune to RF interference. We can argue until the cows come home, but when Aunt Tilly and Uncle Henry start complaining again and again ... I honestly don't know how anyone facing this problem will find the law to be.

Mr. Twistedhead,

In point of fact, I *choose* to read your comments and I *choose* to
respond. And you, sir, are quite wrong to suggest that I (or anyone
else) should keep his opinions off this newsgroup because they do not
fit with your desire to promote a rosy view of lawless radio operation.

I believe I have a legitimate place in this discussion. Expressing
opinions that conflict with your (dare I say, batty) views is *not*
"preaching". It is disagreeing. You have every opportunity to go to the
ham groups and disagree all you want with the opinions you find
expressed there. No one will stop you, or even attempt to stop you --
unlike this group.

Sincerely,
Aaron Voobner

There are several men sitting around in the locker room of a private club
after exercising. Suddenly a cell phone on one of the benches rings.
One
of the men picks it up, and the following conversation ensues:
- "Hello?"
- "Honey, it's me. Are you at the club?"
- "Yes."
- "Great! I am at the mall two blocks from where you are. I just saw a
beautiful
mink coat. It's absolutely gorgeous!! Can I buy it?"
- "What's the price?"
- "Only $1,500.00."
- "Well, OK, go ahead and get it, if you like it that much..."
- "Ahhh, and I also stopped by the Mercedes dealership and saw the
2001models. I saw one I really liked. I spoke with the salesman, and he
gave me a really good price...and since we need to exchange the BMW that
we
bought last year..."
- "What price did he quote you?"
- "Only $60,000..."
- "OK, but for that price I want it with all the options."
- "Great! But before we hang up, something else..."
- "What?"
- "It might look like a lot, but I was reconciling your bank account
and...I
stopped by the real estate agent this morning and saw the house we had
looked at last year. It's on sale!! Remember? The one with a pool,
English Garden, acre of park area, beachfront property..."
- "How much are they asking?"
- "Only $450,000 - a magnificent price...and I see that we have that much
in
the bank to cover..."
- "Well, then go ahead and buy it, but just bid $420,000. OK?"
- "OK, sweetie...Thanks! I'll see you later!! I love you!!!"
- "Bye...I do too..."
The man hangs up, closes the phone's flap, and raises his hand while
holding
the phone and asks to all those present:
- "Does anyone know who this phone belongs to?"

<< Subject: Fw: For The Ladies

A man and a woman are riding next to each other in
first class on a plane.

The woman sneezes, then takes a tissue and gently
wipes it between her legs.

The man isn't sure he saw what she did, and decides
he is probably hallucinating.

A few minutes pass. The woman sneezes again. She
takes a tissue and gently wipes it between her legs.

The man is about to go nuts. He can't believe
that he's seeing what he's seeing.

A few more minutes pass. The woman sneezes yet
again. She takes a tissue and gently wipes it between her
legs yet again.

The man has finally had all he can handle.

He turns to the woman and says, "Three times you've sneezed,
and three times you've taken a tissue and wiped it between
your legs! What kind of signals are you sending me, or are
you just trying to drive me crazy?"

The woman replies, "I am sorry to have disturbed you, sir.
I have a rare condition such that when I sneeze, I have an orgasm."

The man, now feeling badly, says, "Oh, I'm sorry. What are you
taking for it?"

The woman looks at him and says, "Pepper."

Not a very well-thought-out answer, fellas.

Basement-built amps...unskilled builders...no regard for harmonics,
purity, stability? Check it out: this is exactly what is being produced
NOW. Nothing but good can come of getting these pieces of trash off the
market and off the airwaves.

CB rules - like traffic law - has always been driven by reality,
rather than legislative or judicial functions.
Just as the 55 mph national speed limit was repealed by Congress only long
after years of practically nobody obeying it - leading to a de facto
speed limit at least 10 mph higher, under which you wouldn't be ticketed, the
FCC dumped the callsign/licensing requirement after several years of almost
nobody obeying it in the late 70s when CB spread from truckers to seemingly
every car.
Now the posted speed limit has been adjusted to what was already enforcement
reality for years. CB may similarly be headed - if slowly - in that direction;
don't cause trouble and the FCC will leave you alone.
If linears are a big problem, I sure don't hear it here in North Carolina or
in neighboring Virginia (all the way to D.C. suburbs). You don't hear anything
on Ch. 19 unless you are within a couple miles of an interstate or other major
road - so obviously nobody's using that much power anywhere in this area.
N4GSV,
Matt (both CBer and ham)

Hello 130.If you have that 1x4 handy spark it up,theres a lot of big strappers in there that'll keep you on hold for quite some time.(not on purpose though,thats really not how it is on 915.

Now if I could just find out who the mental defectant is thats recording me and playing my voice back over the air ALL DAY LONG EVERY DAY.I'm convinced it's someone in the 'pile.434 wichita swung his 8 element around and said I'm probably right.
Gets a little nerve racking trying to talk DX with someone and all of a sudden you can't hear them because you're own voice is covering them up! I supposewhoever it is will dry up and blow away soon enough,or maybe he'll pop a few pills running a key for 6 or 7 hours a day.

It was a pleasure talking to you,and I'm sure I'll put it on you again

With all the "hooplah" going on here with Jerry Oxidine, TR@sky.net, Mr. Voobner, and our resident "JACKASS Basement dweller..." N8WWM, I'd like to present my troll here...

I'm a CBer. I will use the Citizen Band as I see fit. If I am inspected one day by our resident FCC Agent, I will let him/her inspect, pay the fine, get more equipment and operate again. Preach, troll, voice your opinion on this here NG and I still will not stop. DX on 11 meter is good enough to do without getting a license.

Speaking of resident FCC Agent, I have spoken to one that works on a Military Installation here and asked this person "why is the FCC not conducting any station inspections here?" ANSWER: "there is no money in trying to incriminate small time stations. We have bigger fish to fry..." So, for that matter, it just boosted my operative conscience and for the moment have put myself in a safe zone. I probably run the cleanest stations this side of the Mississippi. 5KW carrier, no harmonics, no bleedover. Better than my HAM friend two blocks from me who in my opinion has a clean station too but interferes with his neighbors 1987 General Electric clock radio. That's it!

I've thought about joining the ranks of the Amateurs in town. But the attitude I got when I walked into the towns' library (after one the Hams noticed a 55 coil on my pick-up truck) and was asked if I was a CBer, I said "yes!" and got the... you know, the "NO-CODE Technician" attitude of "holier than thou", frown of the brow, 1000 yard stare from these individuals made me absolutely furious. I haven't even taken the test yet and they were already banging away with "hmmmmmmm's" and the "hawwwwwww's" of how CB has gotten way out of hand and how "folks like yourself should be ashamed of..." this and that and on and on and on. I politely told the VE's that were there to hold onto the test for me (because obviously I wasn't gonna be taking this "right of passage into the realm of radio" written examination with the Devil and his agents lurking above me waiting for a sign of weakness before they snatch me and throw me a bottomless pit of argon asses (Extra Class licensees')) and left. To clarify, I politely told the HAM to take that damned test and shove it up you know where.

There was no need for that kind of attitude. I was willing to give up my wicked ways and return to the fold. I've learned what I know as a CBer from Cber's and HAM's alike. They taught me the way to use the force (radio) and to become a Jedi (radio operator) with theories and history, with lengths and resonance, with sine wave and modulation, all of which I have attained in good faith. And to be treated as a delinquent of the "cloth" just amplified the "there is no where for me

to turn..." I love radio. And I will continue to operate as a radio operator. And if by chance I should attain a ticket, so shall be it.

But for now, as I've said before...
"I'm a CBer. I will use the Citizen Band as I see fit. If I am inspected one day by our resident FCC Agent, I will let him/her inspect, pay the fine, get more equipment and operate again. Preach, troll, voice your opinion on this here NG and I still will not stop. DX on 11 meter is good enough to do without getting a license."

You know, if I had had the rotten luck to be born with the last name of "Voobner", well, I guess I'd be an old, bitter man also. Really, to be born with a last name that sounded like a schoolyard insult...You Voobner! or, Don't be such a stupid voobner!, or simply, "Voobner voobner"... I feel your pain and I forgive you your transgressions. It must have been incredibly tough for you. ;-)

Pardon me. It was an illegal radio you were looking to BUY on eBay, not
sell. I have a hard time sorting out all these illegal doings. Anyway,
the point is, you were frustrated by EBay's crackdown. (see below)

And your just the little voobner buckaroo to call attention to it, eh
Voobner? Were you sheltered as a child? Told "No" a little too often? I can
see you, staring out the window with longing, not able to play with the
other neighborhood children because mother says they're dirty little
poopie-birds, right Voobs? Did Mommie tell you what to do if one of those
dirty little neighborhood girls wanted to see your little "tallywhacker?"
Mustn't mustn't, you'll get it all dirty!
Yeesh. Makes my skin crawl just thinking about what it must be like to
be you.

Can't put together a logical argument to support your points, so you
resort to adolescent taunting?

I am so disappointed.

Look here Jeff, if you are going to attack me personally, you will need
some personal information. Here you go (and all you other trolls pay
attention too) :

*I am 32 years old, not a ham, but studying to become one.
*I have a MA in business and an AA in optical science.
*The Voobner family has distinguished itself in some of the most famous
battles fought by US forces. Check your military history.
*The Voobner kids are 11 and 13, both honor students.
*My personal vehicle is a Ford Ranger.
*My middle name is Harold.
*The Voobner dog is named Weldon, after the German physiognomyst.

Have fun.

Sincerely,
Aaron H. Voobner

Aaron likes to speak of himself in the third person as most anal retentive,
repressed individuals often do. Explains a lot, IMO.

Gad, but you are one to go on, aren't you? I was simply making a statement about how the radio had been removed so quickly. How do you turn that into attempting to "sell" and then realizing your error, into attempting to "buy" an illegal radio? You are an self-important little goose-egg, aren't you?
Does Mommie know how late your staying up?

You say you're not a troll, but you should read the messages that
you've posted and the unkind responses you get from your posts.

A troll post is a one that is posted only for shock value and
the ensuing responses that one gets from them. Many of your posts
are rude and condescending. Maybe you should reconsider, and ask
yourself why you were not accepted the the new group.

its illegal depending who owns it.
so whoever decides it is their business to say whats illegal or not, as if it wpuld stop someone from buying it, you need to shut you god damn mouth.
and N8WWM.....im half tempted to drive to toledo from detroit and give you a lesson on whats legal or not you asshole.
someone should ban you and you need to keep yourself on the amatuer boards.....what about when all those people got popped down on 75/80 a short while ago? bet you didnt go on the ham boards sayin hahahaha, did ya punk.

If this NG dealt with CB, the primary topics would include ways of properly wiring microphones and antennas, how to check properly for tuning of antennas, etc. A quick read shows little of this and much bellyaching about amplifier quality, how to find a good 'tech' who can tweak the radio, complaints about all those hams who hate CBers but usually go unnamed, where to buy 'export' radios at a good price, what's going on at 27.555 (a non CB frequency), and so forth. Yep, the real CBer is apparently in a minority here.

Hello The Packet:

Yes you can use PL-259 connectors on it. I have supplied several lengths
of the LMR-400 coax with PL-259 connectors soldered onto the ends for
guys who want new coax with the PL-259 connectors already soldered on,
for their antennas.

> that damned test and shove it up you know where.

If that is what you encountered, good for you. And that comes from an old Extra with rosin in his veins and burn holes in the carpet. I think you may have us OT Extras figured wrong but I am coming to believe that you may have the codeless contingent figured just about right. In fact I am coming to look at them as a major wart on the ass of the hobby. I do a post-restructuring analysis of amateur licenses on another group just to stir the old shit just a bit; one of the things that pops right up is that Techs don't advance in the hobby. So we seem to have created a collection of 'hams' who come storming in claiming equality without doing a whole lot, get stepped on, and go out stepping on people like you but would never stoop to a simple-minded code test.

Do yourself a favor, use the facilities of QRZ.com, AH0A.org, and me if you need to. Get the code test out of the way and take the verstunken Extra. Then go back to the club, piss on the Techs' shoes, and tell them it is raining. Make some cryptic comments about 'real radio' in the process with a knowing, superior air. Have some fun with the dangling hemorrhoids.

Can't say that I totally approve of what you are doing but who asked my opinion? What I do know is that I have seen any number of 'outlaws' become some very good amateurs with not a lot of help and even less preaching. Elmered a fair number myself.

Go ye and sin some more.

Dick McCollum NBK

YEA things are getting mighty interesting again here in the land of sand, CD! Gore buying his way through this and that, Bush filing suits to stop this and that, Gore filing suits, etc. They are both clowns who are acting like the babysitter just took away the toy they were fighting over. I think this is the one that we are gonna get what we deserve, hopefully the apathy in the country will do a reversal by next election and we can just elect a king and be done with it. What bothers me more than either of the candidates is that the next interim sittingduck that gets to call Pennsylvania Avenue home for the next 4 years is more than likely going to have the line-item veto power. As I said, the Royal post is about to get even more soiled. Still don't see how they can do it this way and call it fair. Recount? Do the entire state and military ballots ONCE, and whoever objects or cries the loudest is automatically disqualified. CD, at this point, I'd take a write-in candidate over both of them. Damn feds are everywhere,,,tell ya' one damn thing though, there is almost as much activity on the bands that we aren't supposed to hear down here as there was during the little Cuban boy Elian's circus...maybe more. It definitely is interesting spying on all those supposed "secure" transmissions between the media whores and the regimes that are-a-fightin'! If ya' got the capabilities and ya' know what I mean, tune on in...you won't believe the sheeeeit you hear! Nuthin' is surprising. But you DO have a point. I hate to use the term "Federal protection" as in Marshall Law, but the plan is in place down here just in case! It keeps on going and going...

President HR2510 10/11m rig, cosmetics quite nice, shows minimal use, good and loud, operates 100%, stock mike, manual included. Hate to sell it but new toy forces me to let it go. $195

Uniden PC-76 XL 40 channel AM mobile, with internal Connex dual pot echo board installed nicely (no extra holes, uses Delta Tune position), peaked and tweaked for big audio, stock mike, looks good. Too nice a radio to let sit gathering dust on the shelf won't fit in the mini truck, $70

Cobra 139 XLR 23 ch. AM/SSB base rig, came from an elderly gent's estate and will probably need some work from long term storage, looks super, stock mike. Gotta be worth $25

HyGain IV 40 ch. AM only base rig, with that good PLL02a chip, easy to convert, runs great, looks like hell, great bench or garage rig, $25 will throw a hand mike in the box, you wire it up.

Turner Plus 3 amplified base mike, decent shape, wired for the HyGain above, 5 pin DIN, $30. Or sell both of 'em for $50 together.

Uniden Pro510E 40 ch mobile, looks OK, think someone tried to "peak" it and cranked the VCO til she unlocked, stock mike, U-Fix $15

More stuff to follow as I dig farther back on the shelves....

Terms: Prepaid MO only, shipping via USPS insured not included, will consider swaps. looking for 25LTD, AM/SSB mobiles, scanners, amps, etc.. Email replies to wdecker1@rochester.rr.com

Greetings!

My thoughts?

The top-loading of the coil section, being above the ground losses that are incurred using loading that is closer to the other element [that being ground image] are better in many cases, but not all.

The top-loaded antennas lose against a base-load whip due to physical constraints and wind loading present.

The winding of the load is a key importance - as well as it's location and the overall length of antenna.

If you use the same number of windings near the bottom of the whip, next to the ground plane image, you have a higher "Q" factor to deal with and affects the ability to capture signals. They've got to work thru the "Q" of the coil.

If the coil wind was longer, not necessarily in diameter, only as if we relate to porportional diameter to length, the coil working the other interactive surface [the ground plane] has less loss and starts to arrive at gain factors closer to the gain of the simple top-load.

But them, here's the problem, the definition. A base load with a smaller porportion of the coil [smaller coil] to whip length, has the greater loss, than a base-loaded coil of larger length and diameter with the same whip length. You use less winds spaced apart to keep whip length nearly the same - which affects "Q" and loss and brings this type of antenna closer [read:close but not at] to the performance of a top-loaded antenna.

The spacing of the winds and the conductor diameter are the biggest culprits in the loss game.

One way to get around this type of problem in comparison results, are to use a different electrical length and adjust the winds accordingly on top-loaded antennas.

Thats why you see "5/8th wave tuned, or 3/4 wave tuned". The 5/8ths is the maximum length you can acheive with a single lobe [ground wave] radiation pattern, the 3/4 give you multi-lobed results - skywave and ground wave.

You can get 5/8th wave properties out of a top loaded antenna, but you can't acheive those same results with the base loaded types. Simply due to the location, diameter, and number of turns needed for whip length make the physical problems hard to work out and therefore are

shorter in length.

Remember, we are talking about electrical characteristics, not actual comparisons to the true 5/8th wave antennas. You still suffer far greater losses with any antenna that is shorter than it's 1/4 wave length counterpart.

You can compromise this by affecting the electrical properties. You can lengthen the coil winds by also increasing the length and diameter of the radiator form. You capture and radiate with greater efficiency with the longer antennas, but still suffer from losses in the coil winds.

And once again, we have the adage, use the longest antenna acceptable to you and your vehicle.

Ask him if he can tolerate a 1/4 wave [108"] long antenna on his vehicle. If so, you're answer is already in front of you. Use the 1/4 wave whip and call it good. If not, then use a top-loaded 5/8th wave antenna for his needs. Unless he likes to talk skip, then a 3/4 wave tuned would be good - the closer the length of these top-loaded antennas are to the 1/4 wave length, the better off you are in performance.

This is from a guy that uses 4 watts...so your results with his set-ups should be similar.

On Wed, 6 Dec 2000 14:19:51 -0500, while the modem was pondering it's navel, "Joe" <joeamp@mindspring.com> dissertated the following:

Aaron Says>>Furthermore I feel that eBay did the right thing in banning auctions for
illegal cb amplifiers. A step further might be a more restrictive ban on the so-called "export" radios that are designed for CB operation and are responsible for 100% of the trucker incursions into the 10 meter amateur frequencies.
Sincerely,
Aaron Voobner

Hmmm, maybe they will do the same for 90+ % of the ham radios that have been modified and made to transmit out of band? How many CB'ers do you hear jamming public safety frequencies huh? Mostly its hams...
Until the FCC started taking a stand (mostly because one of them is an active ham operator), the ham bands were in the same shape as the Citizens Band if you figure out the percentage of operators in both radio services. One only needs to read World Radio or some of the other publications and then do alittle math.
Sorry, but the Amateur Radio Operators have no better status then the CB'ers..To say they do is only lying to themselves.

One other note, I'm also a Amateur Radio Operator and also work in the public safety field. Right now we have a ham running around the Minneapolis/St. Paul area jamming our emergencyfrequencies.
Geez, and can't remember that last time a CB'er was caught for doing that... *lol

Some of these guys need to take their heads out of the sand and face relatity. Your NO Better than anyone else and to believe otherwise is a joke.

Far more emergency traffic has pass over the Citizens Band airwaves then *ALL* of the Amateur frequencies combined.
One only face the facts and keep personnal opinion out of it. Facts are Facts.

Both radio service have there pluses and minues.

>CB'ers..To say they do is only lying to themselves.
>

We are accountable, and we are not as a whole group operating illegally, as the entire group between 27.405 and 28.00
and below 26.965 is. The whole lot are illegal in those cases. You are illegal as soon as you key the mike. Hell, you are illegal if you run a non type accepted piece of gear, especially amplifiers, and there are NO rigs the general public can buy that are type accepted for operation on those illegal freqs. Who is lying to themself now?

I never wanted to stop anyone from operating illegally. They will get theirs when the new laws take effect. I just think it is funny how all the illegals whined about the bill that was passed, and I poked at 'em about it. Keep operating there, keep on deluding yourself that no one will bust you. I think it is funny.

And the amplifier is illegal, period. It is not FCC type accepted and also puts out an excessive power level.

The only amplifiers that are legal between 25 and 34 mhz are those modified for 10 meters by hams, or sold for export. Export means out of the USA, you doo-da.

Come on down and visit anytime. Just contemplate the consequences.

>At least one thing about them, they do know something about HF. You still
>trying to get five words a minute. Technician Forever wannabe
>"N8wwm"
N8wwm replied:
Actually, after working more DX in cycle 21 illegally than all these weenies combined, I got bored. 6 meters has been a blast, and I am working on CW ONLY because I want to get on the 6 meter spotting net on 10 meters.

I am a Technician because the things I wanted to do are allowed under my privileges. If they were not I would have long ago upgraded.

I am certain that my technical knowledge exceeds the average Technician and I know my experience does. Not that it matters, we are all equal in regard to privileges.

Lotsa people operated illegally in the past and are now hams. I am sure some of you are drooling at my admission. It was a case of seeing the light and going to it that made me take the test in the first place, aside from being bored with 11 meters. I was off 11 for at least 5-6 years before I even got my Technician ticket.

Now, slam me some more. I really don't care. Call me anything you want, I really don't care. It brightens my day to read the
silly ranting on here.

Maybe so, as far as illegal hams go...thats OK...they are EASIER to bust because the callsign gives even more accountability. Amateurs have more to lose. Three cheers for the FCC if they do bust 'em.

You miss my point completely drivebyshootah...

Illegal is illegal, regardless of having a ham license or not. I make no distinction. All this "hammies this hammies that" stuff is just a bunch of bluster. So what? Bust 'em all, I say.

From nearly laughing my sack off at you lame little sissies calling me names.

LAME LAME LAME...but thanks for playing. You get a complimentary set of coffe mugs as a consolation prize.

Merry Christmas, I hope the brain implants work and you all can get jobs at McDonalds.

Maybe some can't handle the truth. (Jack Nicholson) Then again, maybe just ignoring this fella is the best way to handle him? Just my opinion. I guess I've gotten soft in my old age. 10 years ago I would surely be calling for his nuts in a jar.

This book is highly reccomended by 1mangang, who is the father of the brides. He has been selling it for me and made enough money for his sex change operation:
Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have, with adult supervision, drooled into a dictaphone the following masterpiece of authorship and it is now available at your local book store...Don't miss "Muskrat Love", the heartwarming story of 3 illegal CB'ers who find love and marriage through uniting in hatred for N8WWM, the mean 'ole hammie they wish they were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and into 10 meters, listen to the 3 sweet little CB'ers plot, plan and generally scheme to out flame the greatest flamer of all time. Read about their use of electronic components as aids to their sagging libido's. Learn why no female relatives ever come to visit. Look at the special 13 page photo insert that shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife", by Bill Clinton, and will become recognized as a major literary accomplishment. The trippin' trio have outdone themselves this time, and you have just gotta read it to believe it. Only 29.95 now at your local bookseller or order online at

Well, close...

It does NOT allow local authorities to enforce federal laws
with regards to CB.

It allows local communities (ie states) to pass their
OWN laws, it they choose to, which can then be enforced
by the local authorities.

These new 'local laws' are only 'subsets' of what the fed
now says they can pass of the federal laws. Ie, a state
can 'copy' a federal law and now enforce it. Or it can
copy part of a federal law, and enforce it. But it cannot
create NEW law, or even copy parts of federal laws
EXCEPT for those area specifically allowed for in this
bill.

Andy:

That was sarcasm.....

I've always been of the opinion that a plain, ordinary
noise-cancelling mic, and a well tuned radio, will give the cleanest,
strongest audio... That opinion has been confirmed by reports from
many people about the 29's, 76's, 148's, and Grant's that I've run in
the past and present, stating that my radio had good, strong, clean
audio, was HIGHLY readable, with no distortion or overmodulation
apparent. The radios look good on the scope, too, showing a clean
curve at the output stage.

Power mics, in my opinion, just pull in alot of background noise, and
actually make the radio work too hard trying to clip back all the
excess audio input, as well as eating up a bunch of expensive 7 volt,
or even more 9 volt batteries...

Just my two cents... But I don't yell into the my Astatic 636L... I
don't need to.

A LOT of the issue with power mics is from the 'old days' with crystal mics. Crystals put out VOLTS! Where dynamic mics put out tens of millivolts. Even with some simple amplifiers, dynamic mics just didn't put out enough 'oomph' to let the older rigs audio limiters go into compression. As a result, the big 'crystal' mics always seemed to do a better job.

But with modern rigs, and modern mics, there is MUCH less of an advantage to power mics. In fact, most of their advantage is that you can turn them DOWN when it's not needed. They still amplify, but then attenuate to be marginally better than a stock dynamic mic. If they didn't, they'd really sound like crap on most rigs (hmm, come to think of it... No, never mind...)

Actually, the BEST setup is to get a mic that can drive your rig to where the audio limiters compress without distortion. If a power mic can do that, then it's a good investment. But I have to say that MOST of the rigs in the last 10 or 15 years have mic preamps built in that will more than do what is necessary in place of a power mic.

However... Power mics DO have the trait that a lot of them 'tamper' with the spectrum. More bass, more highs, more midrage, whatever the manufacturer thinks makes him unique. If you like the sound of your power mic, fine.

So, power mics DO have some advantages.

A volume control that can be turned down.

A frequency response that you may like better than stock

An output level that MAY be better matched to your rig.

Overall, if you like them, fine.

Mike

I couldn't agree with you more, Gary and Sparky.

I was initially shocked to read this newsgroup and find it utterly dominated by illegal freebanders, high power junkies, and peddlers of CB amps. I was appalled to find what amounts to a "school for RF criminals". Discussions on everything from how to modify FRS radios...to transmitting on HF airliner frequencies!

What's amazing is that when responsible individuals protest this illegal focus - they are shouted down by the pro-illegal contingent. What's even more amazing is that they stay down.

As far as I can see, rec.radio.cb is mostly used for trafficking of export radios, modified amateur transceivers, and contraband CB amps. This stuff ends up in the hands of truckers and freebanders who (by mistake or by design) show up on the amateur frequencies. Therefore, it is every ham's right to come into rec.radio.cb and shout - LOUDLY.

Sincerely,
Aaron Voobner

Body handling: HTML body converted to readable text

>
>It allows local communities (ie states) to pass their
>OWN laws, it they choose to, which can then be enforced
>by the local authorities.
>
Exactly!
Or enforce existing public nuisance laws against illegal ops. It will likely be a double whammy, the locals will make a misdemeanor bust, and then after conviction the FCC can act if it wants, as they have reserved the right to do so.
Probably will be on the order of what the local cops do now when someone has a loud stereo going at 3AM, or something of that nature.

Again, the simple truth that the folks on here just hate: Legal operators, be they CB or Amateur service users, will be exempt from enforcement. The only ones impacted will be the illegals. Read the bill.

I can't wait til the first bust. These guys think they have a right to use illegal equipment on frequencies that are allocated to other services. All I hear is "hammies this and hammies that". Whiners, all of 'em. They operate like fools and when something gets done about it they start blaming others for causing the problem. Typical of children.

When people come to this NG and support an issue they do not like they make threats, scream, holler...just like they do on the CB band. Their actions here are strong proof that the new legislation is timely and needed.

What we basically have here is a tribe of aboriginal stone age heathens with no concept of accountability. It is high time some fannies were blistered by the law and I am one who is happy to see it.

They can cuss me out, they can call me names, they can publish my address in the NG, they can threaten to come to my home, ,they can do what they wanna do...every time they do it just adds proof to my words. I knew my info was in the public domain from the start, unlike these clowns who hide behind phony email addresses, made up callsigns, and silly ideas about right and wrong that can be poked wide open in 1 second of rational thought.

Anyone who disagrees with my point of view is welcome to do so, I promise I wont treat you like these guys treat those who disagree.

In the meantime...

Merry Christmas...maybe you should beat up someone who disagrees with you in the name of God. Better yet, tie 'em to a truck and drag 'em for 5 miles. Either of those actions is bound to get you taken seriously. I mean, anyone who

behaves like that OUGHT to get what they want...right...sure...of course. Maybe if you do any of those actions the freqs. you play on will be given to you by the FCC. Maybe if you do it enough you will even get all the ham and commercial bands.

Look at hr 2346, there must be probable cause before a Commercial
vehicle can be
pulled over. That is, he must be caught in the ACT, no fishing trips
allowed
based upon Antenna or it must be in plain sight.

The same laws are in effect today as they were last week and 10 years ago as well as 30 years ago, the FCC is still out there They cannot go after the cb shop who sells export radios or the amp makers, or the technicans that work on them there towns can only enact a statute or ordinance regulating the use of a cb radio not authorized by the commision or un authorized operation between 24 and 35. they cannot go after anything else that is the FCC's area.

Jeff,

I want you to listen closely because I am going to let you in on a
little something here.

You guys in this newsgroup create your own trolls.

It's true. I didn't believe it myself until I looked into it. Anyone who
does a little research into the newsgroup archives will see it very
clearly.

It's a pattern. Someone comes in here (usually a ham, sometimes not) who
disagrees with the illegal focus of the group. Their initial posts are
factual and not inflammatory - yet they are rudely told to go away.
Their name and address is posted. Threats are made. Personal attacks and
profanity are unleashed against them. Naturally, the attacked person
verbally retaliates.

And you have successfully created another "troll".

It happened to Mark Fuller. Leland Scott. Dwight Stewart. And others.

Now you are doing it to me.

Sounds like you guys truly want another troll. You certainly are working
hard enough at it. OK, you've got one.

Sincerely,
Aaron Voobner

Re: Your user superswangthang

http://www.geocities.com/superswangthang/

The equipment on this page is illegal. They are amplifiers that work on radio frequencies between 25 and 34 megahertz. They are specifically banned under FCC regulations because they cause harmful interference to other radio services.

The following is a copy of a recent news item that may be of interest to you.
FCC to Monitor Auction Site for Illegal Items
NEWINGTON, CT, Oct 24, 2000--The FCC says it has reached an agreement with the eBay auction site that's aimed at curtailing the sale of clearly illegal radio equipment.

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth says eBay has agreed to cooperate in removing advertisements in which the item for sale "is clearly non-certified." Hollingsworth said most of the equipment involved falls into the CB category, including illegal amplifiers.

"I've got a whole folder of people who have been complaining about this and will be delighted to know that the Commission is taking action," said the ARRL Regulatory Information Branch's John Hennessee, N1KB.

Hollingsworth said a review team within the Technical and Public Safety Division of the FCC Enforcement Bureau is screening eBay ads each week. He said the practice could be extended to other auction site if the FCC learns of similar problems.

Hollingsworth credits complaints from the Amateur Radio community with getting the new system in place. "I've been collecting complaints for a year, but the amateur community really generated it," he said. Hollingsworth says he sees about 10 complaints a week about auction site advertisements--sometimes several about the same ad--and has been forwarding all complaints he receives to a "duty team" within Technical and Public Safety. He cautions that complaints should be based on clear-cut FCC rules violations, however, such as attempts to sell illegal linear amplifiers.

"Amateurs can keep sending me items, addressed to fccham@fcc.gov," Hollingsworth said.

Also, here is a copy of this person's email threat to me, made on the newsgroup rec.radio.cb

Wrongo dude, They can declare an interfering illegal a public nuisance.

They can close down a shop selling illegal items by simply passing a law now.

They will not usurp the FCC, they will enforce the law.

Dream on.

NEWINGTON, CT, Oct 24, 2000--The FCC says it has reached an agreement with the eBay auction site that's aimed at curtailing the sale of clearly illegal radio equipment.

FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth says eBay has agreed to cooperate in removing advertisements in which the item for sale "is clearly non-certified." Hollingsworth said most of the equipment involved falls into the CB category, including illegal amplifiers.

Doug,
From one ham to another, GIVE IT A REST!
If you want to set an example, BE THE EXAMPLE.
your postings are redundant and childish.
Everybody is aware of the enforcement issue and what is illegal
or not, all of your postings will do nothing to help you it just
makes you look stupid. so GIVE IT UP! the info on QRZ I see you are a
Technician if this is so,
shouldnt you be trying to learn the code or seeking further
advancement in ham radio or are you going hang out here on this NG to
continue this childish behavior? the reason I posted my question to
you here is
(1) The cross posting to other groups as to your behavior.
(2) Your actions and how they represent Ham Radio.
(3) Dont see many other hams here acting like you do if so they to
should follow what I said in the second line of this post.
If you disagree with me do such through email.

1390. Threats in rec.radio.cb

Newsgroup: rec.radio.cb
Date: 2000-12-09 23:20:16 UTC
From: aaronvoobner@my-deja.com
Message-ID: <90uenc$7ts$1@nnrp1.deja.com>
Source record: 62772

It has come to my attention that a number of persons posting opinions supporting legal CB operation in this newsgroup have been the recipients of death threats and/or threats of bodily harm from anonymous persons who hold opposite views.

However childishly stated or delivered these threats might be, I can assure you they are taken VERY seriously by federal authorities. A personal affadavit has been forwarded to the FBI Cyber Crimes unit along with a request that this newsgroup be monitored for purposes of investigation of these threats.

Some of you may be awaren that an individual on this newsgroup was threatened and subsequently murdered 4 years ago via a package bomb delivered to his home. I have no doubt the FBI will not hesitate to act on this matter immediately.

Good. Although from what I have seen, the real operators hardly come
here...Sheep rapists like you are prevalent.

Back under your rock, you CB dweeb.

Take your lame assed "your mama" post down the road to the rec.4thGrader.humor
NG where it came from.

When I first had someone slam a "your mama" at me I was a lot younger....That's
old stuff, and was thought up by better flamers than you. You aint shit and you
know it.

Try something original and they may let you take off your diaper and bib.

So does your mama, we both laughed as the other half of you ran down our legs. Sorry you little trick. The part that ran down our legs must of been the section of your brain that does the thinking. You are the reason the news group has become so funny. All the REAL radio operatqrs set back and laugh at you. You should invest this time you waste into Morse code practice and attempt to obtain a real license.

Hey Donnie,

That whiny attitude does more to keep the highly technical folks away from ham radio, then being able to be looked up in a database.

It also keeps regular CB'ers from ever thinking about becoming an amateur. If you saw some of the emails I have received, you would know firsthand that many won't ever see a VE because of actions like Doug's. I hope Doug is proud of his anti-amateur behavior.

Don,
If you want to correspond on the issue by email then dont post it to the group

If you dont like my posts dont read them.

I have said several times here that my actions represent me, nothing else. I dont care what a whole class of criminals think about me. The hell with em.

They wanna slam me for expressing my opinion, I slam back. It is fun and harmless, except to the defectives on here that take it so seriously. I can take all the name calling on earth. My self esteem is not challenged by anything said on here.

This is a bunch of lamers who cant do anything to a valid arguement but shout it down.

Voober,
Please take a look at the headers in the post you're answering before you start casting aspersions and accusations you cannot backup.
While I did not author the post you are responding to, I suppose I must admit to agreeing to it. I have never in my Internet Life gone out of my way to go to any BBS', News Groups or any other forum and tell the dwellers that reside there I do not agree with their stated position and that what they are doing is an illegal activity. You, on the other hand, are going out of your way to create an uncomortable atmosphere in this News Group, simply because you do not, for whatever reason, agree with the "alleged" illegal activity here.
Voober, I want to let you in on a little secret: Nobody that posts in this News Group would deliberately go out of their way to call you out on your statements if you would just keep your draconian and Republican inspired views to yourself. You cannot stop anyone from discussing amplifiers, export radios and the like. What do you expect? A mass conversion? I find it amusing that you're "studying" to become a Ham. Most of the posters in here could, no doubt in my mind, trot on down to wherever the tests are given and easily pass the no-code portion of the Tech Exam. Learn 13 words per minute and I'm sure a lot of them could also pass the Extra Exam. Some choose not to. Some already are Hams and choose not to wear their status on their sleeves like it makes them better. You, on the other hand, because you are "studying" to become a Ham think that "studying" gives you the right to come into this News Group and start acting like you are above it all, thus implying, that we are beneath you.
Listen closely, Voober: I, and a lot of others, simply do not care what you think and will continue to conduct ourselves in whatever manner we see fit. You do not matter. Get it?

Jeff

Yep...they holler about freedom and then threaten opposing views. Typical.
Have I threatened anyone in here? Nope.
That's OK though...I know me one dude here who is gonna make the papers.
I am carrying this through to the limit.

Scott,
you are correct, I am an ARRL VE and
even as a General Class Operator I have
elmered quite a few folks from CB free band
to ham radio, however I dont endorse Doug's behavior
it does detract from ham radio at large.
i did recieve a email from him but his actions here and there
speak for his childish behavior.

Kp82<made up illegal callsign> dribbled forth the following nonsense:
>Mr Voobner,
>Why do you care what i am or what i may do? if my freebanding is directly
>affecting your mental health i apoligize.
>

N8WWM eloquently and accurately rebutted:
First, it is APOLOGIZE...good thing FCC tests don't have a spelling section, huh guys?

Second, your response to Aaron just confirms his thesis.

Third, it is not "freebanding". You are not in some unallocated spot in the spectrum, you are illegally intruding on other radio services' legally allocated space. Not that criminals like you give a crap about THAT minor little issue. You spew other anti ham and "hammies this and hammies that" stuff to obfuscate the fact that you want to work HF DX, but will not obtain an amateur license that would legally entitle you to do so. You say things like "Well, that mean 'ole N8WWM has made me NEVER want to be a ham!!" Just more hogwash to cover up the fact that you are breaking the law and do not care.

Fourth, I think you are all a buncha little piggies squealing cuz someone shined a light on you. Poor babies. My heart bleeds.

1409. Re: Threats in rec.radio.cb

Newsgroup: rec.radio.cb

Kp82<made up, illegal callsign>spewed forth even more dribble:

. if you guys would stop being assholes you wouldnt recieve a
>threat
>from who ever it was. its not your opinion that people do not like, its your
>attitude and way you deliver your opinions. wonder what flavor doughnuts the
>fbi men are eating these days?
>

N8WWM, as usual, reduced his arguement to used kitty litter with these words:

Ahhhh NOW I get it Tim: Deliver the words how we want them delivered or we will threaten you...ahhhh...Well, guess what you facist twerp, I am not the one the Feds are gonna be dealing with, so again you show the immaturity that comes from being in denial of reality.

Your sentence is to be confined to channel 6 with a Sparkomatic CB and a gutter clip center loaded whip on your eaves trough for a period of 10 years. It is remotely possible that in 10 years you will be able to make coherent, realistic conversation, but I doubt it.

How pathetic can one get?

this has been going on quite awhile ,you can't have battle of wits with someone thats unarmed . If you ignore" IT" and " IT" doesn't get any attention "IT" will dissapear, listen to some of swap nets on the ham bands, it is hard to ignore{people} like "IT" but it is the best way see i didn't ignore "IT" either.

Apparently, he somehow broke the 6LQ6 tube he placed in his lower bowel.

Hospital spokesmen report he was carried in by paramedic's screaming "chickenhawk, chickenhawk, chickenhawk", and fought 5 nurses and 3 orderlies for posession of the Emergency room computer system. All of this while massaging his muffin at the same time.
After the thorazine wears off, 1mangang will be placed in a home and given a Sparkomatic cb with a tape of N8wwm hidden inside. This will provide the needed therapy to get him back to his hateful self, as the tape will play the words "lamer, lamer, lamer!" at random intervals. He will be released from the home after he admits the superiority of N8WWM.

I'm afraid I must disagree.

You want hams (and others) to come into this newsgroup, hat in hand,
terrified of "offending" illegal freebanders and high powered jammers,
fearing they may accidentally alienate a future ham convert.

An "Aw shucks I don't care what frequency ya transmit on or what power
ya use, long as I don't hear ya" attitude is what the illegals want to
hear. And hams go along with it - because they assume 'you get more
flies with honey than vinegar'.

I challenge that assumption.

CBers who truly desire to upgrade to a radio hobby more substantial than
CB do not need recruitment. They take proactive steps on their own to a
path that leads to ham radio.

The hardcore illegals will never come to ham radio. And with their
criminal "it's OK to steal if you don't get caught" attitude, you
wouldn't want them if they did. So why fear "offending" them?

Why pretend that illegal transmissions on 10 meters are OK?

Why fear offending people who think all rules, including those of the
FCC, are a joke?

Why soft-pedal the idea that transmitting on public service, government,
and aircraft frequencies is dangerous and irresponsible?

Why look the other way when 25-32Mhz export radios are flagrantly traded
and sold to unlicensed individuals?

Why show any respect at all to people who openly violate the rules of
common courtesy and respect for others by unleashing giant
spectrum-splattering amplifiers on the public airwaves?

Of course, even criminals have rights. They have the right of free
speech, and the right to post their little fantasies about freeband
radio and big amplifiers and such -- but they don't have the right to go
unanswered.

Seriously,
Aaron Voobner

Try getting WebWasher: http://www.webwasher.com/ -- it's free for non-commercial use.

I have it set to strip out all JavaScript popup windows whenever I surf. You can set it to strip out advertisments, scripts, applets, etc, etc, etc. Quite handy. :)

Doug,
They have a name for hams like you, LIDS
your actions both on the internet and the air detract from our
wonderful hobby. Once you become a slow coder you'll fit right in with
the crowd on 3.950 14.313 3.901 and elsewhere the LID crowd hangs out.
With an attitude like yours I'll be buying your gear from you a year
from now, ask yourself WHY? I need not explain.
As for our C.B. Associates, I certainly hope this hasn't discouraged
anyone from becoming a ham. You will find there are a few good MEN out
there,

Tom,
you are correct sir,
I was fortunate not to have that type of experience.
I was welcomed into Ham Radio with open arms because I had the
desire to change and learn. I too came from years of CB,Freeband,
amplifiers,e.t.c. now that is behind me we certainly try to set an
example of how you can be a GOOD ham. I sit here and see Doug stoop
lower and lower into the sewer to bad when he realizes it, it will be
to late.

It would be nice and a GREAT EXAMPLE for more Hams like
yourself to not act similar to N8WWM, but to speak up, and
by doing so, not condone this behavior.

However, it is common knowledge that one of the most popular
pastimes of many Hams is to put down and bash anything related
to CB. This happens here, AND on the Amateur bands. It's to bad.
I thought more Hams would be smarter than this. All it really does is
display a hollier than thou attitude that will never entice a CB'er to
enter the faltering Amateur ranks. Of course the main reason for
this bashing is to compensate for inferior feelings. Some how the
misguided think that when you put someone down it's suppose
to bring you up. It's to bad that some have to compensate this way.

I come here for pure recreation. Jacking up an illegal who knows full well he is illegal just is not a hell of a lot of fun. I've had an Amateur ticket for 46 years, an Extra for 25 or so, and commercial tickets. That and a dollar bill will get me a coffee at Mac and Don's. There is a time and place for everything: preaching Christianity on the road between Mecca and Medina and 4-watt 40 channel operation on this newsgripe probably are not the time and place. Repent ye sinners is not a generally effective message.

With all due respect I am not hunting converts. You correctly note below:
>

> CB do not need recruitment. They take proactive steps on their own to a
> path that leads to ham radio.

The path tends to be littered with those who demand repentance and a lot of mea culpas. Like anything else, change springs from dissatisfaction with the present state of affairs. For whatever reason someone decides at one extreme that CB is not where it's at and at the other that he is hanging with a bunch of losers. The latter is illustrated here on a regular basis. There is not a whole lot you, me, or anyone else is likely to do to change or accelerate the process.

>

Forty-five meters has been going on nearly as long as I am old. I don't
think it is necessary beyond pointing out that these are functioning
aircraft freqs to a functioning adult without a sermon is required.
>
> Why look the other way when 25-32Mhz export radios are flagrantly traded
> and sold to unlicensed individuals?

You, as an unlicensed individual (at least under this name), can legally buy
Amateur gear. Putting it on the air is a different issue. Export radios
are by and large jokes; there is a real question who is the gyper and who is
the gypee. Would you have me perform a citizen's arrest or simply yammer
about it?
>
> Why show any respect at all to people who openly violate the rules of

Donnie,

When you "elmered" those folks from CB freeband to ham radio did you hush your mouth and say nothing when they discussed plans to run illegal equipment on the 10 meter ham band? Did you turn shyly away when they recounted with joy, the pleasures of dropping the maul on mud ducks? Did you say "I have no opinion" when they sought to put a high power splatterbox on the air? Did you shrug your shoulders and say "that doesn't concern me" when they set up businesses to market radios specifically designed to operate illegally in the 25 - 32 Mhz spectrum?

Of course you didn't. But you want other hams to do that in rec.radio.cb? Maybe that is your idea of being a ham, sir, but it is not mine. Hams should set an example, as you say, sir. The example being that when they see criminal behavior they call it criminal behavior.

Although I am not yet a ham, I will not stay quiet nor shrink from criticism by a few cretins who do not belong in any radio service, let alone ham radio. My voice will not be silenced.

Doug,
There is nothing wrong with posting your opinion however, there is a point were you begin to bother and harrass people in the newsgroup. If you dont like CB radio and enjoy the hobby of Amateur Radio, thats fine to but dont down other people for not sharing your interests. I have been an amateur radio operator for 11 years, and I do agree that there is no need for people to run 7000 watts to talk locally, but you cannot put down the more honest people on the CB band. I have in my years, met just as many boring knucleheads involved with ham radio as I have with CB radio. I have a handful of friends here that chat locally on the CB band and have no interest in becoming hams, does this mean that because I am a ham and they are not I should deem them enemies? I do occassionally hook up my old Cobra 148 GTL and tune to the local channel to say hi. I have met alot of good people from ham radio and also CB. You have to keep in mind my friend, that ALL radio operators, regardless of privledges, do have feelings and DO share a common interest, the love of radio. I think that if you opened you eyes and truley appreciated your hobby, you would not bash your fellow radio operator, regardless of status. Maybe this helps your already poor esteem. Apparently you have to make fun of others to make yourself feel better. Remeber Carma, what you dish out will come back to haunt you someday. Good luck on your future endeavors.
Glenn- KB2GQZ

I am not on the air and would never conduct myself that way on the air. These guys do all the time. Listen to 11 meters and see. That is my point. You give me crap for acting just like they do...OK Donnie...give those acting this way on and off the air equal treatment...noooooo....never...you are afraid of being slammed back. I think you are being hypocritical.

Why do you continue to make these arguments as if you are a licensed Ham? I'm beginning to wonder if you have ever operated a CB radio. What could possibly have happened to make you so bitter and angry towards CB users? Actually, when I spend a little time thinking about it, you seem to be this way towards everything in general, so why *NOT* CB. It follows...

I live in Burlington - and, particularly once a mile or two from I-85, Ch. 19 is dead.
Even on the Interstate, Ch. 19 traffic is rather light - particularly compared to Virginia's D.C. suburbs. Even driving to and from Greensboro this afternoon, Ch. 19 had rather little on it.
The only places near here where Ch. 19 picks up appreciably are near the big area truckstops - Petro and Flying J in Mebane, Truckstops of America in Gibsonville.

For the past couple of years I've been on this newsgroup, I've seen questions like that posted here. Check Deja News archives. But for some reason Gary, you and a few other HAMs trolled on those postings too (if I remembered accurately). But the newsgroups are for opinions too... I'm sorry. But for the life of GOD, people already know this stuff!!!

Now for the "freebander" and the "hi-powered" CBer, IT IS ILLEGAL!!! And we know this stuff too! Its like the reference used before, if you speed in a car, and you know it's illegal, why do you still speed and deny doing it? It's like the CBer. They know its illegal but they do it anyway. One day the speeding will kill somebody on the highways and the hi-powered CB equipment will cause Cancer in the operator. But GEEEEZ! Some of the folks on here sound like "nagging neighbors." They sound like broken records...

This is just my opinion...

> Why do you continue to make these arguments as if you are a licensed Ham? I'm beginning to wonder if you have ever operated a CB radio. What could possibly have happened to make you so bitter and >angry towards CB users?

Thanks for your inquiry, Beebe.

A) How do you know how a licensed ham would make his arguments? You're "projecting" as the psychiatrists say.

B) Yes, I have operated CB radio. Three guesses as to what I found on the local band.

C) Not angry towards CB users.....just towards illegal CB operators who throw thier illegality in my face. If you remember how this discussion started, it was all about HR2346. Rather quickly, various low-grade intellects in this newsgroup attempted to explain the merits of lawlessness to me. Then a few goat-turds began hurling insults at me. The rest, as they say, is history.

So tell me something about yourself. Are you on Parole or a Work-Release Program?

These illegal operators are intruding on the rights of responsible and
law-abiding citizens, the people that "citizen's band" was intend for.
If they are going to try and drive me off the air by their illegal
acts, I am going to try and drive them back with my legal acts. That
includes the NGs. With the new law, legal operaters can help to clean
up the airwaves with simple DF equipment and a FS meter, and
cooperation with their local law enforcement.

That is just _my_ opinion.

Hey Sparkles? What rights are they "illegal operators" intruding on? Right to privacy? Right to Free Speech? Due Process? What? Talk all you want on the radio. Nobody's doing crap to you.

> If they are going to try and drive me off the air by their illegal

So what you're trying to say is because you were picked on in grade school, you're going to get back at them on someone else? Is that it? Because someone offended you elsewhere, you're gonna take it out on people here who fit the same uh... "modeus operandi", if you will? Some of you posters' here are brand new, what do you know of this group? If you haven't done anything wrong, then you must be in the clear. But if you're going to come here and pose a "nuissance" to everyone, then you might as well take the flames.

Except for stepping on my signal, interfering with my broadcast radio,
TV and CATV reception (yes, cable), and sometimes my computer. As an
electronics tech it always interferes with my work. And even the
police department has had incidents where unfiltered linears trounced
their comm. Then there are the idiots that chase you all over the
spectrum trying to pick a fight "just because it's fun", and because
they are under the mistaken idea that they can hide behind their
microphone. Maybe you don't do those things, but a lot of people do. I
hope you are not defending their actions.

If the newgroup archives went back far enough, you would find that I
have been on the web for well over ten years, and in and out of this
NG for a lot of that time under four different names (as my ISP
changed). You should really think about what you say before you say
it.

>If you haven't done
>anything wrong, then you must be in the clear. But if you're going to come
>here and pose a "nuissance" to everyone, then you might as well take the

I'm glad you mentioned (but misspelled) nuisance. Why don't you spend
a few minutes and look for the legal definition of that word. You
might find a few court cases where illegal radio operators have been
found guilty of causing a nuisance. When you finish that, look for any
cases where a poster on a newsgroup has been found guilty of the same.

Assuming that this is your way of saying that the FCC regs are
insignificant, then perhaps you should enlighten the readers as to
what laws they should and should not obey.

If you don't like a post, ignore it. No one is making you read it. If
you want to argue, that's fine too, it just keeps you off the air a
bit longer. But it is impossible for me to ignore a jerk down the
street with a 1KW penis-compensator. So as long as the illegal
operators continue to whine about getting caught, I will continue to
laugh.

Sparky, ignoring the grade-school banter.

No sir I don't believe I sounded "awfully unfriendly" and well, "dear you",
no where near "bully-ish". Do I come off like that always you ask? Nope.
As a matter of fact I post when I feel I need to post. I'll tell you or
anybody like it is without getting personal. Read the post again. It
wasn't personal. It mentioned his hostility to the group... his personal
hostility to the group from personal experience. I just mearly analyzed his
posting.

> Anyway, you're darn right, some of us posters are brand new. Maybe you
> could explain your little group to us, i.e. what are you guys into, etc.
>

No, its not my group. Its our (yours and mine) group. And what are we
into??? hmmmmmmmmmm... oh crap! RADIO! The last time I checked... Come on
man?

Listen here...

Alot of the old crew here had some pretty heated debates with each other and
with the technically knowledgable Hams' that did and still do frequent this
group. And sometimes the debates are rather friendly in nature but heated
in technical discussion. I liked that. Hell I loved it! Guys would go
days on end about the "102 INCH STAINLESS STEEL WHIP" debate (speak up
fellas... you know who you are). I mean coax debates on formulas and loss,
antenna debates on take-off angles, resonation, blah, blah, blah! Man, you
name it. You just don't know... those were the good old days. Hell it was
just a few months ago to a year!

Nowadays, there is name calling, criminal this, criminal that. "Repent thou
vengeful sinners! REPENT! The end is near!" Give it a rest! There are a
few people here that do post stuff that deal with illegal equipment. SO?

I've been to a forum totally irrelavent to the forums nature but involved MARIJUANA. It was about 4X4's! Why don't you go there and post the relevance of legality. Their excuse was "well if the President can do it, so can I..." attitude! Geeez!

These guys here know their stuff. Not all the "teckis" here are illegals. I know of a few here like Gary Danaher, Richard McCollum, Jay in the Mojave, and a few others I can't remember that have some pretty good info to put out. They, too, got into some heated debates with other regulars to this group. And the last time I checked, they were all HAMS!

I've learnt alot since moving here from Hawaii. I've learnt alot while I was in Hawaii too. But I've learned alot more coming here to this NG and reading, posting, learning and applying some of the stuff from here.

And with a newcomer, like yourself, who is studying to be a Amateur Radio Operator shouldn't be asking questions on personal intentions but on technical intentions. Learn about radio. Not the psychology of a persons posting... And, friend, maybe its something YOU need to work on in the future.

"Thus endeth the sermon..."

Well, after your weak performance as a pop-psychologist, telling me
that I was picked on as a kid, etc, certainly sounded personal. The
truth is that I have never backed down from a fight in my life. But I
guess that isn't "like it is" in your world.

Are you an avid CBer/HAM or just a HAM? You know as well as I do that when it comes down to having a neighbor running illegal equipment and bleeding your stuff, you know that you on your part have to accept the interference as stated on your electronic device. Let me refresh your memory. As quoted...

"This device complies with Part 15 of the FCC rules. Operation is subject to the following 2 conditions: this device may not cause harmful interference and this device must accept any interference received including interference causing undesired operation"

I know how it is when you have someone who chases you around and tries to pick a fight with you. Its not like you have a special situation. As a matter of fact, a gentleman I helped setting up of his base station thought it was funny to key a carrier everywhere I went. "Never cut off the hands that feed you." His station was gone. He tried to pick a fight. Little did he know that the branch of service I am with and the job that I do requires every person to be well vamped in some form of Martial Arts and the ways of Street Fighting. Too bad for his 275 pound useless flesh sporting framework; breathing my precious, smoggy air. His ass... excuse me... butt got stretched up and down the street. And the COPS took his ass away. Not all people will result to personal altercations, but dammit! Take care of your business. Like my old MasterChief friend of mine told me..."Son! Don't just stand there and bitch! Do something about it! It ain't gonna fix itself with you crying over it!" as he put a swift size 11EE boot up my arse. Sometimes I hated that guy...

Anyways...

1484. Re: Newbie Q about 'deadkey' and 'swing' .....

Newsgroup: rec.radio.cb
Date: 2000-12-10 11:46:53 UTC
From: Handy Andy <CodysPC@Iserve.Net>
Message-ID: <ijq63t8qcppkf6kgbd1b3i81v88l2lua0p@4ax.com>
Source record: 62817

Greetings!

Yes, indeed it was a touch of sarcasm in that post.

However, it is a fact that many people just getting into CB radio, overlook the fact that the best sound is obtained by using a stock mike.

Granted, a well-tuned radio will do the job - and quite well. I use the stock mikes on all my equipment that I can locate the stock mike for. And I tune my radios to match that effect.

But then, I have an edge, I have plenty of spare radios to make a radio check unnecessary - I can hear the results myself.

The problem lies in how the new person interpets the very first "radio check" they ask for. They really don't know how they sound until someone gives them feedback.

In 2 falls out of 3 - the return reply is sounds good. But, "How does it sound?" They'll reply, "Is the mike gain turned up all the way?"

"What?"

"Er, it sounds good driver."

Next day the kid goes out to the store and buys that power mike that costs just as much as the radio did.

I can't fault them for that, or you, but the end result is out of all the radios I hear in this neck of the woods, the loudest ones win out, and those use power mikes. I can't deny this. Nor can anyone else.

If you think it was sarcasm, it's more like frustration at the efforts people make to obtain "swing" at the cost of audio quality.

On Sat, 09 Dec 2000 15:23:05 -0500, while the modem was pondering it's navel, sideband <sideband@cac.net> dissertated the following:

Metaphorical joke, not an inference, Gunny.

> The truth is that I have never backed down from a fight in my life. But I
> guess that isn't "like it is" in your world.

But you let guys run you around "...all over the spectrum trying to pick a fight "just because it's fun", and because they are under the mistaken idea that they can hide behind their microphone..." blah, blah, blah... KICK THEIR ASS, GUNNY? Don't back down now! HOOOOOOOOOOOOOOYAAAAAAAAAAAAAAAAAAHHHHH!!! Remember that?

> Maybe you don't do those things, but a lot of people do. I
> hope you are not defending their actions.

Am I? Am I not? That would be the questions... I feel that everyone has the freedom to do whatever the hell they want. In or outside the law. But on the same token, those people who choose to dwell on the outside should also have the conscience to "pay the piper" if they are caught. Its just the nature of the gamble. I speed. I choose to speed. When caught (3 times) I need to deal with the consequences. People drink on duty. I'm sure you have (and don't lie about it... all Marines do it). And if caught, time to see the Platoon Seargent, huh? Take it for Prima Facie... I just think there shouldn't be a need for babysitting.

You have selectively disregarded the first part: Harmful interference.

<snip useless anecdote>

>Anyways...
>
>Have you been ran off this NG before resulting to a different screenname

Another assumption. You are really sounding hypocritical.

>> I'm glad you mentioned (but misspelled) nuisance. Why don't you spend
>> a few minutes and look for the legal definition of that word.
>>
>What are you? An electronic technician or a damned spelling bee judge?

Again, look up the legal definition of 'nuisance'. I pointed out the
spelling to make it easier for you to find. That's ok, I knew you
wouldn't look it up anyway.

>>You
>> might find a few court cases where illegal radio operators have been
>> found guilty of causing a nuisance. When you finish that, look for any
>> cases where a poster on a newsgroup has been found guilty of the same.
>>
>Do you want to be the first? How 'bout your compadre's here who does the

>same?

Is that a threat? I think you will be suprised to know that you can
stop at any time. I am not forcing you to read any of my posts (see
your own statement on 'free will' below). This is a public forum: if
you feel like you are being harassed, that's your problem. If you
would rather not respond, that is your choice. But don't shift blame
because _you_ keep reading and writing.

I would much rather you continued your arguments. Even though they
make you look foolish, I think you might just come up with a good one
. . . eventually.

>> Assuming that this is your way of saying that the FCC regs are
>> insignificant, then perhaps you should enlighten the readers as to
>> what laws they should and should not obey.
>>
>First of all, ASSumptions are the mother of all foul-ups!!! Never assume...
>because you will make an ASS out of U, and make ME look good...

Gee, that's original. At least it might have been when Abbott and
Costello did it. However, if my interpretation of your schoolyard
dribble was wrong, then correct me. But after reading your other
posts, it is clear that you consider yourself justified to disregard
any laws that inconvenience you.

>Never said anything about the FCC regs as being insignificant. Everyone has
>the right to rather CHOSE to obey the law or not.

I suppose that's in the Bill of Rights. I'll rephrase the question:
Which laws do you choose to obey and which do you choose to ignore? I
already know of a couple laws that you seem proud to ignore. What's
your justification?

>I cannot stand here and
>force you to make decisions... you do it your damned self! You're a grown
>man!

The first thing you have said that has made sense.

>> If you don't like a post, ignore it. No one is making you read it. If
>> you want to argue, that's fine too, it just keeps you off the air a
>> bit longer.
>>
>Right back at you. Practice what you preach!

Oh yeah? Well, rubber and glue . . . oops, recess is over.

>> But it is impossible for me to ignore a jerk down the
>> street with a 1KW penis-compensator. So as long as the illegal
>> operators continue to whine about getting caught, I will continue to
>> laugh.
>>
>Free will... boy is that something...

Yes it is. So why do you feel the need to criticize me for exercising
my free will?

>> Sparky, ignoring the grade-school banter.
>>
>An electronic technician named SPARKY... that's scary.

You don't know the half of it.

Before you start foaming at the mouth again, try to put some thought
into what you want to say. If you are going to defend illegal
operation, then at least give a valid argument instead of division,
composition, and ignoratio elenchi.

Sparky

1487. Re: Illegal CB&Ham Radios

Newsgroup: rec.radio.cb
Date: 2000-12-10 12:16:17 UTC

Source record: 62823

Lately all you hear and read is this crap of pro "illegal"
CB and anti "illegal" CB and is becoming the same issue as
on guns pros and anties. There will always be 10 meter
converted down rigs and legal CB expanded rigs by back porch
Mr. fix-it fools who use this stuff to cause grief just as
the killing with an hand gun does.

And as long as you are going have these 10 KW keydowns and
Mr. porch fix-it mod riggers we are going to have nothing
but trouble with back porch Mr. fix-it fools. Far to many
think that a pair of pliers and a screw driver and a 110%
modulation will work magic. Just look at some comments on
here on clipping the mod limiter and how to install a 500
watt linear off the cigarette lighter socket, and those that
believe the tuning a radio/antenna system is only necessary
for splitting hares on TX and RX performance.

The same with a hand gun killing... all you hear is about
that on the news for the next month!!!!
When a CBer of Ham gets busted that is all you hear for the
next month.

WHEN are the good things that come from these things going
to get publicity!???? HUH? In many cases where nature has
taken its toll the only communications will be CB and Ham.
There will be no cell phones or any fancy communications.

I am and into both hobbies and am getting sick and tired of
hearing or reading nothing about negative crap about our...
my... legal and rightful hobbies and the implication of
toughfer rules. Be careful what you ask for or you will get
it and a hell off a lot more.... no rights at all.

This is only true if the transmitted signal is generated legally. If you are creating an illegal signal, then the owner of the Pat 15 device does NOT have to just accept it.

>you are no different.

So true! I have been here since the beginning and I can guarantee that! New
jerks will come they always do. And isn't it funny that cbers really are not at
all interested in hams or going to the many ham groups. Funny because the cb
guys only have this group but there are several ham groups to choose from.
Why is it that cbers are not interested in hams, but hams are interested in
cbers???

How is an illegal operator on triple 5 running no power affecting you? He's not. Q: How is he trying to "run you off the air?" A: Again, he's not. One thing you are failing to recognize is the human nature retribution factor. Not saying it's right, but if you go sticking your fingers where they don't belong you may get them stuck in the cookie jar, HARD! The cops are not going to give your house security protection or follow you to the store or to work, that op that isn't bothering you that you so meticulously went out of your way to hassle may have a beef to settle now. If you wanna play citizen's arrestor, you damn well better have the cajones to back it up. And if you have a family, you're priorities are TWISTED to so callously put your personal crusade above your family's well being.

Medlad...below are all of the police frequencies in Okaloosa (that are not
trunking systems). For your own search abilities...go to
www.perconcorp.com/scripts/foxweb.exe/PROCSUBM?\0\FCC\RS_County\SPECTRUM\SPECTRUM

On this page, it indicates that Okaloosa does have trunking frequencies
assigned but I can't tell you (from N. C.) if they are active, you'll have
to check for yourself...
http://www.perconcorp.com/scripts/foxweb.exe/SRCH_ENG?\0\FCC\RS_County\SPECTRUM\SPECTRUM

The "Radio Service Codes" in the search fields are "PP" for public service
and "YP" for trunked public service

For all of your frequency needs go to
http://www.perconcorp.com/datafinder/index.html

Happy hunting...Rob

Leading by example is the best way to teach. I don't have a "maul" to
drop
on the mudducks in the Pickup, the neighbors don't hear my ham or cb on
the
their stereo. Talk up radio. Nagging about the Ops who run 10KW gets
You
nowhere but alienated. A radio OP I know used to run a hell of a rig in
his truck
complete with 500 watts output, I did tell him "casually" that the
set-up
might cause some problems in the future by that ended the Lecture and we
went on
to more radio talk etc. About 10 months later, he was over to the house
while
in town to talk radio and "sheepishly" admitted that there had been a
problem
with his setup. He had been on a run out West to California and then up
the

West Coast and had keyed up in a Parking Lot in Seattle (He had the not too
sweet experience to learn this was the Restaurant the Local FCC office ate lunch
when he bled into the PA). He lost a 2950, Amp and was delayed for about 2 hrs
to unload while these erstwhile public servants done whatever FCC types do when
distrubed from lunch. By surrendering the equipment he avoided any nasty
surprises and was allowed to go on his way. Talk about being in the wrong place
at the wrong time, Hank's luck is such that he refuses to even buy lottery tickets
for the neighborhood pool! He had to run back to The Louisiana Bayou country
to his lovely Claudia with a MUDDUCK setup that could make me chuckle. He wanted
to make damn sure that thing wasn't over 4 watts and could he get some ham study
material? A local radio shop had the audio tapes for the test since as trucker
ole Hank usually listened to Books on Tape and this would be perfect. A few month
later he happened upon a test session in CA and he was on his way.

Moral of Story-Don't preach, lead by example. I don't look forward to seeing
anyone busted by the locals, I hope reasoning will work as to the why-for and
why-do but if it doesn't then grown people take their own responsibility for
their actions. Good Radio Ops aren't lectured and hounded, they are cultivated
by their own curiosity and desire.

Be an Elmer, not an old sour-puss.

Wrong! That is not how this started. It was a discussion of the bills merits alright, UNTIL certain heathens came in and began to TROLL! Reread and see who began the proverbial name calling, cross posting, and ran in here like bulls in a china shop, multiple and remote postings and infantle-like actions and words.

1514. 100Watt to 1400watt HF 80-10M Amplifiers Sale!

Newsgroup: rec.radio.cb
Date: 2000-12-10 15:20:32 UTC
From: Justin DePolis <justinde@pacbell.net>
Message-ID: <FbNY5.466$It.322037@news.pacbell.net>
Source record: 62948

Hello, I have alot of 80-10 meter amplifiers for sale, after the closing of
a retail outlet, below is a price list:

Mobile Units: (these units require about 30 watts drive, have selectable
power output, and have a 20DB receive pre-amplifier)

KLV 100 watt unit: $89.99
Mirage 300 watt unit: $175.00
Mirage 300 watt unit with thermal protection: $ 225.00

The units below all have thermal protection, and SWR protection:

Mirage 600 watt: $399.99
Mirage 800 watt: $435.99
Mirage 1200 watt: $799.99

Base Models: (all base units 110 volts)

Tube Type: (these units use the 811-A, or EL-519)

KLV 200 watt: $234.99
KLV 400 watt: $434.99
KLV 1200 watt:$699.99

Solid State:

Mirage 300 watt: $599.99
Mirage 500 watt: $699.99

My name is Justin, and I can be contacted at (909) 279-4193,
or at: justinde@pacbell.net
You can also check out my web site for more information:
http://www.geocities.com/ham2way2000/index.html
Quantity pricing available, and prices can be negotiable, thanks, and 73's.
(attached to the post is a picture of the base units)

So what your saying, as a law abiding citizen
I should go chase down every speeder, report
every car with a loud stereo, report my neighbor
watering his lawn on the wrong day, call the police
when the neighbors dog is barking, call the police
when I see someone littering, call the highway patrol
to report a car with neon lights, call the police because
my neighbor has trailer in his driveway for more than
2 days..... The list is endless.....
"When all these things happen we will then be living
in a secure safe place to raise our children"

Nazi Germany!!!!! You and all the other so called Hitler
youth should take a lesson from history.

Mr Voobner
First, I am sorry you have been mistreated while trying to use your CB radio in a legal manor. Most of us know that there are many who prey on folks like you, much like N8WWM does to some here on this ng.(I assume he use to be a former CB bully) I might suggest that you may be a little thin skinned, and may need to toughen up some.
Now regaurding HR2346. I do not condone breaking the law. But I do beleave that HR2346 is a lazy mans cop out. If the right thing were done, this law, HR2346, dersigned to provide enforcement, to help prevent interference, to consumer products such as TVs, VCRs, ect, would not be necessary.
Now Mr. Voobner. You made mention to, "low-grage intellects". So, with that in mind, I would like to ask you what I mean, by a lazy mans cop out ? Do you have a clue as to what I may be talking about? Are you capable of such thought?

I will be looking forward to your comments.
Comments from others are a course welcomed.

ive never once read about somebody advising another cb'er to run a 500 amplifier off a cigarette lighter. i'd love to see that post, and the mod ripping guys dont last long around here either. something tells me either you havent been paying close attention or your only hearing what you want to hear.

>And as long as you are going have these 10 KW keydowns and
>Mr. porch fix-it mod riggers we are going to have nothing

1527. Windsor 23Ch radio info?

Newsgroup: rec.radio.cb
Date: 2000-12-10 18:05:41 UTC
From: Cory Papenfuss <papenfus@juneau.ece.uiuc.edu>
Message-ID: <VBPY5.8167$4h2.137117@vixen.cso.uiuc.edu>
Source record: 62961

Hello all. I recently got ahold of an old Windsor 23Ch radio that seems to work fine. I was just wondering if anyone knew anything about it or links about it (calibration, mods, specs, etc). Doesn't look like there's a single IC on the board, so it's probably a pretty simple set. Just looking for some info.

Thanks,
-Cory

(snip)

....but you do have to admit there is a whale of lot of voodoo here specificly regarding how to wire a radio, the length of patch cables, etc. I don't remember the one about the 500 watt amp via the lighter plug, either (15 amp fuse might have trouble with it), but that wasn't the point of the guy's comment.

Greetings!

On Sun, 10 Dec 2000 04:16:17 -0800, while the modem was ice fishing
with the Mouse, John Amero <" johnaNOï¿½PAM"@island.net> dissertated the
following:

:+> And as long as you are going have these 10 KW keydowns and
:+> Mr. porch fix-it mod riggers we are going to have nothing
:+> but trouble with back porch Mr. fix-it fools. Far to many
:+> think that a pair of pliers and a screw driver and a 110%
:+> modulation will work magic. Just look at some comments on
:+> here on clipping the mod limiter and how to install a 500
:+> watt linear off the cigarette lighter socket, and those that
:+> believe the tuning a radio/antenna system is only necessary
:+> for splitting hares on TX and RX performance.

Can you post those please? I'd like to know, they need all the help
they can get.

I can't prevent someone from being stupid. I can only answer them on
the questions they pose to the N.G. What they do with that information
is entirely up to them.

Sure, some of us hang around out here bashing the winners in the
latest keydown, slamming a personality or two about their ways, or
complaints about engine noise. I can handle that bandwidth.

There's always a sore loser in any group. I'm sure you know what I
mean.

You might be foregetting a point of why some of us lurk around here
still. We try to help those get started in radio.

Since you're a radio fan, all of us are, thats why we are here.

Now, if all you want to do is bash around people, the good ones avoid
you and those like you, like the plague. Just don't make a general
statement that others can interpet as applying to them. Misinterpeted
accusations, It's the fastest way to make the fur fly.

It's all this effort in "one upmanship" that is killing this N.G. and
those USENETS related to the radio hobby.

Some of us walk a fine line on complex issues. It's hard to keep it
simple when dealing with others' emotions.

I'll handle a simple question about radio anyday the best I can, just
keep the politics of the hobby out of it.

Regards!

Greetings!

On Thu, 07 Dec 2000 22:26:12 GMT, while the modem was ice fishing with
the Mouse, aaronvoobner@my-deja.com dissertated the following:

:+> Recent approval of HR2346 indicates that the general public has little
:+> if any tolerance or sympathy for illegal Citizens Band activities,
:+> especially when they infringe on the rights of the average person to
:+> operate a consumer device without being subject to unreasonable
:+> interference.

Yes, I would like to quit hearing "squash" in my radio when I'm
talking to someone else. It's someone elses opinion, does that give me
the right to complain? Can I get the Power company to shut off their
power so the rest of us can talk?

:+> It would seem to me the CB community would be vitally
:+> interested in cleaning up its act.

You know, I've been wondering about that...Where should we start?

:+> Instead, I have observed an
:+> ostrich-like mentality that continues to deny the problem, combative
:+> postures that challenge and defy the law and praise the illegitimate,
:+> and laughable propaganda that attempts to stampede the amateur
:+> community. Especially here in rec.radio.cb discussion of legal vs
:+> illegal should be pursued rather than squelched.

See above...under "squash"...

:+> Honest debate in the
:+> tradition of Mark Fuller should be encouraged. It's your choice. It's
:+> your band. You can clean it up or continue to allow other people to soil
:+> it.

Mark was not very honest. In fact, I mentioned the efforts of Driving
a radio while intoxicated. Do I have the right to rip out the guys
radio from his drunkard hands? I have yet to hear a legitimate answer.

N8WWM answered:
Mom died in 93, and I am on 6 meters...so it wd be channel 2 if any.
Dont forget to sell copies of your book...
I need the money.

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have, with adult supervision, drooled into a dictaphone the following masterpiece of authorship and it is now available at your local book store...Don't miss "Muskrat Love", the heartwarming story of 3 illegal CB'ers who find love and marriage through uniting in hatred for N8WWM, the mean 'ole hammie they wish they were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and into 10 meters, listen to the 3 sweet little CB'ers plot, plan and generally scheme to out flame the greatest flamer of all time. Read about their use of electronic components as aids to their sagging libido's. Learn why no female relatives ever come to visit. Look at the special 13 page photo insert that shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife", by Bill Clinton, and will become recognized as a major literary accomplishment. The trippin' trio have outdone themselves this time, and you have just gotta read it to believe it. Only 29.95 now at your local bookseller or order online at

> Yeah they did, legal stations are exempt from the new laws.

Well, not exactly..... It says *LICENSED* services. What about the legal CBer who happens to live near an "illegal" one? What if the cops mistakenly go to the legal guys' house and issue a citation to him? If this happens, the legal CBer has to take time, funds to prove his innocence. What if his legal station *does* interfere with Widow Brown's TV? Cops visit and "make" him shut it down--even though he has violated NO laws? How is this fair? What if the "interferee" has certain "connections" downtown?

I know, Leland, why you spew so much hatred against CBers. What you *really* want is for there to be NO CB, eh? Would THAT allow you to "climax" in your *dreams* about CBers? Would that finally make you go away? But that isn't going to happen, so you might as well go away anyway!

Jerry

Hello Ben,

Glad you jumped in to save "Beebe Rebozo's" bacon.

Anyhow, you ask me if I know what you mean by a lazy man's cop out. I will answer honestly sir, I have not a clue what YOU mean or what YOU are thinking. (Sorry for the caps, just for emphasis). I only *truly* know what I mean when *I* say things.

My support of HR2346 is based on an interpretation of the facts.

There are folks who will argue that "the FCC should enforce, not the local cops". But I think they know in their heart of hearts that the FCC will never achieve the massive, gargantuan level of funding it would take to enforce CB. So I think they are just blowin' smoke, Ben. They want things to stay the same, linears on the air, no enforcement, etc.

My beef is also with the illegal contingent in rec.radio.cb who get all freaked out by folks like me discussing HR2346. All these mentions of "legalities" makes them feel, well, uncomfortable. Then they get all huffy and start calling names. Then I get blamed for being a troll, notwithstanding that my points are always intelligently made and I attack only if attacked first.

But back to your question, Benny. "Do I have a clue what you're talking about?" you ask. Well, honestly, no. As I said, I can't read your mind, Ben. I look forward to your comments.

Aaron Voobner

Now that we have seen both extremes in this one message, maybe more rational people can find a spot in the middle.

When you get one from the left, and one from the right, playing "Ain't it awful" at the same time in goes from the sublime to the ridiculous

If anything threatens Amateur Radio, it is people who instead of operating what ever mode it is they champion, get on the internet and lament the future of amateur radio.

No Sharky,

Barney-Fife-ism or Nazism is not what this is about.

What I am advocating is that one should take personal responsibility for one's actions. Being a good neighbor to others within the radio spectrum is not all that difficult. It makes sense. It creates a more enjoyable experience for everyone.

You wouldn't pee on a public street simply because you felt the urge. You wouldn't buy a 50,000 watt stereo and blast music at 4AM from your roof. You wouldn't stand idly by while looters robbed your vacationing neighbors house.

Of course you wouldn't.

The fact that there are laws against all of those things is beside the point. It's not about the laws. It's about consideration for others.

The radio spectrum regs are there to protect the rights of others. When you ignore them you are in effect saying to others "I, me, only me matters, screw everyone else".

Asking you to have consideration for other people is hardly what I'd call Nazism.

Always,
Aaron Voobner

Well, I think the jury's still out on that one Noel.......

After an initial surge of new licensees in the USA (I see you're from England) under the No-Code Tech provisions, new licensing (whether with or without Code @ 5wpm) has dropped off to approximately the same levels (or less) that we saw before the advent of a No-Code license here. IMHO, even if we did away with the Code provisions of H.F. licensing (an event that may be coming down the pike in another 5 or so years), we'd see about the same thing........ an initial rush of new applicants for 6 months to a year, and then the same slow decline in overall amateur numbers.

As Fred posted.... the decline in amateur numbers has little to do with licensing requirements and far more to do with other hobbies/distractions available today (computers, internet..etc).

Besides..... the old brigade (your words) are gonna be around for a long time yet... Most of the so-called newcomers to ham radio I've seen are in their 30's and 40's and many seem interested in earning H.F. privileges, 5wpm or not...... the teens of today just have too many other entertainment outlets clamoring for their attention to consider ham radio.... Nintendo, TV, MTV, the internet, pagers, cell phones..etc.... 5wpm Code has almost nothing to do with the lack of teens coming into Ham radio.

Exactly, but these pea brains do not grasp the concept. That is what I have said all along...they think operating illegally is OK because they are self centered, adolescent minded sociopaths.

And when you say "hey, you are wrong to do that" they threaten to shoot you and rape your family.

THAT is what the Nazis were all about. They said: "Do not oppose us or we will kill you"
A bunch of low mental age type crud from lame sissies who can't get ham licenses, that's all it is.
If these individuals are not living proof that more enforcement is needed I do not know what is.

They hate me cuz they KNOW I am right, and threaten me because the law makes them feel threatened themselves. Lame little sissies hiding behind fake addresses and filthy words and threats, that's all it is. "Hammies this and hammies that", thats all I hear on this ng, or should I call it a BG for "bullshit group" or MG for "moron group".

I will be at Dayton this year with a T-shirt that has my call on it.

Congrats elmerpee, you are the second to make my kill file this year. Are you a coward as well, junior? My door is always open here in the 'pile..it's always unlocked, just walk right in, through the front gate, up the path, around the curve to the right..you'll see the light on...cmon..what are you waiting for?..Someone let me know if he returns the invite...From interstate 75 South take 580 west through Tampa to the town of Oldsmar. Hang a left (south) on Forest Lakes Boulevard to SR 590..go left (east) to any street on your right and take it (right) to Bayshore. Go left on Bayshore (east) all the way toward the end. The bay is on your due right. Look to your left right before the power plant, the white gate (that is ALWAYS open) with the green mailbox is mine. Ask anyone you may see in the vicinity that you are here to see the guy with the radios. Where are you, junior?

I NEED A PORK REST!!!!!
It seems that there are more Hams on this newsgroup than on the ham groups.
Why don't you take your discussions pertaining to ham radio, Merit badges
and whatever other ham related topic to the Ham groups? Don't bother with
the excuse that you also use CB too that is no reason for all this ham
related, referenced posts on this NG.
If you CBers would like to move over to one of the Ham groups post your
response here and we will begin some threads on their NG. There BS is
getting as old as their rules and regulations.

Sorry 'bout your mom. If you didn't open your radio and hack it, it wouldn't splatter TV channel 2. You seem to forget I've been in radio for 24 years. I know lots of hams. Some are good, some are bad. It's just human nature for some to be pricks.

Aaron and yourself make good bedfellows. Just watch out for pricks!

> Dont forget to sell copies of your book...
> I need the money.

An admission of brokeness! However, I would like to see the book, since you love me so much to take time from learning CW to better yourself to write a book about me. Still, flattery will get you nowhere because you have nowhere to go.

Someone said you were 32. Wrong! Doug is 42.

Voobner......
I think you missed the point of what Ben was saying...
Essentially, inregards to the recent Bill, he's saying the FCC and the Feds are giving up on any REAL 'centralized' (Federal-Government-led) enforcement... instead they're 'passing along' that mission (SHOULD they decide to take it) to local government... Passing it along WITHOUT funding for enforcement, I might add, as well as restricting any 'local law enforcement' to the letter of the FCC code as spelled out by the Federal Government (which of course leaves the LOCAL authority in the lurch for any 'mis-directed' fines or impoundments).
Most of you should see through this new law for what it is... an excuse for the FCC and the Feds to say they did SOMETHING, when in fact all they did was shift the burden of unfunded enforcement activity to the local level, while keeping the sole authority for same to themselves.
IMHO, I doubt you'll see ANY local authorities rushing to do the FCC's job, while incurring the burden of funding.... NOWHERE in the bill does it spell out the local authority's ability to fund enforcement with fines at the local level... It only allows them to enforce (as enacted locally) pre-existing FCC rules without any funding from the FCC.

Kind'a like your neighbor deciding NOT to shovel the sidewalk in front of his house in the winter and the Township telling you that if you'd like to walk to the corner without having to trudge through a foot of snow that you can do it yourself (but if the mailman falls on an icy spot you left on the nieghbors walk, YOU pay.).

Source record: 62915

On or about Sat, 9 Dec 2000 15:57:21 -0500, "Mike Yetsko"
<joe@user.com>, using the forum rec.radio.cb did say:
:So, power mics DO have some advantages.
:
: A volume control that can be turned down.

That's what the Mic Gain/ Dynamic control is for.
:
: A frequency response that you may like better
: than stock

Stock mic's do stink, yes... But you can't make a radio transmit audio
outside the range it was designed for. Most radios transmit between
300 and 3000 Hz audio, and having a mic that goes beyond that range
does no good for your transmitted signal.. it just forces the radio to
clip those freq's out.

: An output level that MAY be better matched to your
: rig.

Again, this is what the dynamic/mic gain controls are for.

:
:Overall, if you like them, fine.

Again, like I said... it was just my two cents... your mileage may
vary.
:
:Mike

:>
:>... so you're saying that we should allow the commercial production of
:>illegal amplifiers so that we'll have a higher quality of contraband.
:>Hmmm, can anyone out there say "circular logic?"

: exactly...that is how these morons think...

And how do you know how others think?

I personally would like to see the power restriction eased. Require that
any amplifiers be type accepted, and bust people who run dirty equipment,
(just like what happens in the Ham bands - when the FCC feels like it).

Sure, there would still be some that made and sold illegal amplifiers.
However, if the volume of legal amps was high enough, then the price would
be low enough that the illegal manufacturers would not make much money.

N8wwm <n8wwm@aol.comnospam> wrote:
:>It is not a new law!! It is only a bill that gives the local authorities the
:>limited ability to enforce FCC rules if they choose do so.

: That is correct

Yes, and no. It is a new law that allows local authorities to write
laws/ordinances to enforce FCC rules about illegal operation. The part
that is worrysome is that there is no restriction on the penalties
that the local authorities can impose.

Now, this will work fine in some areas, where there are conscientious
and fair Hams who will work with law enforcement to ensure that only
illegal operations will be busted. But there will be many other areas
where the local authorities will either act without proper knowledge
or evidence of illegal operation - or follow the guidance of some Ham
who will do anything to get a CBer busted, regardless of whether they
are obeying the regulations or not.

Three third graders, a Jewish kid, an Italian kid and
=A0=A0=A0=A0a Hillbilly kid
=A0=A0are on
=A0=A0=A0=A0the playground at recess. The Jewish kid suggests that they
play a new
=A0=A0=A0=A0game.
=A0=A0=A0=A0"Lets see who has the largest penis," he says. "Okay." They
all agree.
=A0=A0=A0=A0The Jewish kid pulls down his zipper and whips it out.
"That's
=A0=A0=A0=A0nothing,"says
=A0=A0=A0=A0the Italian kid. He whips his out. His is a couple of inches
longer.
=A0=A0=A0=A0Now not to be outdone, the Hillbilly kid whips his out. It
is byfar the
=A0=A0=A0=A0biggest, dwarfing the other two in both length and girth.
The Jewish
=A0=A0=A0=A0and
=A0=A0=A0=A0Italian kid are stunned and amazed. "Wow that thing is
huge!" they
=A0=A0=A0=A0exclaim.
=A0=A0=A0=A0That night, eating dinner at home, the Hillbilly kid's
mother askshim
=A0=A0=A0=A0what
=A0=A0=A0=A0he did at school today. "Oh, we worked on a science
project,had a math
=A0=A0=A0=A0test
=A0=A0=A0=A0and read out loud from a new book ... and during
=A0=A0recess, my friends and
=A0=A0=A0=A0I
=A0=A0=A0=A0played 'Let's see who has the largest penis."
=A0=A0=A0=A0What kind of game is that, honey?" says the mother. "Well,
me, Sidney
=A0=A0=A0=A0and
=A0=A0=A0=A0Anthony each pulled out our cranks, and I had the biggest!
The other
=A0=A0=A0=A0kids
=A0=A0=A0=A0say its because I'm a Hillbilly. Is that true, Mom?
=A0=A0=A0=A0The Mom replies: "No, Honey. It's because you're
twenty-three"

COLD as ICE and TWICE as NICE.. Mr. ICECOLD BIG APPLE TREES says.. It don't
mean a THING if you ain't got that SWING!!!!!!!

Hello Bill: Nope it ain't like in the Movie "Blues Brothers"

I mean just what I say, "We got both kinds of music Rock & Roll and Country & Western"

I have a old tube stereo receiver in the garage that internal local oscillator drifts. When ya fire it up on a cold morning ya ah listing 2 Rock & Roll, then as it gets warm it drifts lower in frequency and I then hear a Country Western station.

I have loud speakers made for the outside. They are Electro Voice outside speakers. They are just regular speakers, sprayed coated with Scott Guard to protect them from the cold and moisture. I walk all over the antenna range and listen to my tunes all day, and the type of music I listen to is dependent of the radio tempature.

Early in the morning your ah rockin and rollin, then you switch over to Country & Western. Love the old Hank music. Makes ya want to pull a cork and start to ta ah dancin. But the antenna range rules say:

"No pulling the cork and guzzling until all the antenna data is recorded, ah! And the test equipment is covered up and put back.....

Now I must admit that I cheap on occasion, with the music selection. The neighbour likes Country & Western, I like Rock n Roll at times. So I have made a cassette tape with both kinds of music on it, and play it a few times a week. Its got Hank, Patsy Cline, Box Car Willey, Rolling Stones, Beach Boys, and a bunch of other greats.

The great music seems to keep my going at times. Especially when I hit a brick wall with a antenna problem.

Jay in the Great Mojave Desert.

I highly doubt you will be at dayton and i truly don't think you are who you say you are. You know why people want to threaten you because you think you are Mr. Funny Man you have insulted just about anyone and everyone who posts in the NG ham cber or both, you talk shit and talk with no respect like you are some bad ass but you are the one hiding behind the keyboard trying to break balls get a rise or just create bullshit you are as fake and as phony as anyone else is So what you preach about illegal vs legal I think everyone in here is a big Boy and knows right from wrong we don't need to here your pencil geek ass to tell us what we already know I do critisize the others who have continued to give you air time by replying to your jackass replies not to say the others arent equal You seem to conviently leave out that there are alot of hams in this NG who are regulars that have passed every element the FCC has put out for hams so to make an assinine post that they cannot pass the test is nothing more than stupid when you are only a simple no code tech and why do they want to become a ham for those that don't have there licenses already? Because with smacked asses like you running around on the vhf-uhf bands. Well then why havent you upgraded ? because its all you need didnt you say, well who are you to determine what anyone elses radio needs are. You like to come out here and cry well I am only stating the law and you guys want to do this to me and do that to me your posts contain much more than, it is your provoking, name calling hide behind the keyboard, fake/phony using name that is everything you despise, and call people who post here. You are a dick with ears no doubt and I will not be one to get into a long dissertation with you and post ever 5 minutes such as yourself

: Can't say that I totally approve of what you are doing but who asked my
: opinion? What I do know is that I have seen any number of 'outlaws' become
: some very good amateurs with not a lot of help and even less preaching.
: Elmered a fair number myself.

Thank you, Dick. I wish there were more Hams that would post such
courteous and well thought out responses. It would do more to get
CBers to become Hams than all the idiots who think blasting CBers
for illegal operations is going to do anything positive.

I agree with you about the current testing. ANYONE can get an Extra ticket
these days. No real knowledge of electronic theory is necessary, and the
5wpm code test is a joke - although it does fulfill the CW familiarity that
is required by international agreements.

I also agree about the general run of codeless Techs. Most of the ones I
have encountered know less about electronics than some of the CBers that
the feel are beneath contempt. That is not true for all of them - some
are professional engineers who probably are more proficient than most of
the Extra class licencees, but are content with operations above 30 MHz.
These few see no need to upgrade - when they are mostly interested in
experimentation in the EHF frequency bands.

Not much chance of anything happening. No way to prove that this guy made these threats. Newgroup posts are easy to fake. I doubt you even reported him. I am sure your tone and attitude towards people is very different when you are face to face with people. Soon you will get bored with your 15 minutes of NG fame and some other low life will come in to take your place. I have been reading this group for a long time and have seen your type come and go. Your embarassing yourself with every post you make, and surely cannot be proud of your accomplishments in this NG. I actually pity you. Your life must be very shallow and perhaps you are getting a thrill from your actions. I can only hope you stop before you get yourself into trouble.

Good luck you poor man.

Barry D.

I wish to clarify that I do not hate Cbers. I
hate no one. I have only successfully slammed the hell out of those who slammed me. Those who threaten violence are criminals. Period.
I am genuinely apologetic to those legal CBers<damn few> in this ng.
Criminals should not expect an apology for someone being pleased that their chances to be nailed have increased. That attitude is prevalent here, and I frankly don't care what illegals think. Machts nichts. If you are illegal, The average person does not support your activities or your interference with other services.

Thank you Heardallthat. These folks can't take it, that's all. They are a classic example of dishing it out but not taking it, and have been doing it for years. That is why it is stupid to accuse me of starting this crap.

That is the mentality of people who operate in a criminal fashion in any part of their lives. They blame others.

The results may well hinge on those that responsibly operate on the CB band
to begin reining in those that think laws are for everyone else. It is time
for those that normally remain silent, and by their actions allow the
renegades to speak for them, to make their voices heard.

Fred what it will come down to is hams will also try and police the cb band some at any cost, perhaps an old vendetta when he was on the cbband hell I know i have a few people lined up to take down and why not i have been a ham for 22 years I can supply all the help the police in my area need. Or for that matter across my state i have contact with every police dept in my state over 400 i do radar repair work for them so perhaps I will offer my services as a expert in the field . perhaps we can even rattle a few hams cages very easy to set up a covert radio and antenna next to a ham and start wipeing out the neighbors phone, with 1kw into a dipole in a garage, attic, tool shed. This is what can happen and it will only cause undue problems for all on the radio no matter what band you operate on ... Have a good Day

Dear Reader,

One is a niave Limey, asking this one - so please bear with me on this occasion.

I've heard some Americans recently talking about some called MURS that is a new special form of the extension of the CB licence type operation in the US.

Please could someone tell me what is new about is, if I was having my leg pulled about data Tx/Rx on it, if the same could be said for TV images?

If it does exist, please could you tell me where I could find images of the sets that are being used for this in both base, mobile & handheld systems. I would be interested in finding out more about this before visit Stateside later next year.

Yours,

Jim Hawthorne.

1618. Major Dumb strikes again

Message-ID: <3A34318F.A16C561@home.com>
Source record: 63007

MURS is a new unlicensed service which will permit emissions on 151.82, 151.88, 151.94, 154.57, 154.60 MHz with a maximum PEP of 2 watts. You can research the specifics on the net via www.fcc.gov, and look up the Part 95 rules. Voice, data, and imaging are permitted on these discrete frequencies. As far as commercial equipment is concerned, since this is a new service, I am not aware of anything at this time which could be used on these frequencies. No doubt, sdomething will be coming along very soon.

Let's clarify something here. Here is my first post:

>These illegal operators are intruding on the rights of responsible and
>law-abiding citizens, the people that "citizen's band" was intend for.
>If they are going to try and drive me off the air by their illegal
>acts, I am going to try and drive them back with my legal acts. That
>includes the NGs. With the new law, legal operaters can help to clean
>up the airwaves with simple DF equipment and a FS meter, and
>cooperation with their local law enforcement.

Stop jerking off on your keyboard and think about this for a minute.
Illegal operators are intruding on the rights of legal operators. So
why should legal operators not intrude on the usenet conversations of
illegal operators? Different venue, same effect. One difference is
that the illegals can't turn up the power and walk all over the legal
operators. Another difference is that what I am doing is not illegal.

It is only your misperception that I am taking it 'personal'.

Now here is your response:

>Hey Sparkles? What rights are they "illegal operators" intruding on? Right
>to privacy? Right to Free Speech? Due Process? What? Talk all you want
>on the radio. Nobody's doing crap to you.
<snip>
>So what you're trying to say is because you were picked on in grade school,
>you're going to get back at them on someone else? Is that it? Because
>someone offended you elsewhere, you're gonna take it out on people here who
>fit the same uh... "modeus operandi", if you will? Some of you posters'
>here are brand new, what do you know of this group? If you haven't done
>anything wrong, then you must be in the clear. But if you're going to come
>here and pose a "nuissance" to everyone, then you might as well take the
>flames.
<snip>
>. . . But not to take it out on people that do
>frequent this newsgroup and have to hear you spew "the speed limit is 55 and

>you were doing 56. YOU BROKE THE SPEED LIMIT THUS YOU VIOLATED MY RIGHTS
>AND I AM GOING TO PLACE YOU UNDER CITIZENS ARREST, YOU
>CRIMINAL!!!!AAAAAAAAAAAAAAAAAAHHHHHHHHRG!"

I could have considered this to be a personal attack, or just whining. Instead, I continued hoping that you might come up with an intelligent comment. Boy, was I wrong.

A responsible CB operator doesn't use foul language or use his/her
radio in a manner that splatters other channels. I have no problem
with someone using power in the mobile as long as it is clean. Using
power on a base is unnecessary and only irritates the neighbors. I
know full well how much and how far you can electronically disturb
the neighborhood with a 4 watt radio whether it is clipped or not.

Roger beeps are the quickest way to splatter and interfere.

I agree. I would like to see more legal power be made available in the
band, as long as it meets the same tight standards required on other
bands. But the key word here is 'responsible'. There are too many that
can't show responsibility with what little they have been granted.

To the hard-core keydown guys, export radio and amp dealers, swing mod techs, freeband clubbers, radio pirates and HF bootleggers:

I have a solution to all this unpleasantness.

Why not apply to Usenet for your own special little newsgroup? Call it rec.radio.illegal. Since your charter would state that topics are to be strictly confined to illegal aspects of radio, you could post there and be within your rights not to be challenged. Heck, you could even have a moderator to keep everybody in line (or out of line, as it were).

Thinking of you,

27.555 MHZ is assigned to North Island Naval Air Station Base Utility "India".

If you saw a military vehicle with the keys in it and nobody seemed to be using it, would you steal it?

Why steal their frequency then?

Dick,

I'm sure you're a great Elmer - but I have more respect for an Elmer
who'd disapprove a bit more strongly when some bozo announces their
intention to run an illegal 5KW radio station.

Aaron

I for one do NOT condone the activity on my local channel 22. It is not fair for them to splatter the whole band. Why don't you come to Baltimore and make those homey's shut up? I value my life more then you do. I'm not going to tell them how to operate their radio. I would like you to make them operate legally. LOL!

I don't argue with them. I do know several of them. I find by asking nicely, they will turn it down. If you cuss them, they'll crank it up more just to piss you off. You would not make it long as a CB'er here. Come on over and make it your personal crusade to clean up the Baltimore, Maryland airwaves. We're all waiting. Come on.

You are illegal. You operate outside the 40 channels by your own admission.
As for mode changes...anyone operating
FM on the CB band is ILLEGAL.

The only reason I "cause hate and discontent" is you ILLEGALS don't like me
telling ya off, dweeb.

Back under your rock, you swine.

>#3 I never hear anybody complain that I'm causing bleedover.
You wouldnt listen if they did, jerk.

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have, with
adult supervision, drooled into a dictaphone the following masterpiece of
authorship and it is now available at your local book store...Don't miss
"Muskrat Love", the heartwarming story of 3 illegal CB'ers who find love and
marriage through uniting in hatred for N8WWM, the mean 'ole hammie they wish
they were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and into
10 meters, listen to the 3 sweet little CB'ers plot, plan and generally scheme
to out flame the greatest flamer of all time. Read about their use of
electronic components as aids to their sagging libido's. Learn why no female
relatives ever come to visit. Look at the special 13 page photo insert that
shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife", by
Bill Clinton, and will become recognized as a major literary accomplishment.
The trippin' trio have outdone themselves this time, and you have just gotta
read it to believe it. Only 29.95 now at your local bookseller or order online

Find me one post where _I_ said I use illegal frequencies.

> As for mode changes...anyone operating
> FM on the CB band is ILLEGAL.

Just because I said FM is better does not mean I use it.
How do I put FM in a TRC-451 which is the RS version of a
Cobra 146. FYI, it has a uPD2824 chip in it, just like my
PC-122's. Look up that PLL and tell me how to modify it.

Here's a source:

You are making the new group so much more popular by the minute.

The consensus is folks are tired of the bitching, moaning and fighting. Many have written that they will never get their ticket and you are one of the causes. They say that whiny, conceited, self centered types like N8WWM and Voobner have forever tarnished their view of amateur radio. there are 3 members using their callsigns and 4 others I know have their ticket on the new group. Thank you for making the new group THE PLACE TO BE.

Many people with tickets and callsigns are in business selling crappy
amps to CBers. They'll get along fine with you in rec.radio.illegal I am
sure.

Me, I'm going to get my ticket and operate legally. And someday soon I
hope to turn on my CB radio and not hear any overpowered
penis-compensating amplifiers and foulmouthed children.

1682. Re: Davis RF 50OHM LOW LOSS 9913 EQUIV COAX?

Newsgroup: rec.radio.cb
Date: 2000-12-11 05:57:49 UTC
From: MC 10kW Jesus <qsl27@hotmail.com>
Message-ID: <3A346E46.30DD8934@hotmail.com>
Source record: 63066

The connectors for 9913 and LMR400 are unique to 3/8" semi-rigid cables.
That said, you can force a regular RG-8 PL-259 onto it and for 11m (or
lower freq) applications it should work well enough. There are
third-party connectors specifically made for LMR400 and 9913 that are
more cost effective than the Times name brand units.

MC

The Packrat wrote:

And instead you'll turn on your radio to hear old farts talking
about their ailments, surgeries and heart conditions. You'll be
wearing a pocket protector emblazed with your callsign that
will be color coordinated with your embroidered hat.

Don't think that ham radio is a cure-all. You WILL be disappointed.
Both groups will have special people with attitudes like yours.

(My apologies to the few good hams out there.)

>(My apologies to the few good hams out there.)
He apologizes cuz he is such a sorry piece of humanity that he can't even be honest about his ILLEGALITY.

Have fun, criminal.

Special announcement about the 3 special kids!
Folks, you need the following book...Twistie, tnom and Scottiekins have, with adult supervision, drooled into a dictaphone the following masterpiece of authorship and it is now available at your local book store...Don't miss "Muskrat Love", the heartwarming story of 3 illegal CB'ers who find love and marriage through uniting in hatred for N8WWM, the mean 'ole hammie they wish they were 1% equal to in quality of flame issues.
While their Sparkomatic and 2 pill amp combo splashes all 40 channels and into 10 meters, listen to the 3 sweet little CB'ers plot, plan and generally scheme to out flame the greatest flamer of all time. Read about their use of electronic components as aids to their sagging libido's. Learn why no female relatives ever come to visit. Look at the special 13 page photo insert that shows the dried snot on their microphone! This and much, much more.

Folks, this book is on par with the smash hit "I am faithful to my wife", by Bill Clinton, and will become recognized as a major literary accomplishment. The trippin' trio have outdone themselves this time, and you have just gotta read it to believe it. Only 29.95 now at your local bookseller or order online at

No funding, the fine part ($$) is fuzzy however Case Law will allow the
Locals to mirror Fed actions. Will this become a REVENUE ENHANCEMENT
item?
Time will tell. "Training" is to given to the locals by the FCC but the
limiting words are "to the extent possible" so maybe just a guide or
brochure (IMHO).

Hello, I have alot of 80-10 meter amplifiers for sale, after the closing of
a retail outlet, below is a price list:

Mobile Units: (these units require about 30 watts drive, have selectable
power output, and have a 20DB receive pre-amplifier)

KLV 100 watt unit: $89.99
Mirage 300 watt unit: $175.00
Mirage 300 watt unit with thermal protection: $ 225.00

The units below all have thermal protection, and SWR protection:

Mirage 600 watt: $399.99
Mirage 800 watt: $435.99
Mirage 1200 watt: $799.99

Base Models: (all base units 110 volts)

Tube Type: (these units use the 811-A, or EL-519)

KLV 200 watt: $234.99
KLV 400 watt: $434.99
KLV 1200 watt:$699.99

Solid State:

Mirage 300 watt: $599.99
Mirage 500 watt: $699.99

My name is Justin, and I can be contacted at (909) 279-4193,
or at: justinde@pacbell.net
You can also check out my web site for more information:
http://www.geocities.com/ham2way2000/index.html
Quantity pricing available, and prices can be negotiable, thanks, and 73's.
(attached to the post is a picture of the base units)

Justin,

Not only did you post your amplifier sale once, but twice here in the CB newsgroup.

Of course, you are free to post anything you want, but a thinking person might conclude from your actions that you wish to sell these amps to CBers. Is that true?

One thing is for certain. You have not done the same. You have not showed me one lick of evidence that I vouch for illegal operators, you have not expressed enough to veer the illegal op's to the path of righteousness, you have not even showed me any significant evidence that you are a man of "justice" for these hobbies; CB and Amateur. None. You sat here and whined and argued with me. I've "fucked" with you for the past 24 and a half hours and all you did was replied to my post with "no" relevance at all. Just bitched, and that's all you did.

You, Professor of Electronic Engineering, would have gotten my attention if you had something "intelligent" to say upon your first post. But you had to argue with me. Why don't you explain to me how you can better the illegal op's without referring to troll remarks? You can't and you won't! You'd rather see the buggers fry in jail then to help out a fellow "shipmate" all the while bitching about it.

>> Sparky, done and gone!

I think this was the most intelligent thing you've said so far. Once again...

> > Sparky
>

Bill,

I've known of you for sometime here on the NG, and most of the posting you have put up here were interesting. But what I was trying to say was I do not believe that anyone should interfere with their neighbors affairs. "Mind you own business..." is the term to be precise. I wouldn't want you snooping around in my affairs let alone myself in yours. Now if I inferred "lawlessness", "civil disobedience" or "breaking of existing laws", that was not my intentions. My main agenda is to have everyone just get along. Even if they are bad or good Apples. Let them do whatever they want. Eventually, it'll catch up with them.

"SUPAHMAN" (or if that is how it was supposed to be spelled) was right. The "hmmmmmm" and "hawwwwws" gets to a point where no one cares anymore. And thinking of legalities is the last thing on those individuals minds.

"Ease up... the world is not going to shit all at once. It already is..."

This saturday night someone broke into my Suburban. Do to their diminished capacity they made off with the following:
A Magum Deltaforce
A 4-pill that I made
A console that runs the radio equipment
A electronic phone book
A cheap stereo
A EQ that didn't work
My medicine?

What did they leave behind?
Two cellphones
A $400.00 pool cue
8 batteries
An $80.00 cordless drill W/charger
Approx. $400.00 worth of hand tools
The 8-pill and the 32-pill.

While I was scratching my head about the first MoFo, One of my neighbors walks up and says "You need to have your alarm checked it was going off all night". I never said a word to him, my mother would have beeen proud of me.

Everything except the medicine has been listed on my insurance and police report.

Dear Scotty, you are doing what I decided to do in the late 1980's: I decided to leave the garbage channels crowded with shouting, no-receiver CBers, and went to the ham bands. Guess what: the garbage operators were there, too, with their CB callsigns. So, rest assured, if a ham wants to fool you by joining the new group, he will. Cheating machines is real easy. Not to worry about me, though. I wouldn't even consider joining the hi quality Cbers group. Will you do the same for me- no CB on ten or other ham bands? Once again: legal CB is a good hobby, so after the "freebanders" have left this ng, we can talk.

:-) Gary, oh8mfh

What do you know? You don't know shit. Quit hiding behind Deja News punk!
And go back to your radio restore crap business... Sparky!

Brad
